

新希望六和股份有限公司

英文年报披露说明

近年来中国资本市场持续加大对外开放力度，鼓励境外投资者更多参与。新希望六和股份有限公司（以下简称“公司”）为更好地服务越来越多的境外投资者，首次披露英文年报，旨在向境外投资者更详细地展示公司的经营与财务信息，传递公司的投资价值，不断提升公司的国际化水平。

本次英文版年报由公司董事办主持完成，共翻译转换 24 余万字中文。翻译过程涉及众多农牧行业和财务会计的专业术语，公司已努力确保原文内容得到准确的传递，但仍可能会存在不恰当之处。

本报告分别以中、英文编制，在对中、英文文本的理解上发生歧义时，以中文文本为准。

欢迎本报告的读者在发现问题或难以理解的内容时，发邮件至公司董事办邮箱（000876@newhope.cn）询问与交流，也帮助公司提升后续版本的翻译质量。我们诚挚地欢迎您的批评、指正与建议。

New Hope Liuhe Co., Ltd

Disclosure Statement of the English Version Annual Report

In recent years, China's capital market continues to open to the outside world and encouraged foreign investors to participate in the financial market of China. New Hope Liuhe Co., Ltd. (hereinafter referred to as "the company") discloses first annual report in English to better serve foreign investors, and aims to comprehensively show the company's business situation and financial information, convey the investment value of the company to foreign investors, and continuously improve the company's international level.

The English version of the annual report was carried out by the company's Office of the Board of Directors, with a total of more than 240 thousand Chinese characters translated. As the annual report involves many professional terms translation of agriculture industry and financial accounting, the company has made great efforts to ensure the accurate translation of the original content, but there may still be some inadequacies.

This report is prepared in Chinese and English respectively. In case of any ambiguity in the understanding of the Chinese and English versions, the Chinese version shall prevail.

Readers of this report are welcome to send an email to the company's Office of the Board of Directors (000876@newhope.cn) to inquiry and communicate if encountering problems or incomprehensible contents, and at the same time help the company improve the translation quality of subsequent reports. We sincerely welcome your criticism, correction, and suggestions.

NEW HOPE LIUHE CO., LTD.

2019 Annual Report

2020-36

April 2020

Section 1 Important Tips, Table of Contents and Paraphrase

The board of directors, board of supervisors, directors, supervisors, and senior managers of the company shall guarantee the authenticity, accuracy, and integrity of annual report contents, without false records, misleading statements or important omissions, and shall bear the joint and several legal liabilities.

Statement of the company leader Chang Liu, the leader Shuhua Wang in charge of accounting work, and the leader Jing Chen of accounting organization (accounting supervisor): Guarantee the authenticity, accuracy and integrity of financial report in the annual report.

All the directors have attended the board meeting of reviewing this report in person.

The 2020 annual financial budget, business plan, and business objectives of the company do not represent the profit forecast of the company of 2020. Whether realizing depends on multiple factors such as change in market conditions and effort level of management team, and there are great uncertainties. The investors are requested to pay special attention.

The company should comply with the disclosure requirements of *Industry Information Disclosure Guideline No. 1 of Shenzhen Stock Exchange – Listed Company Engaged in Livestock and Aquaculture Business*.

I. Epidemic disease and natural disaster risk.

The animal epidemic disease is the main risk faced in the livestock industry development. There are three kinds of risks arising out of the occurrence of epidemic disease. First, the occurrence of epidemic disease is likely to result in the death of livestock, and leads directly to the reduction in yield and drop in price. Second, the occurrence and prevalence of epidemic disease on a large scale easily influence the consumer psychology, lead to the contraction in market demand, and also influence the feed production and operation. Third, after the outbreak of some infectious epidemic diseases endangering the public health security of the masses, the government will take measures involving barring traffic to prevent and control the spread of epidemic disease. These epidemic prevention measures will seriously hinder the transportation of feed, animal healthcare products, and live livestock, and the workers returning to work, and have a great influence on the production and operation of breeding industry. In addition, the outbreak of infectious epidemic diseases will make most catering enterprises stop doing business, some agricultural product markets shut down, and consumers reduce the shopping activities outdoors, and lead to the decline in meat demand and consumption.

For example, the African Swine Fever with enormous influence on the entire industry broke out in 2018. The African Swine Fever was characterized by long incubation period and high mortality after onset of the disease, and the effective and reliable vaccine has not yet been developed successfully. It was also the concentrated outbreak on a large scale in China for the first time, and the large-scale breeding enterprises or small retail investors lacked the effective prevention and control measures at the onset of epidemic disease outbreak, so they suffered losses to varying degrees. The data released by National Bureau of Statistics showed that the swine livestock on marketing of China in 2019 fell by 21.6% on year-on-year basis, and the swine livestock on hand of China at the end of 2019 fell by 27.5% on year-on-year basis.

Furthermore, the COVID-19 raging at the beginning of 2020 also brought severe challenges for anti-risk capability of livestock breeding industry chain in China. The anti-epidemic measures such as closure of village and road, delay in returning to work, suspension of live poultry trading, and shutdown of slaughter house led to unavailable feed of livestock in the farm and livestock of farmers, newborn livestock nowhere to sell, slaughtering livestock unable to slaughter, and breeding production activities difficult to develop normally. The COVID-19 also forced the new pig farms of pig farming enterprises generally under the shutdown state, and decline in the enthusiasm of live pig supplement, and finally hindered the recovery process of live pig capacity.

For the natural disaster risk, the feed and slaughter are closely related to planting and livestock breeding industry, so the

natural disasters involving temperature anomalies, drought, flood, earthquake, hail, and snow disaster have an adverse impact on the industry operation and development. The natural disasters in production base of the company and surrounding areas may lead to major damage to production facilities or equipment, and the natural disasters and extreme climate may also propel the rise in price of some raw materials. For example, the serious flood disaster broke out in many places of South China in summer of 2016, to adversely affect the production and operation of the company and farmers.

