Filtronic plc  
("Filtronic", or the "Company")

**New Airbus Constellation Satellites Contract Award**

***Supporting Eutelsat OneWeb's mission of delivering global broadband connectivity***

Filtronic plc (AIM: FTC), the designer and manufacturer of products for the aerospace, defence, space and telecoms infrastructure markets, is pleased to announce a new contract win to develop and supply advanced filter and diplexer assemblies to Airbus Defence and Space, for the supply of additional satellites to Eutelsat OneWeb.

The contract, which will see Filtronic deliver flight sets for payload integration in calendar year 2026, will support the expansion of the Eutelsat OneWeb Low Earth Orbit ("LEO") satellite constellation. This initial contract is of a significant value with potential order flow expected for the remainder of the constellation rollout.

The assemblies will be produced in-house at Filtronic's advanced facility in Sedgefield where the team will also oversee the qualification process to ensure compliance with space environment specifications.

**Further supporting the Airbus-OneWeb collaboration**

Satellites built by Airbus will contribute to Eutelsat OneWeb's mission of delivering global broadband connectivity. Eutelsat OneWeb, formed in 2023 through the merger of Eutelsat Communications and OneWeb, is the world's first fully integrated satellite operator combining geostationary orbit and LEO satellite technologies.

This next phase of 100 satellite production builds on the successful Airbus-OneWeb collaboration, which has more than 600 satellites in orbit.

**Nat Edington, Chief Executive Officer, commented:** *"This contract win aligns with our strategy to expand capabilities in the space sector and places more of our technology on to operational satellite payload systems. We are delighted to have won a second contract with a European space provider, following our announcement on 23 April 2025, highlighting the role we have to play within this high-growth market and broadening our customer base."*
