("1Spatial", the "Group" or the "Company")

**Landmark 1Streetworks contract with UK Power Networks**

1Spatial, (AIM: SPA), a global leader in Location Master Data Management (LMDM) software and solutions, is pleased to announce it has signed a £1m SaaS contract with UK Power Networks enabling use of the 1Streetworks platform over the next 15 months, with a one-year extension option.

UK Power Networks has 190,000km of cables and undertakes approximately 40,000 works on the highway each year across London, the South-East and East of England, to maintain safe and reliable power supplies to 20 million people. Over the past year, 1Spatial has engaged with UK Power Networks to realise significant benefits from automating the production of a proportion of the traffic management plans, diversion routing and asset inventory lists, associated with these works.

Over the next 15 months, the roll-out of 1Streetworks is expected to be used to plan and initially deliver up to 30% of this volume of works, extending use of the platform both geographically, across London, the South East and the East of England, as well as into new teams, looking at network faults and reactive works.

**Delivering tangible results**

This expanded contract builds on the successful use of 1Streetworks across various operational teams within the Southern region, where it helped to enhance operational efficiencies as well as key performance measures.

The 1Streetworks SaaS solution could enable UK Power Networks to deliver a 39% reduction in road closures, improve Average Time To Quote and Average Time To Connect, benefiting its customers.

Within the 1Streetworks SaaS solution, a plan can be created in minutes that complies with the high levels of safety and accuracy required by legislation, as well as reducing the length of disruption to traffic. The platform also enables collaboration across the supply chain, further reducing the labour-intensiveness of streetworks design plans.

**Claire Milverton, 1Spatial CEO, said** "We are delighted to agree this landmark contract with UK Power Networks. It is testament to the demonstrable value provided by our innovative 1Streetworks solution. We are proud UK Power Networks have recognised the significant efficiency savings, improved customer services and a reduction in road closures that can be achieved. We look forward to continuing to work with UK Power Networks to unlock further value across their network.

*"We believe the benefits of the UK Power Networks programme has value for all electricity, gas, water and telecommunications companies and has the potential to become a blueprint for the organisations who work in, or coordinate, essential work in the highway.*

*"This clear commercial validation and growing industry awareness is supporting a steadily growing pipeline, which we are focused on converting."*

**Richard Boissieux, head of streetworks at UK Power Networks, said:** "We are delighted to extend our partnership with 1Spatial. The 1Streetworks platform has been highly successful in streamlining traffic management plans, enabling better communication with customers and highway authorities and

*improving the speed and accuracy of streetworks. We now look forward to seeing those benefits more widely across our network."*