Risk response measures: In the face of animal epidemics, the livestock farm planned and constructed by the company breeding base is the normalized and standardized farm equipped with professional breeding technology, and takes strict anti-epidemic measures, to prevent and control the occurrence of epidemic diseases well. The company also summarizes some experience and measures responding to major epidemic diseases by years of exploration and accumulation, and eliminates the influence of various epidemics by adjusting the product structure properly, improving the product quality, making deep market development actively, and reducing the costs. In addition, since 2014, the company has built the animal healthcare protection laboratories in various areas, created the cloud animal healthcare protection system, implemented the monitoring and early warning of epidemics and diseases in real time, and guided the technicians to serve the farmers better. In 2017, the animal health protection center was further separated from the feed technical team, to enable it to focus more on veterinarian and disease surveillance, prevention and control, and research and development. In particular, in view of African Swine Fever outbreak in 2018, the company set up the special working group of prevention and control the first time, formulated the all-round and all-system prevention and control measures, comprehensively included the prevention and control measures in multiple links such as existing self-run pig farms, cooperating fattening farms with peasant households, new pig farms of the company, pig feed production units, and internal animal healthcare protection laboratories, and accomplished prevention and control starting from the source of animal nutrition. At the same time, the company took an active part in the industry exchange, and explored more effective prevention and control methods together with the peer enterprises. It proved that the bio-safety and epidemic prevention system of the company could withstand the challenges of African Swine Fever, and the indicators involving industry leading level of both live pig survival rate and market rate.

In the face of COVID-19 and other epidemics with blockade and quarantine as main anti-epidemic measures, the company has explored a set of effective measures to quickly reduce the impact and influence of epidemics on the enterprise. Firstly, quick response. The company establishes the epidemic prevention and control leading or supervision group of business unit in headquarters and at different levels the first time, in charge of organizing, guiding and supporting the epidemic prevention and control work of the whole company, formulating and implementing various prevention and control systems, and coordinating and carrying out the emergency disposal. Secondly, according to epidemic prevention and control requirements in different areas, on the premise of putting emphasis on overall situation of prevention and control, based on proper protection, it actively communicates with the government at all levels, coordinates with the transportation of goods involving livestock products, and raw and auxiliary materials of feed and products, transacts the vehicle permit, and implements the green channel policy unveiled by the government at all levels. Thirdly, accomplish the procurement, feed preparation, production and supply of feed factory by the region-wide coordination, strengthen the internal support of poultry industry integration, arrange the employees to return to work and produce quickly and orderly, assist the guarantee of daily supplies of the country, adjust the food industry strategy dynamically, increase the supermarket channel and online channel sales, turn risk into opportunity, and accelerate the channel upgrading and industrial transformation. Fourthly, combining with the practice of the company and the industry, the company compiles the epidemic prevention and control manual, publishes the documents such as technical guidance on employee prevention and control and quarantine, and guidance on engineering management and control under epidemics, and makes the epidemic prevention arrangement specifically on account of situations of different industries and different areas. The company gives full play to superiority of international development, purchases the epidemic prevention materials globally, and strengthens the safety protection of employees.

For the response measures of natural disasters, the company fails to eliminate the possibility of suffering from major natural disasters in the areas of the subordinate companies, but the status of extensive business layout of the company both at

home and abroad ensures the natural disasters in a specific area is against the significant influence on overall business of the company. At the same time, the company can take the concentrated advantages, allocate the funds, raw materials, equipment, and staff timely and effectively under strong support of the government, resume the production as soon as possible, and reduce the losses arising out of natural disasters.

II. Risk of fluctuations in price of feedstuffs.

The cost of main feedstuffs for feed production accounts for more than 90% of total cost of feed production. In the past, the proportion of feed business in the company revenue is larger. However, the feed industry generally adopts the pricing method of cost plus, and the fluctuations in price of feedstuffs can be partly transmitted to the downstream breeding link, to relieve the pressure arising out of the rise in price of feedstuffs. With larger and larger proportion of livestock breeding business in the company revenue, the rise in price of feedstuffs will have greater and greater influence on the whole company.

Since 2018, the cost of feedstuffs has been turbulent and rising. With the substantial reduction in soybean production of Argentina, the global phased supply of soybean has been tightened, multiplied by the impact of Sino-US trade friction, and the domestic spot market of soybean meal jumped by phases with intensification of market fluctuations. The domestic corn price showed the trend of rising before falling, and the additive (amino acid) had a larger drop. However, the fluctuations in price of feedstuffs in 2019 also presented the opposite pattern. The overall trend of average price of corn in China in 2019 was falling before rising, and falling rebound after turbulent consolidation, and the trend of rise and fall was roughly opposite to that of 2018. For the price of soybean meal in China in 2019, due to high yield of soybean globally, Sino-US trade relations constantly releasing good signals, and continuous decline in swine livestock on hand under pressure of African Swine Fever, the domestic spot market of soybean meal continued to fall, with the annual drop of more than 10%. The COVID-19 influenced the work resumption of the enterprise in 2020, to make the price of some feed additives jump substantially in the short term.

In addition, as an important part of feedstuff trade, Sino-US economic and trade relations are very likely to be in the state of ups and downs all the time in future, to enable the trade of bulk agricultural products between China and the US to be influenced continuously. The relations between both parties in 2019 were somewhat eased, but it also led to great uncertainty in international trade of feedstuff in future, and the risk of fluctuations in price still exist. Moreover, under the background of African Swine Fever existing in China for a long time, the feed enterprises will reduce some high risk feedstuffs for the safety of animal nutrition, such as usage of corn, pig blood, and pig bone meal, to make the demand for raw materials focus on other types of raw materials, which may lead to rise in price of such alternative raw materials.

Risk response measures: The company is the domestic largest feed enterprise, and possesses the scale advantages and definite right of speech in the raw material purchasing. The company reorganized and optimized the raw material purchasing system in the first half of 2017, carried out the supplier system sorting actively by new management platform, established the strategic partnership with many domestic and overseas excellent raw material suppliers, developed the supply chain financing in multiple forms actively, and optimized the purchasing cost and relevant financial expenses. Moreover, the company completed the adjustment of organizational structure and reorganized the feed business at the end of 2018, to make more unified and harmonious management of raw material purchasing work of the whole company. The above measures help the company further enhance the ability in raw material purchasing and reduce the adverse effect arising out of fluctuations in price of feedstuffs. In 2019, the company continued to propel the above transformation measures in depth, delivered a satisfactory report in the aspects of central purchasing of raw materials, strategic purchasing channel optimization of partners, corn acquisition with origin in the northeast, and purchasing model upgrade, and realized the greater purchasing value against trend.

