Concurrent Technologies Plc
(the "Company" or the "Group")

Launch of Bragi in Partnership with EIZO Rugged Solutions

Concurrent Technologies Plc (AIM: CNC), a designer and manufacturer of leading-edge computer products, systems, and mission-critical solutions used in high-performance markets by some of the world's major OEMs is proud to announce the launch of Bragi, the first NVIDIA graphics card in its product line up. This product has been developed by Concurrent's partner EIZO Rugged Solutions, and will be marketed as "Concurrent powered by EIZO Rugged Solutions" for promotion to global defence and industrial markets.

Like many of the Company's computer products, this GPGPU (General Purpose Graphics Unit) conforms to the 3U OpenVPX architecture and can be utilised in the same systems solutions as other products in Concurrent's modular high-performance portfolio.

This GPGPU uses NVIDIA's very latest Blackwell architecture, and is built for applications requiring edge processing, with up to 1,824 AI TOPS (Trillions of Operations per Second), SOSA® (Sensing Open Systems Architecture) alignment, and MIL-STD-810 (Military Standard) compliance.

Miles Adcock, CEO, said: *"We have developed our partnership with EIZO Rugged Solutions over many years, and are delighted that we have the rare ability to sell their flagship AI enabling product as one of our own. In addition to enhancing our portfolio, this is highly reassuring to customers who wish to be confident that the elements of a system will work flawlessly together. We have invested in the technical ability to deeply integrate and support the GPGPU's from EIZO Rugged Solutions as part of our ongoing mission to provide customers with the very latest technology"*
