Investor Presentation via Investor Meet Company

LONDON and PHILADELPHIA - May 15, 2025 - Avacta Therapeutics (AIM: AVCT), a life sciences company developing next generation peptide drug conjugates (PDC) targeting powerful anti-tumor payloads directly to the tumor, will announce its audited preliminary results for year ended December 31, 2024 ("FY24") on May 29, 2025.

Christina Coughlin, Chief Executive Officer and Brian Hahn, Chief Financial Officer will also deliver a live presentation via Investor Meet Company at 11:00 BST on the day.

The presentation is open to all existing and potential shareholders.

Investors can sign up to Investor Meet Company for free and add to meet AVACTA GROUP PLC via:

<https://www.investormeetcompany.com/avacta-group-plc/register-investor>. Investors who already follow Avacta on the Investor Meet Company platform will automatically be invited.

Questions can be submitted pre-event via the Investor Meet Company dashboard up until May 29 09:00 BST, or at any time during the live presentation.

The Company will also post the results presentation on its website at the following page: <https://avacta.com/investors/investor-resources/>.

-Ends-

About Avacta - www.avacta.com

Avacta Therapeutics is a clinical-stage life sciences company expanding the reach of highly potent cancer therapies with the pre|CISION[®] platform. pre|CISION[®] is a proprietary warhead delivery system based on a tumor-specific protease (fibroblast activation protein or FAP) that is designed to concentrate highly potent warheads in the tumor microenvironment while sparing normal tissues. Our innovative pipeline consists of pre|CISION[®] peptide drug conjugates (PDC) or Affimer[®] drug conjugates (AffDC) that leverage the tumor-specific release mechanism, providing unique benefits over traditional antibody drug conjugates.

About the pre|CISION[®] Platform

The pre|CISION[®] platform comprises an antitumor payload conjugated to a proprietary peptide that is a highly

The preCISION[®] platform comprises an anticancer payload conjugated to a proprietary peptide that is a highly specific substrate for fibroblast activation protein (FAP) which is upregulated in most solid tumors compared with healthy tissues. The preCISION[®] platform harnesses this tumor specific protease to cleave preCISION[®] peptide drug conjugates and preCISION[®] antibody/Affimer[®] drug conjugates in the tumor microenvironment, thus releasing active payload in the tumor and reducing systemic exposure and toxicity, allowing dosing to be optimized to deliver the best outcomes for patients.