III. Risk of fluctuations in price of livestock.

The finished products of livestock and poultry breeding of the company mainly involve baby chick, baby duck, white-feathered chicken, white-feathered duck, breeding pig, piglet, and hog. Especially the pig breeding business of the company has developed rapidly since 2015. In 2019, the sales volume of live pigs was up to 3,550,000, and the sales volume of

commercial generation chickens and ducks with self-support and entrusted breeding also exceeded 300,000,000, to enable the livestock and poultry breeding to have a larger proportion in overall revenue and profit of the company. In the future, with the explosive growth of breeding quantity of the company, the livestock and poultry price will affect the revenue and profit level of the company more obviously.

In 2019, influenced by African Swine Fever, the live pig price continued to rise again after bottoming out, and soared sharply and hit a new high in the latter half of the year. In November, due to the factors of released national reserved meat and phased pig sale strategy adjustment of large-scale enterprise, the pig price was high and turbulent after peaking and dropping slightly. The pig price skyrocketed by almost 200% within the year. The inflation arising out of rise in pork price due to short supply of live pigs also became a focus of attention of the market. In the poultry industry, due to shortage of introduction quantity previously, and sharp increase in substitution consumption demand of pork, the price of breeding poultry, non-slaughtering chicken and duck, and poultry meat was high throughout 2019. At the end of 2020, the poultry meat supply is predicted to gradually recover, but the pork supply of 2020 would be scarcer. It is expected that the live pig price of 2020 continues to be high and consolidated and even is possible to rise continuously and break through the previous high, and the price of poultry meat may gain the definite support. However, due to increase in supply, the market supply and demand game will be fiercer. These will influence the profit fluctuations of the company at stages.

Risk response measures: Excluding the influence of sporadic epidemics, the fluctuations in price of livestock and poultry mainly depend on the periodic increase and decrease of breeding supply quantity. Thus, the process of price falling of livestock and poultry itself is the process of survival of the fittest in the industry and exit of some participants. In this context, the company only needs accomplishing the self breeding efficiency improvement to make its breeding cost lower than the competitors, so that it can gain more revenues or suffer less loss compared with the competitor during the process of price falling. In the case of exit of some participants, reduction in total supply, and price rise again, the company may gain larger market shares and higher returns than before. In recent years, the company has always been committed to the continuous improvement of breeding efficiency, and has taken the lead in the industry in the aspects of production of healthy young breeding poultry and PSY and full cost of pig breeding, which ensures that the company still preserves stronger competitiveness during the price falling of livestock and poultry. On the other hand, different from most of agricultural and animal husbandry enterprises, the company also possesses the slaughter processing business in the downstream link of breeding, to form the hedge with breeding link. In the case of price falling of livestock and poultry, it means that the cost of raw meat of slaughter processing business is reduced, and its profit space will be increased, which can ease the influence of price falling of livestock and poultry on the entire company properly.

IV. Influence of environmental protection policy.

Since 2014, China has implemented *Pollution Prevention Regulation on Large-scale Breeding of Livestock and Poultry*. The government has made great efforts and great determinations to renovate the livestock farm, and various regions have drawn up new regulations on demolition, prohibition and restriction of livestock farm. At the central level, new *Law on Environmental Protection* came into effect on January 1, 2015. The State Council issued *Action Plan of Water Pollution Prevention* on April 16, 2015. The Ministry of Agriculture also released *National Production and Development Planning of Live Pigs (2016-2020)* in April 2016, classifying eight provinces with intensive water networks in the south as the constraint development area explicitly. The State Council issued *Ecological Environmental Protection Planning in the 13th Five-year Plan* at the end of November 2016, and explicitly proposed that all regions close or remove the livestock and poultry farms (communities) and households specialized in breeding in the prohibition zone pursuant to the law by the end of 2017. Six supervision groups in the first batch of central environmental protection supervision “follow-up reexamination” in 2018 organized the action-based and point-based special supervision in view of the key tasks and prominent problems in the environmental governance. During the process of “follow-up reexamination”, various regions intensified the pollution troubleshooting of livestock farms. Some farmers were ordered to suspend production to restore the environment or close and ban for the reasons that the shed equipment fails to meet the environmental protection standard or the waste water exceeds

the standard for drainage. These pressures from the environmental protection policy will compel some livestock and poultry farms with substandard environmental protection to exit the market, and reduce the breeding quantity, so as to bring definite effects on the feed business growth and live pig and poultry acquisition of slaughter business of the company. Some branches and subsidiaries of the company fail to meet the environmental protection requirements with economically hardware transformation, or no longer have the market basis due to being in the prohibition zone, which will lead to shutdown of some branches and subsidiaries. In the long run, due to exit of backward production capacity with substandard environmental protection, the excellent producers remaining in the industry will gain better profitability and still have the positive significance to the entire industry.

Risk response measures: In view of changes in the breeding market, the company masters the inventory fully, sets up the poultry and pig breeding service company by converting the feed marketing mode, gives full play to industrial support and integrated service, and strengthens the cooperation with large and medium-sized farms and farmers in conformity with the environmental protection standard. During the explorative process of new breeding mode, the ecology, environmental protection, efficiency, and safety is deemed as the primary consideration of project design, to help the farmers transform and build the sheds meeting higher environmental protection standard requirements, promote the breeding benefits, and drive the sound development of domestic livestock breeding industry actively. On the other hand, it develops the increment actively, cultivate new livestock breeding base in various forms of new construction, acquisition, joint venture and cooperation in the environmental suitability area by virtue of existing business layout of the company nationwide, to ensure the stable breeding resources of the company.

