Pulsar CEO Live Review of 'Box Set' Outreach Initiative Plus Q&A With 'Investor Meet Company'

Pulsar Helium Inc. (AIM: PLSR, TSXV: PLSR, OTCQB: PSRHH), **"Pulsar"** or the **"Company"**), the helium project development company, is pleased to announce that Thomas Abraham-James, CEO, will provide a live review of Pulsar's new outreach initiative: 'The Box Set', Series 1 - The Frontier Of Discovery, with 'Investor Meet Company' on 9 December 2024, 1pm GMT.

Join Pulsar's Co-Founder and President, Thomas Abraham-James, as he highlights key moments from Series 1. Discover what sets Pulsar apart in the industry, why helium is vital to modern technology, and how the Company is positioned to lead in this growing market. Gain insights into Pulsar's journey, upcoming milestones, and the exciting opportunities that lie ahead.

The presentation is open to all existing and potential shareholders. Questions can be submitted pre-event via your Investor Meet Company dashboard up until 8 December 2024, 09:00 GMT, or at any time during the live presentation.

Investors can sign up to Investor Meet Company for free and add to meet PULSAR HELIUM INC via:

<https://www.investormeetcompany.com/pulsar-helium-inc-1/register-investor>

Investors who already follow Pulsar on the Investor Meet Company platform will automatically be invited.

PULSAR HIGHLIGHTS

- **Primary Helium Discovery:** Pulsar is at the forefront of primary helium project discovery and development, with its flagship Topaz project in Minnesota ("Topaz") flowing concentrations that are considered very high by global standards, significantly surpassing the commonly accepted economic viability threshold. Topaz also has a potential value-add product in the form of CO₂, with drilling demonstrating high content.
- **Upcoming Drilling Programme:** Pulsar is on track to accelerate its development plans at Topaz by deepening the Jetstream #1 well in Q4 2024. Pulsar has recently completed upgrades to site access, roadways, and drill pad setup
- **Significant Upside Potential:** The Company has only drilled one well to date at Topaz, not yet reaching total depth. The deepening of the Jetstream #1 well is poised to identify further high-grade helium, and projected to increase flow pressures and rates significantly.
- **Green Helium Focus:** Pulsar prioritises sustainable extraction practices, producing helium without the association of hydrocarbons or water.
- **Technology Driven Demand:** Helium is a critical and scarce resource used in semiconductor manufacturing, high-quality fibre-optic cable production, and MRI imaging. Its unique properties also improve data storage efficiency and mean helium is used by the growing space industry. With increasing demand and significant supply constraints, developing new helium sources is crucial for advancing technology.
- **Strong Management Team:** The management team combines decades of helium industry experience, leading strategic initiatives and enhancing operational effectiveness.
- **Supportive Jurisdictions:** With its projects in USA and Greenland, Pulsar benefits from supportive local legislation and a community-focused approach, significantly de-risking its projects.

On behalf Pulsar Helium Inc.

"Thomas Abraham-James"

President, CEO and Director

About Pulsar Helium Inc.

Pulsar Helium Inc. is a publicly traded company listed on the AIM market of the London Stock Exchange and the TSX Venture Exchange with the ticker PLSR, as well as on the OTCQB with the ticker PSRHF. Pulsar's portfolio consists of its flagship Topaz helium project in Minnesota, USA, and the Tunu helium project in Greenland. Pulsar is the first mover in both locations with primary helium occurrences not associated with the production of hydrocarbons identified at each.

Forward-Looking Statements

This news release and the interview contains forward-looking information within the meaning of Canadian securities legislation (collectively, "forward-looking statements") that relate to the Company's current expectations and views of future events. Any statements that express, or involve discussions as to, expectations, beliefs, plans, objectives, assumptions or future events or performance (often, but not always, through the use of words or phrases such as "will likely result", "are expected to", "expects", "will continue", "is anticipated", "anticipates", "believes", "estimated", "intends", "plans", "forecast", "projection", "strategy", "objective" and "outlook") are not historical facts and may be forward-looking statements. Forward-looking statements herein include, but are not limited to, statements relating to the independent resource estimate for helium and CO₂ at Topaz; the potential of CO₂ as a valuable by-product of the Company's future helium production; the estimated Geological Chance of Success for the Prospective Resources and the Chance of Commerciality of Topaz; the potential for deepening Jetstream #1 and the potential impact of such deepening on the next iteration of the resource estimate; the potential of the Topaz and Tunu projects; and the intended use of proceeds from the AIM IPO; the expected timing to commence drilling; and the potential for future wells. Forward-looking statements may involve estimates and are based upon assumptions made by management of the Company, including, but not limited to, the Company's capital cost estimates, management's expectations regarding the availability of capital to fund the Company's future capital and operating requirements and the ability to obtain all requisite regulatory approvals.

No reserves have been assigned in connection with the Company's property interests to date, given their early stage of development. The future value of the Company is therefore dependent on the success or otherwise of its activities, which are principally directed toward the future exploration, appraisal and development of its assets, and potential acquisition of property interests in the future. Un-risked Contingent and Prospective Helium Volumes have been defined at the Topaz Project. However, estimating helium volumes is subject to significant uncertainties associated with technical data and the interpretation of that data, future commodity prices, and development and operating costs. There can be no guarantee that the Company will successfully convert its helium volume to reserves and produce that estimated volume. Estimates may alter significantly or become more uncertain when new information becomes available due to for example, additional drilling or production tests over the life of field. As estimates change, development and production plans may also vary. Downward revision of helium volume estimates may adversely affect the Company's operational or financial performance.

Helium volume estimates are expressions of judgement based on knowledge, experience and industry practice. These estimates are imprecise and depend to some extent on interpretations, which may ultimately prove to be inaccurate and require adjustment or, even if valid when originally calculated, may alter significantly when new information or techniques become available. As further information becomes available through additional drilling and analysis the estimates are likely to change. Any adjustments to volume could affect the Company's exploration and development plans which may, in turn, affect the Company's performance. The process of estimating helium resources is complex and requires significant decisions and assumptions to be made in evaluating the reliability of available geological, geophysical, engineering, and economic data for each property. Different engineers may make different estimates of resources, cash flows, or other variables based on the same available data.

Forward-looking statements are subject to a number of risks and uncertainties, many of which are beyond the Company's control, which could cause actual results and events to differ materially from those that are disclosed in or implied by such forward-looking statements. Such risks and uncertainties include, but are not limited to, that Pulsar may be unsuccessful in drilling commercially productive wells; the uncertainty of resource estimation; operational risks in conducting exploration, including that drill costs may be higher than estimates and the potential for delays in the commencement of drilling; commodity prices; health, safety and environmental factors; and other factors set forth above as well as under "Cautionary Note Regarding Forward Looking Statements and Market and Industry Data" and "Risk Factors" in the Final Prospectus dated July 31, 2023 filed on the Company's profile on www.sedarplus.ca. Forward-looking statements contained in this news release are as of the date of this news release, and the Company undertakes no obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as may be required by law. New factors emerge from time to time, and it is not possible for the Company to predict all of them or assess the impact of each such factor or the extent to which any factor, or combination of factors, may cause results to differ materially from those contained in any forward-looking statement. No assurance can be given that the forward-looking statements herein will prove to be correct and, accordingly, investors should not place undue reliance on forward-looking statements. Any forward-looking statements contained in this news release and interview are expressly qualified in their entirety by this cautionary statement.
