## Cloudbreak Discovery Plc

('Cloudbreak', or 'the Company')

### Site Visit Underway at Crofton Gold Project, W.A.

**Cloudbreak Discovery Plc (LSE: CDL)**, a London Stock Exchange Main Market listed company, is pleased to announce that a helicopter-supported site visit is underway at the Crofton Gold Project ("Crofton"), located 120 kilometres east-southeast of the famous Australian gold mining centre of Marble Bar and 75km northeast of the mining centre town of Nullagine in the Pilbara region of Western Australia. **Figure 1**.

The maiden site visit by Cloudbreak will review work completed by previous companies at Crofton, where bonanza-grade gold results, up to 253g/t gold and 215g/t silver (As released to the market on 9 October 2025), with visible gold have been recovered. The site visit will also expand rock chip sampling across the project.

Historic gold production from the area from 1901-1910 averaged 150 g/t gold.

*Tom Evans, Cloudbreak's MD, commented; "It is great to be on the ground at Crofton for the Company's maiden site visit and to be looking at where the bonanza grade gold samples up to 253 g/t were taken and historic gold production averaged 150g/t. These grades are exceptionally high and the site trip will validate and expand on previous work completed, where delineation of multiple trends with strike lengths of over a kilometre on the tenement give the Company a vast number of high priority exploration targets. This incredibly exciting gold project in Western Australia adds significantly to our growing portfolio of gold assets in a period of record gold prices and resurgent silver prices."*

#### About the Crofton Gold Project

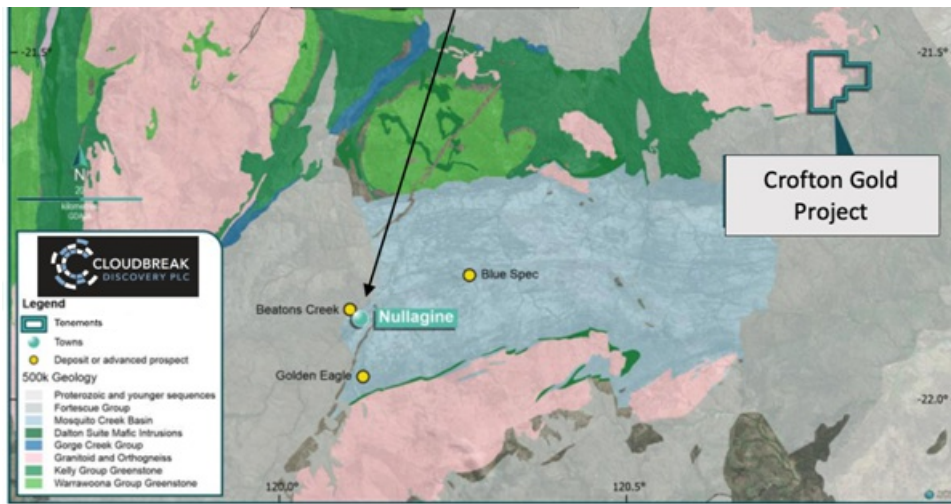

Crofton hosts a large area of hydrothermal alteration within the Yilgalong Granitoid, associated with a suite of prominent quartz veins. Historical exploration has been limited to surface sampling programs of stream sediment, soil and rock chip sampling.

The Company will hold a 100% interest in the Crofton property, which consists of one exploration licence application E45/6690 covering 57km<sup>2</sup> (**Figure 1**). The Crofton licence covers much of the Boodalyerie Mining Centre, which has recorded production from 1901 to 1910 of 588.4 ounces gold from 122 tonnes of ore at a reconciled average grade of 150g/t gold.

#### Future Plans and Assay results update:

The Company currently has a maiden site visit underway that will assess and validate previous work at Crofton. In the near future, the Company plans to conduct detailed geological mapping over the geochemical anomalies identified from previous work, and move towards defining drill targets.