V. Risk of food safety accidents.

The food safety concerns the physical health and life safety of the public, and is the important factor of influencing the enterprise reputation and operation. As for the food enterprise, the product quality and food safety are even a matter of life and death. If the food enterprise is negligent in any link during the operation process and the food safety problem or accident occurs, the enterprise is possible to be claimed, litigated or punished, and even the enterprise brand and reputation are influenced, so as to have the significant adverse effect on the business, financial conditions, stock price or operating performance of the enterprise. The revised *Food Safety Law* has been formally implemented since October 1, 2015. The new law involved 154 articles from the original 104 articles, known as “the strictest one in history”, and represented that the national attention to food safety was elevated to an unprecedented level. The outbreak of African Swine Fever in 2018 placed higher demands on the food safety control. The African Swine Fever itself is not a zoonotic disease and the pork with African Swine Fever virus is not harmful to humans after conventional heating and cooking. However, there is not yet completely effective prevention and control measure for African Swine Fever at present, and the pork and its products are one of the main carriers of virus, so more costs should be input to prevent and control the African Swine Fever during the process of live pig recovery and slaughter, pork transportation and sales.

Risk response measures: The company pays high attention to the food safety management work all the time, and strictly requires to put the food safety first in all work with great importance and take seriously. The company implements the food safety into each link of actual production and operation feasibly. In February 2015, the company established Safety and Environmental Protection Department, to guarantee the safety, health and environmental protection of products, and promote the long-term and sustainable development of the company. The company also upgrades the equipment of “three-level” detection system, adds 5 regional testing centers, expands new staff and things in the laboratory in all branches and subsidiaries, guarantees the scientificity and reasonableness of food industry chain fund, resource, and talent allocation and input, preliminarily builds more advanced scientific, efficient, safe and sound environmental management system, and enables the food safety organization management, high-end facilities, process management, and key link control to realize upgrading. At present the company has created a food safety control link from feed, livestock breeding to dining table. In 2014, “Beiyouzi” brand duck of the company took the lead in achieving the traceability in the whole process in China. In 2015, Chengdu Xiwang Food under the company became the second batch of national standard pilot enterprise with “food cold

chain logistics trace management requirements”. In addition, the safety and environmental protection system of the company was actively geared to international standard. In 2016, it passed the food technical standard certification of British Retail Consortium (BRC). In the first plenary meeting of the Global Food Safety Initiative (GFSI) in China in 2016, the company was elected as the vice chairman unit of Council in China and became the domestic first private enterprise of China chosen to be the member of GFSI Global Board of Directors. In October 2019, the Eighth GFSI Focus Day China undertaken by the company was held in Chengdu. It is the first time that the private enterprise undertook this activity since GFSI began to hold the activity of Focus Day China in 2012, and the first time that GFSI Focus Day China was held in the province other than Beijing and Shanghai. The company had been continuously selected as Top 100 Integrity Model Units of China Food Safety Annual Conference and Top 20 Cases of Management Innovation between 2016 and 2017. These represented that the food safety work of the company was recognized at home and abroad.

At present, all food enterprises under the company had passed China-HACCP standard certification, and more than 60 food companies are finishing the BRC and Global-GAP standard certification in succession. In addition, the company cooperates with multiple parties by GFSI platform resources, carries out the antimicrobial-reduced and antimicrobial-free practical exploration work, and actively drives the popularization of antimicrobial-reduced and antimicrobial-free successful cases.

VI. Risk of exchange rate fluctuation.

Currently, the global purchasing degree of raw materials for feed production is deeper and deeper, and the feed enterprises in the feedstuff purchasing aspects focusing on foreign supply such as corn, soybean, whey powder, fish meal, and DDGS are influenced by the exchange rate increasingly. At the same time, our company has a larger scale of foreign operation than that of peers in China. In the foreign investment and overseas production and operation, the cross-border capital transaction and settlement limit involved are larger and larger, and accordingly it is affected by the exchange rate fluctuation. In 2019, Sino-US trade friction became the primary influencing factor of pulling the exchange rate volatility, with the ups and downs of RMB exchange rate and significant rise of volatility. At the beginning of August, RMB exchange rate breaking “7” for the first time over the past 10 years was regarded as the key point position and important psychological barrier of RMB exchange rate. From September to December, the situation of Sino-US trade friction was somewhat eased. The US postponed imposing tariffs. The RMB exchange rate regained the rising tendency, and the exchange rate returned to be less than 7 again. Such ups and downs influenced the foreign exchange management of the company greatly. Besides, due to the turbulent political scene of host country and the foreign exchange policy adjustment, the exchange rate of the domestic currency of several countries of the Middle East with existing business of the company against USD had the larger depreciation, and made the adverse impact on the company.

Risk response measures: In response to the growing needs for overseas raw material purchasing and investment and operation, the company has built the foreign commercial and trade center and investment and financing center with Singapore company as the basis since 2016, actively developed the international centralized purchasing of raw materials, foreign direct financing, supply chain finance, foreign exchange risk management, and raw material purchasing risk management on Singapore platform, and reduced the influence of exchange rate fluctuation on the foreign business capital transaction. Meanwhile, in the foreign production and operation, the company further strengthened the close connection and communication with overseas financial institutions, institutions functioning abroad of the Chinese government, and host government, identified the trend of domestic currency exchange rate of host country in time, and ease the adverse impact of exchange rate fluctuation by means of domestic currency direct investment abroad.

VII. Risk of human resources.

The risk of human resources of the company mainly involves the following four aspects. First, the pig breeding scale of the company will realize the leapfrog development, and have the challenge and pressure in rapidly hiring and cultivating a large number of qualified pig farmers. Second, as the company transforms from the traditional agricultural and animal husbandry enterprise to agricultural and animal husbandry food integrated enterprise, the company will be faced with the

risk of insufficient reserve of high-quality operation and management talents in new business domains and talents in food retail terminal, Internet platform and other emerging fields. With continuous improvement of human costs, the salary of employees also becomes the important factor of increase in costs of the company. Third, the company, as the benchmarking enterprise in agricultural and animal husbandry industry of China, has cultivated many excellent talents in the development history for more than 30 years. With constant reinforcement of competition in the agricultural and animal husbandry industry and various cross-border capitals flowing into the agricultural and animal husbandry industry in recent years, all kinds of enterprises competed for human resources more fiercely. Especially, the key talents involving high-level and middle-level managers and professional technicians who mastered the market and technological resources were backbone forces of the enterprise, and the brain drain of such kind would cause serious losses to the original enterprise and finally may influence the competitiveness of sustainable development of the enterprise.

