

PRESS RELEASE

EDF power solutions UK appoint METLEN to lead construction of Longfield Solar Farm

Athens, Greece / London, United Kingdom - December 17, 2025 -[METLEN](#) (RIC: MTLN.L, Bloomberg: MTLN.LN, MTLN.GA, ADR: MYTHY US) has been appointed by EDF power solutions UK the engineering, procurement and construction (EPC) contract for its 400MW Longfield solar farm, one of the largest solar projects in the UK.

The appointment comes at a key time for the project as procurement ramps up ahead of construction getting underway in early 2027 with the target of completion in 2030.

The scope of works awarded to METLEN includes comprehensive design, site surveys, procurement and delivery of all materials, and the full civil, mechanical, electrical, testing and commissioning works required for the construction of the solar facility in line with National Grid Code Compliance and DCO requirements, excluding grid connection works.

EDF power solutions and METLEN are both committed to maximising opportunities for businesses within the Essex region and plan to hold a local supply chain engagement day in the spring. In total, Longfield solar farm is estimated to be generating enough power to provide electricity for the equivalent of approximately 130,000 households, while helping avoid an estimated 60,000 tonnes of CO emissions per year.

This will build on the work that EDF power solutions is already undertaking in the region to encourage more young people to take up a career in renewable energy. Destination Renewables, an education programme developed jointly by EDF power solutions, DP Energy, Pembrokeshire College and Pembrokeshire Coastal Forum, has been in place at Colchester Institute since the start of the year and provides opportunities for students to hear directly from those working in the clean energy industry.

Matthew Boulton, Director of Solar, Storage and Private Wire at EDF power solutions UK, said: *"We are delighted to partner with METLEN Energy & Metals on the Longfield solar farm project. This is a significant step forward for the delivery of our first DCO project. Together, we are not only building important new UK renewable energy generation but also strengthening the future of the local economy through the creation of opportunities for local businesses."*

With a strong international footprint and deep expertise in complex energy projects, METLEN, a global energy and industrial company, is recognized as one of the most reliable developers in the UK. METLEN now has more than 95 renewable energy projects (solar and BESS) in the UK and Ireland completed or at various stages of execution or development. The total installed power of the solar parks stands at more than 2.3GW, while the energy capacity of the battery systems is over 1.3GWh.

Nikos Papapetrou, Chief Executive Director Renewables & Energy Transition Platform, of METLEN commented on the agreement: *"We are proud to partner with EDF power solutions on a project of this scale and strategic importance for the UK's energy transition. METLEN has a proven record of executing solar projects in more than 30 countries, in all five continents, often in challenging environments, consistently meeting the highest technical, environmental and delivery standards."*

Once operational, Longfield solar farm will support the UK's transition to renewables following the award of a Contract for Difference in auction round six. Longfield will also help one of the country's largest energy consumers in reducing their operational emissions as the remaining electricity generated will be supplied to Transport for London after a Corporate Power Purchase Agreement was signed in July this year.

METLEN:

METLEN Energy & Metals Plc (METLEN) is the parent company of the international industrial and energy group, a leader in the metallurgy and energy sectors, focused on sustainable growth and the circular economy. METLEN is a benchmark in competitive "green" metallurgy at both European and global level, operating the only fully integrated bauxite, alumina and primary aluminium production plant in the European Union, with privately owned port facilities. In the energy sector, the Company provides integrated solutions through the implementation of thermal and renewable power generation projects, electricity distribution and supply, as well as investments in network infrastructure, battery storage and other green technologies. METLEN operates across five continents and in more than 40 countries, employing over 9,000 people worldwide and applying a fully synergistic model across its metallurgy, energy and end-to-end energy project development activities.

METLEN Financial Highlights

The Company has its primary listing on the London Stock Exchange and secondary listed on the Athens Stock Exchange and is a constituent of the FTSE 100 Index. In 2024, METLEN reported consolidated revenue of €5.68 billion and EBITDA of €1.08 billion, up 7% year-on-year, with net profit of €615 million. Adjusted net debt stood at €1.78 billion, with a Net Debt/EBITDA ratio of 1.7x, reflecting strong financial resilience. METLEN is rated by leading international sustainability and ESG agencies, holding the unique Greek position in the Dow Jones Best-in-Class Emerging Market index, and distinguished across MSCI, Sustainalytics, ISS Quality score, ISS Corporate Score, S&P Global ESG, LSEG, CDP, FTSE Russell, ESG Book, EcoVadis, Bloomberg and IdealRatings.

EDF power solutions UK and Ireland, Tel. +447920070832 | E-mail: peter.hess@edf-re.uk

EDF power solutions UK

EDF power solutions UK and Ireland is a subsidiary of the EDF Group, one of the world's largest low carbon electricity companies. Our goal is to have 10 GW of operational projects by 2035 to support the UK and Ireland in moving to clean power and to do whatever we can to ensure communities and businesses enjoy access to a diverse, reliable, and affordable low-carbon energy mix for decades to come.

Previously known as EDF Renewables UK and Ireland, EDF power solutions UK and Ireland has an operating portfolio of 50 renewable energy sites including solar, battery, onshore and offshore wind (together totalling more than 2GW). We are providing much needed affordable, low carbon electricity across the UK and have an expanding portfolio with almost 15GW of projects in planning and development. In addition to Longfield, EDF power solutions is also developing the following DCO projects - Gate Burton and Springwell in Lincolnshire, Rosefield in Buckinghamshire and South Brooks in Kent.
