

28 June 2024

Predator Oil & Gas Holdings Plc

("Predator" or the "Company" and together with its subsidiaries "the Group")

Total Voting Rights

In accordance with the FCA's Disclosure Guidance and Transparency Rules, as at 28 June 2024, the Company's issued share capital consists of 570,382,865 Ordinary Shares of no par value, each with one voting right. The Company does not hold any Ordinary Shares in treasury. Therefore, the total number of voting rights in the Company is 570,382,865.

The above figure of 570,382,865 should be used by shareholders in the Company as the denominator for the calculations by which they will determine if they are required to notify their interest in, or a change to their interest in, the share capital of the Company under the Financial Conduct Authority's Disclosure Guidance and Transparency Rules.

Notes to Editors:

Predator is operator of the Guercif Petroleum Agreement onshore Morocco which is prospective for Tertiary and Jurassic gas. The current focus of the exploration and appraisal drilling programme is located less than 10 kilometres from the Maghreb gas pipeline. The MOU-1 well drilled in 2021 and the MOU-3 and MOU-4 wells drilled in 2023 have been completed for rigless testing in early 2024. Near-term focus is on supplying compressed natural gas ("CNG") to the Moroccan industrial market. A Collaboration Agreement for potential CNG gas sales of up to 50 mm cfdpd has been executed with Afriquia Gaz. Further drilling activity is anticipated in 2024 to further evaluate the MOU-4 Jurassic prospect.

Predator is seeking in the medium term to apply CO2 EOR techniques onshore Trinidad which have the advantage of sequestering anthropogenic carbon dioxide. The acquisition of T-Rex Resources (Trinidad) Ltd. ("T-Rex") is a first step to realising this objective. T-Rex holds the Cory Moruga Production Licence. Cory Moruga is a largely undeveloped near-virgin oil field of similar potential size to the nearby Moruga West and Inniss-Trinity mature oil fields. The Cory Moruga Production Licence is a potentially significant asset for the Company with the capability of

generating positive operating profits in the near-term. Capital required for staged field development can be implemented potentially utilising operating profits generated from an increasing level of gross production revenues.

Predator owns and operates exploration and appraisal assets in licensing options offshore Ireland, for which successor authorisations have been applied for, adjoining Vermilion's Corrib gas field in the Slyne Basin on the Atlantic Margin and east of the decommissioned Kinsale gas field in the Celtic Sea. The applications for successor authorisations remain "under consideration" by the DECC.

Predator has developed a Floating Storage and Regasification Project ("FSRUP") for the import of LNG and its regassification for Ireland and is also developing gas storage concepts to address security of gas supply and volatility in gas prices during times of peak gas demand.

Further progress for the Mag Mell FSRUP will be dependent on government policy in relation to security of energy supply. A generalised FSRUP concept has now been recognised by the government as an option for security of energy supply.

The Company has a small but highly experienced management team with a proven track record in successfully executing drilling operations in the oil and gas sector and in acquiring assets where there is a potential to generate multiple returns for relatively low and manageable levels of investment.