Risk response measures: In view of above risks, the company has attached importance to talent cultivation and organization activation as long-term strategic task of the company. The company reinforces the talent recruitment in the pig breeding business and strategic new business domain, expands the cross-industry training and learning actively, and enriches the knowledge structure and ability structure of existing talents in the company. During the strategy transformation period of the company, it sets up the manager development platform, activates the internal venturing passion, and creates the growth platform of employee diversity by incentive organization. Moreover, the company realizes the continuous promotion of per capita efficiency by improvement of efficiency, lean orientation, optimization of industry chain design, and organization flattening, forms the professional manager development access with survival of the fittest by building the competition, selection and elimination mechanism, and creates the growth community of employee and company by building the reasonable evaluation and incentive mechanism and value sharing mechanism. In July 2019, the company firstly implemented the restricted stock and stock option incentive plan, improved the incentives for core technicians and core backbones in pig breeding business team, ensured the rapid landing of scientific and technological strategy and pig breeding strategy of the company, further established and perfected the long-term incentive mechanism of the company, gave full play to the initiatives of senior managers and some core persons of the company, and integrated the shareholder benefits, company benefits, and personal benefits of core team effectively, to promote the long-term development of the company.

The profit distribution plan approved by the board of directors of the company as follows: with the base of 4,143,756,219, the company shall pay a cash dividend of 1.5 Yuan (including tax) for every 10 shares to all shareholders, and send 0 shares of bonus (including tax), instead of transferring the accumulation fund to increase the share capital.

IV. Change of Registration

Organization code	91510000709151981F
Change in main business since the company listing (if any)	The company completed the overall listing of major assets restructuring of agriculture and animal husbandry industry in the system in 2011. The company replaced and sold all equities of Chengdu New Hope Industry, Sichuan New Hope Industry, and New Hope Dairy held by the company, and replaced and issued the shares to purchase the agriculture and animal husbandry assets. Upon completion of such major assets restructuring, the production scale, profitability, industrial competitiveness and anti-risk capability were improved significantly, and became the agriculture and animal husbandry listed company with the most complete industry chain and the most extensive product coverage in China at present. Its industrial competitiveness and anti-risk capability were promoted greatly. The company strove to build the industrial cooperation and integrated operation pattern of feed production – livestock breeding – slaughter – meat product processing, so as to effectively stabilize the volatility of livestock breeding operation, form more complete, controllable, and traceable intra-industry circulation system, and guarantee the feed and food safety.
Change of all previous controlling shareholders (if any)	No change

V. Other Relevant Data

Accounting firm employed by the company

Name of accounting firm	Sichuan Huaxin (Group) CPA Firm (Special general partnership)
Office address of accounting firm	28F, South Building, Jinmaolidu, No. 18, Ximianqiao Street, Chengdu City
Name of signing accountant	Wulin Li, Dan Wu

Sponsor institution performing the duty of continuous supervision during the report period employed by the company

Applicable Not Applicable

Financial consultant performing the duty of continuous supervision during the report period employed by the company

Applicable Not Applicable

VI. Main Accounting Data and Financial Indicators

Does the company need retroactive adjustment or restatement of accounting data in previous years?

Yes No

	2019	2018	Increase or decrease of this year than last year	2017
Operation revenue (Yuan)	82,050,539,486.67	69,063,225,293.92	18.80%	62,566,848,592.71
Net profit attributable to shareholders of listed company (Yuan)	5,041,999,768.06	1,704,646,781.14	195.78%	2,280,000,493.58

Net profit attributable to shareholders of listed company deducting non-recurring profit and loss (Yuan)	5,272,134,091.20	2,031,060,685.46	159.58%	2,275,780,457.37
Net cash flow from operating activities (Yuan)	4,436,893,031.04	3,336,986,800.09	32.96%	2,712,191,729.32
Basic earnings per share (Yuan / share)	1.22	0.40	205.00%	0.54
Diluted earnings per share (Yuan / share)	1.22	0.40	205.00%	0.54
Weighted average return on equity	20.63%	7.87%	Increase of 12.76%	10.81%
	End of 2019	End of 2018	Increase or decrease of end of this year than end of last year	End of 2017
Total assets (Yuan)	64,217,666,883.55	47,943,788,133.54	33.94%	42,451,633,023.98
Net asset attributable to shareholders of listed company (Yuan)	26,061,689,948.56	21,575,123,234.66	20.80%	20,832,404,176.34

VII. Accounting Data Difference under Domestic and Overseas Accounting Standards

1. Difference between net profit and net asset in financial report disclosed pursuant to International Accounting Standards and Chinese Accounting Standards simultaneously

Applicable Not Applicable

The difference between net profit and net asset in financial report disclosed pursuant to International Accounting Standards and Chinese Accounting Standards does not exist during the report period of the company.

2. Difference between net profit and net asset in financial report disclosed pursuant to Overseas Accounting Standards and Chinese Accounting Standards simultaneously

Applicable Not Applicable

The difference between net profit and net asset in financial report disclosed pursuant to Overseas Accounting Standards and Chinese Accounting Standards does not exist during the report period of the company.

VIII. Main Financial Indicators on a Quarterly Basis

Unit: Yuan

	The first quarter	The second quarter	The third quarter	The fourth quarter
Operation revenue	16,211,692,429.69	19,082,606,521.57	21,623,016,474.26	25,133,224,061.15
Net profit attributable to shareholders of listed company	666,394,021.12	895,461,251.65	1,509,737,335.36	1,970,407,159.93

Net profit attributable to shareholders of listed company deducting non-recurring profit and loss	723,549,454.53	938,425,454.11	1,580,285,557.27	2,029,700,670.53
Net cash flow from operating activities	20,415,409.81	523,268,764.13	1,620,649,297.56	2,272,559,559.54

Are there major differences between the above financial indicators or aggregation and relevant financial indicators in the disclosed quarterly report and semi-annual report of the company?

