NOTES

The objective of Aquila European Renewables plc is to provide investors with an attractive long-term, income-based return in EUR through a diversified portfolio of wind, solar PV and hydropower investments across continental Europe and Ireland. Through the diversification of generation technologies, the seasonal production patterns of these asset types complement each other to balance the cash flow, while the geographic diversification serves to reduce exposure to one single energy market. In addition, a balance is maintained between government supported revenues, fixed price power purchase agreements and market power price risk.
