**URU Metals Limited**

("URU" or the "Company")

**Zeb Nickel Project**

**Release of Updated Corporate Presentation**

URU Metals Limited ("URU" or the "Company") is pleased to announce that a new corporate presentation for the Zeb Nickel Project is now available on the Company's website at: <https://urumetals.com/> and viewable via the link:

[http://www.ms-pdf.londonstockexchange.com/ms/7186K\\_1-2025-12-8.pdf](http://www.ms-pdf.londonstockexchange.com/ms/7186K_1-2025-12-8.pdf)

**Corporate Presentation Highlights:**

- Confirmation of a magmatic conduit system linking the Uitloop intrusions.
- Identification of seven high-priority drill targets supported by coincident gravity-magnetic-electromagnetic anomalies.
- A refined geological model and updated cross-section defining the Project's stacked mineralised zones and extended potential.
- Recognition of untested nickel-rich horizons that were not intersected in historical drilling.
- Strengthened evidence for Platreef-style Ni-Cu-PGE mineralisation within Zone 2.

The updated presentation provides enhanced detail on the Project following the integration of the final airborne geophysical results (gravity, magnetic and Spectrem electromagnetics), together with an updated geological model and revised schematic cross-section. These updates collectively improve the understanding of the Project's nickel sulphide potential and significantly refine the technical foundation for the next phase of exploration.

The data highlights a magmatic conduit system linking the Uitloop ultramafic bodies and defines multiple high-priority drill targets, several of which are supported by coincident gravity-magnetic-electromagnetic anomalies and remain untested. The presentation also outlines the Project's exploration strategy, geological interpretation updates, and the upcoming work programme designed to unlock further resource potential.

CEO John Zorbas commented:

*"We are very pleased to release this updated presentation, which consolidates two years of geological and geophysical work into a comprehensive technical package. The integration of the airborne gravity, magnetic, and EM data materially enhances our understanding of the Zeb Nickel Project and highlights several compelling sulphide targets that have never been drill tested. These results position the Company to advance into the next phase of exploration with greatly increased confidence."*