Yes No

IX. Items and Amount of Non-recurring Profit and Loss

Applicable Not Applicable

Unit: Yuan

Items	Amount of 2019	Amount of 2018	Amount of 2017	Description
Profit and loss on disposal of non-current assets (including the write-off of provision for impairment of accrued assets)	-131,475,162.20	-199,112,859.91	10,944,686.09	The company's profits and losses on disposal of fixed assets, intangible assets, productive biological assets, long-term equity investment
Government subsidy included in current profit and loss (except for the government subsidy closely related to enterprise business and enjoyed by quota or ration pursuant to national uniform standards)	113,155,014.75	95,039,970.81	69,877,876.44	The company's profits from government subsidy
Earnings from the investment costs of subsidiary, joint venture and cooperative enterprise gained by the enterprise less than the fair value of net identifiable assets of invested unit to be enjoyed in investment	2,974,450.36		471,392.95	
Except for effective hedging business relevant to normal business of the company, profit and loss arising from fair value changes by holding the trading financial assets, derivative financial assets, trading financial liabilities, and derivative financial liabilities, and return on investment from disposing the trading financial assets, derivative financial assets, trading financial liabilities, derivative financial liabilities, and other debt investment	-17,670,301.34	-6,857,566.64	10,730,782.86	Profits from the company's purchase of transactional financial assets

Accounts receivables of independent impairment test, and return of provision for impairment of contract assets	9,764,097.98	2,868,506.28		
Profit and loss arising from external entrusted loan			824,342.14	
Other non-operating revenues and expenditures except for above items	-211,725,664.34	-191,688,125.85	-92,706,270.00	Mainly due to the expenditure on normal death or elimination of livestock and poultry breeding
Other profit and loss items in conformity with definition of non-recurring profit and loss	10,217,271.00	38,494,221.19	37,671,072.48	Profits from financial products
Minus: Amount of income tax effect	-1,579,982.80	22,444,882.63	18,372,520.64	
Amount of minority equity effect (after tax)	6,954,012.15	42,713,167.57	15,221,326.11	
Total	-230,134,323.14	-326,413,904.32	4,220,036.21	--

For non-recurring profit and loss items defined by the company according to *Explanatory Notice about Company Information Disclosure with Public Issue of Securities No. 1 – Non-recurring Profit and Loss*, and for defining non-recurring profit and loss items listed in *Explanatory Notice about Company Information Disclosure with Public Issue of Securities No. 1 – Non-recurring Profit and Loss* as recurrent profit and loss items, the reasons should be explained.

Applicable Not Applicable

The situation of defining non-recurring profit and loss items defined and listed in *Explanatory Notice about Company Information Disclosure with Public Issue of Securities No. 1 – Non-recurring Profit and Loss* as recurrent profit and loss items does not exist during the report period of the company.

Section 3 Company Business Summary

I. Main Business of the Company during Report Period

The main business of the company operation includes feed, white-feathered poultry, pig breeding, and food.

(I) Feed business

The feed can be divided into premix, concentrate, and batch (or complete feed) according to the scope of nutritional components included. The premix is the mixture of various nutritional additives such as vitamin, mineral substance and amino acid. The concentrate is formed after adding various animal and vegetable proteins into the premix. The batch is formed after further adding various energy raw materials into the concentrate. In terms of the final nutritional needs, the amount of nutritional additives is small with high unit value, and the energy raw materials have low unit value with large amount. The protein raw materials are between both. Among 230,000,000 tons of feeds nationwide in 2019, the premix only accounted for about 2%, and the concentrate accounted for about 5%, while the batch accounted for more than 92%. Most feed enterprises produced the batch. Due to large yield of batch, the large-scale enterprises also have greater demand for premix and concentrate, and in general, produce the premix and concentrate autonomously. The small and medium-sized enterprises only produce the batch usually for their small scale, and the premix or concentrate as needed is purchased from the premix unit of large enterprises or other independent premix enterprises. Some farmers on a scale also purchase the premix or concentrate directly, and use after blending the protein and energy raw materials voluntarily. In the feed business of the company, the premix and concentrate are available, and the batch is also available. The premix and concentrate are sold to external market directly, and sold to internal batch factory.

The feed can be divided into poultry feed, pig feed, aquatic product feed, and ruminating feed according to the feeding animals. Among the feed yield nationwide in 2019, the poultry feed, pig feed, aquatic product feed, and ruminating feed respectively accounted for 51%, 33%, 10% and 5%. The feed products of the company contain all above categories. The downstream of the company has the white-feathered poultry and pig breeding business, so the poultry feed and pig feed produced by the company are sold to external market and used by the downstream contract farmers and internal farms. Moreover, the aquatic product feed and ruminating feed produced by the company are sold to the external market.

The main operation links of feed business include technology research and development, raw material procurement, production and processing, and sales service, usually referred to as “technology, procurement, production and sales”. The interaction between technology and procurement is the closest. Because the material cost of feed products account for 80-90% of selling price, and purchasing the cheap raw materials is one of key factors to success. However, the raw material procurement should take the nutritional needs into account, rather than only considering the cost. There are hundreds of raw material types, and accordingly hundreds of formula combinations are formed. The enterprise should design the formula at the lowest cost of meeting the specific nutritional needs according to the nutrient contents and costs of different raw materials at given time, and then make the proper procurement decision. After defining the formula and preparing the raw materials, the production and processing link mainly focuses on production efficiency and product quality. Moreover, the sales service link mainly focuses on customer development and care, sells the products of meeting different needs to different customer groups, helps the peasant households enhance the breeding level by additional service, optimizes the cost and efficiency of distribution link, feeds back the customer demands and product problems to the technology research and development department, and forms good interaction.

