

THE WORLD'S FIRST ZERO CARBON PLASTERBOARD PRODUCTION HAS BEGUN IN NORWAY

Saint-Gobain has announced the start of **100% decarbonized production of plasterboard** at its Fredrikstad plant in Norway. The decarbonization of the manufacturing process was made possible by switching from natural gas to hydroelectric power, thus **avoiding 23,000 tons of CO₂ emissions per year**.

Thanks to the modernization of the plant, improved heat recovery and process efficiency, the **energy consumption of the site has been reduced by 30%**.

The work carried out has also enabled the plant's **production capacity to be increased by 40%**. This reinforces the Group's **leading position in light construction in Norway**, while meeting the strong demand for sustainable solutions to reduce the carbon footprint of buildings.

This **world first** will enable Saint-Gobain to launch a full range of plasterboard products with the lowest carbon footprint on the market in 2023.

This investment of more than €25 million included a €7 million subsidy from the Norwegian state enterprise Enova.

This initiative is a clear manifestation of Saint-Gobain's commitment to reduce its scope 1 and 2 CO₂ emissions by 33% by 2030 compared to 2017, with a commitment to becoming carbon neutral by 2050.

ABOUT SAINT-GOBAIN

Worldwide leader in light and sustainable construction, Saint-Gobain designs, manufactures and distributes materials and services for the construction and industrial markets. Its integrated solutions for the renovation of public and private buildings, light construction and the decarbonization of construction and industry are developed through a continuous innovation process and provide sustainability and performance. The Group's commitment is guided by its purpose, "MAKING THE WORLD A BETTER HOME".

€51.2 billion in sales in 2022
168,000 employees, locations in 75 countries
Committed to achieving Carbon Neutrality by 2050