In recent years, the domestic feed industry has entered the mature stage, and the growth of national feed yield from 2014 to 2019 had been respectively 3.8%, 1.4%, 4.5%, 5.9%, 2.8% and -3.7% on year-on-year basis. Under the total quantity with stable growth, the feeds of different animal species would show different growth trends due to different influences of long, middle and short periods. The long period refers to the period of industrial upgrading and technical progress. For example, the poultry feed with higher degree

of downstream scale breeding, higher penetration rate of batch, and relatively mature technology has slower overall growth than the pig feed and aquatic product feed in recent years. The middle period refers to the period of supply-demand relationship and price changes of livestock and poultry products. The periodic increase and decrease in breeding quantity of some type of animal downstream will influence the increase and decrease of feed sales volume in the corresponding type upstream. The short period refers to the natural disaster and animal epidemics of influencing the specific animals, such as H7N9 flu of influencing the poultry feed in the first half year of 2017, torrential rain and flood in the south of influencing the aquatic product feed in 2017, and African Swine Fever of greatly influencing the pig feed from the middle of 2018 up to now. According to the statistics of China Feed Industry Association, the pig feed yield of 2019 nationwide fell by 26.6% on year-on-year basis, with dual influence of trough period of regular pig cycle and African Swine Fever. The shortage of pork caused by African Swine Fever drove the alternative supply of poultry meat and poultry eggs, and then drove the poultry feed to grow by 17.1%, but the increment of poultry feed is insufficient to make up the influence of pig feed reduction, so the annual production firstly fell on year-on-year basis in recent six years.

The overall maturity of the industry or the influence of long, middle and short periods makes the increasingly fierce competition. On the one hand, each enterprise is established in each link of existing business and strives to promote the innovation. On the other hand, the enterprise extends to the upstream and downstream of industry chain, and optimizes its strategic positioning. In the link of technology research and development, the microbial fermentation technology expedites the development of biological environmental protection feed. The aquatic product feed is upgraded from sinking pellet diet to floating expanded pellet diet, and more and more fine-sorted feed types are available in other categories according to the feeding phase. In the link of raw material procurement, the enterprise continuously expands the exploration of more diversified new raw materials. Moreover, for the conventional bulk raw materials, the upstream important raw material base is locked by means of strategic cooperation agreement, equity participation or self-run, and the accuracy of bulk purchasing is enhanced by big data, futures and other financial instruments. In the link of production and processing, more efficient and convenient logistics can support the transportation with longer radius, and create more and more feed factories with larger capacity. The enterprise improves the efficiency by more centralized scale production, and meanwhile enhances the quality by professional workshop or specialized production line. In the link of sales service, the enterprise provides multiple forms of value-added service for peasant households in addition to selling the feed products, such as technical guidance, animal healthcare protection veterinarian, financing support, information service, and livestock and poultry sales on a commission basis, strengthens the customer stickiness, shortens the distribution link, enhances the ratio of direct supply, helps the peasant household improve the breeding efficiency, and increases the revenues.

In the upstream and downstream extension of industry chain, it extends to the upstream raw material planting and trade link, and extends to the downstream breeding link and slaughter and deep processing link. By contrast, due to difference between pig and poultry (see the introduction in the white-feathered poultry business for details), the poultry feed enterprise extends to the downstream poultry breeding and slaughter link earlier and more. Moreover, the pig feed enterprise extends to the pig breeding and slaughter link later, and it is very rare at early phase. However, in recent two rounds of pig cycles, vertical intergration of pig feed enterprises is growing especially after African Swine Fever. Such extension to the downstream link reflects the appeal of feed enterprise controlling the downstream breeding and consumption need, to enable the upstream feed capacity to be fully used and gain the profit of downstream link. Moreover, the reason behind lies in transformation of supply-demand relationship across the industry and gradual scale downstream breeding link, and the industry value gradually focuses on the downstream breeding link and food link from the feed link in the past.

The promotion and innovation of existing business or the upstream and downstream extension of industry chain need the support of comprehensive strength of the enterprise in all aspects. Due to greater comprehensive strength, the large enterprise possesses more and more obvious advantages in the competition, and the market share is gradually improved, to lead to gradual promotion of the industry concentration degree. From 2013 to 2019, the number of feed enterprises nationwide had dropped to more than 7,800 from more than 10,000, while the number of enterprises with annual output of more than 100,000 tons per factory had risen to 621 from 460. The African Swine Fever in 2019 even accelerated the shuffle and integration of industry. Compared with the large enterprises, the small and medium-sized feed enterprises had the weakness in technology, biological safety and other aspects,

and deemed the family farms and small-scale scattering raising households as main customers in sales. The small-scale scattering raising households were more affected by African Swine Fever, so that the small and medium-sized feed enterprises were more affected than the large enterprises. The large enterprises will be faced with more market space after getting through the influence of African Swine Fever successfully.

After long-term development, the feed business of the company has maintained the position of the largest scale in the domestic feed industry for many years, with the poultry feed ranking first nationwide, and pig feed, aquatic product feed, and ruminating feed ranking Top Three nationwide. As the industry leading enterprise, the company leads the industry and embraces the changes relying on its leading position with the situation changes of the industry, strengthens the product power, purchasing power, productive power and service power constantly, launches the biological environmental protection feed and antimicrobial-free feed, eliminates the backward production capacity, and builds the large output benchmarking factory. On this basis, it actively propels the extension of industry chain, and explores the transformation and upgrading of business model. On the one hand, our company makes full use of downstream industry chain foundation arranged in the past, actively develop the integration project of feed – breeding – slaughter by new investment or internal business structural adjustment, actively invest in and acquire the project related to food and sales, and steadily promote the transformation from feed enterprise to breeding and food enterprise. On the other hand, our company takes the lead in launching the project of “everything flourishing” (poultry flourishing, pig flourishing, fish flourishing, cattle flourishing, sheep flourishing) to provide the technical service and financial service for peasant households in the entire industry, and the hosting service oriented towards large-scale pig farms, and set up the breeding training management company or breeding service company in the poultry breeding and pig breeding fields, to facilitate the direct connection with large-scale farms or farmers, meanwhile develop the guarantee business with a steady pace, and jointly promote the development of feed business.

(II) White-feathered poultry business

The white-feathered poultry refers to large white-feathered broiler and white-feathered meat duck, characterized by short growth cycle and high feed conversion ratio. More than 4 billion white-feathered broilers and about 3 billion white-feathered meat ducks are slaughtered in China every year, and together with more than 3 billion yellow-feathered meat broilers make up the main source of poultry meat consumption of the Chinese. The white-feathered poultry business includes breeding poultry propagation, commercial generation poultry breeding, poultry slaughter, and deep processing of poultry meat. The large-scale and industrial development of white-feathered poultry industry starts earlier with higher maturity in China, and the number of single batch slaughter by white-feathered poultry breeding is larger, which generally needs matching with the industrial slaughter on a large scale. Therefore, regardless of whether the commercial generation breeding link is supported by the company integration or adopts the “company + peasant household” cooperation, many enterprises will adopt the industry chain of “poultry feed – commercial poultry breeding – poultry slaughter” or vertical integration model. A small number of large-scale enterprises will further extend respectively in the upstream breeding poultry link and downstream prepared poultry meat link, to form more complete industry chain.

The breeding poultry propagation link can be subdivided into breeding and breeding poultry cultivation. Breeding refers to selection of high intergenerational good stock. Breeding poultry cultivation refers to expanding propagation of good breed selected, and output of commercial generation baby chicks and baby ducks. The breeding link has very high technology complexity, and needs long-term research and development accumulation. At present, it is mostly controlled by foreign professional breeding poultry enterprises. The individual domestic leading enterprise has made a breakthrough in recent years, and selected the breeding chickens and ducks with proprietary intellectual property rights. Even the low intergenerational breeding poultry cultivation link has far higher technology complexity than the commercial generation breeding link, and has larger amount of investment in breeding poultry farm and breeding egg hatchery, so it is generally finished by the enterprise, other than peasant household. For the domestic white-feathered poultry industry, the breeding poultry link mostly introduces the great grandparents from foreign professional breeding poultry enterprises, carries out the expanding propagation of grandparents and parents in China, and then outputs the commercial generation baby chicks and baby ducks. However, as for specific enterprises, it mainly includes two categories. Most enterprises still lay particular emphasis on downstream link, focus on the commercial generation breeding and slaughter, extend the upstream breeding poultry cultivation to the parent generation, and output the commercial generation baby chicks and baby ducks for

self use. Some will further extend to the grandparent generations for breeding. Also a small number of professional breeding poultry enterprises lay particular emphasis on upstream link, focus on introducing from abroad, and sell the bay chicks and baby ducks after expanding propagation in China, without setting foot in the commercial generation breeding.

There are two main models involving company integration self-support or “company + peasant household” cooperation breeding in the commercial generation breeding link. The integration self-support refers to the model that the commercial generation chicken and duck breeding is run by the enterprise itself, and ultimately the company slaughters and sells the chicken and duck. The “company + peasant household” cooperation breeding is that the enterprise provides the commercial generation baby chicks and baby ducks for peasant households or sell them to peasant households, with breeding by peasant households, and finally the enterprise organizes and recovers the cultivated non-slaughtering chickens and ducks for delivery and slaughtering. According to the settlement mode and the ownership of chickens and ducks as agreed in the contract, i.e. the different of situations that the ownership of chickens and ducks belongs to the enterprise or peasant household, or the baby chicks and baby ducks are provided by the enterprise or sold to the peasant household, the “company + peasant household” cooperation breeding can be further divided into traditional contract breeding model and entrusted breeding model.

Whether the enterprise operates the commercial generation breeding on its own is related to the technical attribute of this link. Due to shorter growth cycle and faster turnover speed of the poultry than those of the pig, the breeding technology of the poultry is lower than the technical difficulty of pig breeding, and the single investment threshold is relatively low. Thus, the domestic poultry breeding development starts earlier and is more mature with higher scale degree than the pig breeding. During the process of commercial generation breeding, the enterprise does not have obvious difference in technology and efficiency merely in general compared with the farmers. Usually, the significance of the enterprise operating the commercial generation breeding personally lies more in expressing higher requirements for the downstream food industry, i.e. the upstream breeding link is controllable all the way to ensure the food safety. However, in recent years, stricter and stricter environmental protection supervision has brought new variables. Some commercial generation breeding enterprises or peasant households restrict or suspend production and even exit the industry due to being in prohibition area or being in the restriction and suitable area with substandard environmental protection. Therefore, the existing participants or new entrants in the industry must firstly ensure developing in the restriction and suitable area, and then should input more resources in the sheds, environmental protection and other aspects. To popularize new environmental protection technology and shed, even the enterprise persisting in “company + peasant household” cooperation breeding model also needs building some sheds, adopting new technology, then playing a demonstration role, and then popularizing to farmers.

The investment input in the poultry slaughter link is larger and is generally completed by the enterprise. As previously mentioned, most poultry slaughtering plants will form the supporting industry chain together with the upstream poultry breeding and even poultry feed links, focus on or preferentially recover the commercial generation chickens or ducks with upstream integration self-support or “company + peasant household” cooperation breeding. However, in some areas, the commercial generation chickens or ducks cultivated and sold by the independent farmers in the market are flexibly recovered in consideration of reducing the raw material costs and operation expenses based on the market conditions. At the same time, some poultry slaughter enterprises in the industry fail to possess any support of breeding and feed upstream, purely rely on recovering the commercial generation chickens or ducks in the market for slaughtering, utilize the characteristics of the market of commercial generation chickens or ducks incompletely synchronized with the market of chicken and duck, and make a profit by acquiring at a low price and selling at a high price. But such operation model is unstable, and many enterprises suffer great losses due to misjudgment of market information.

In recent years, the domestic white-feathered poultry industry has entered a stage of breeding – slaughter structure rebalances after experiencing multiple rounds of cycle growth. The previous round of cycle peak started in 2016. The white-feathered poultry business entered the stage of a round of booming market, to stimulate the increase in the capacity of the entire industry. From the beginning of 2017, such relatively surplus capacity together with the influence of H7N9 flu epidemics rapidly made the market at low ebb which had been the worst in years. The strict supervision of environmental protection in summer of 2017 removed a large number of breeding sheds with substandard environmental protection by delineation of prohibition area and restriction area, and further cut down the capacity of poultry breeding, so as to result in the capacity shortage of poultry breeding relative to poultry

slaughter, and rise in price and profit recovery in the poultry breeding link since 2018. The shortage of pork caused by African Swine Fever has driven the alternative supply of poultry meat since 2019. Although the poultry breeding quantity has been at a higher level than that in the past years, the livestock on hand of white-feathered broiler and breeding chicken nationwide in 2019 increased by 11.8% on year-on-year basis, and the poultry meat yield increased by 12.3% on year-on-year basis, but the poultry industry was in the booming state at a high price annually. The alternative demand arising from African Swine Fever will always be weakened with mitigation of epidemics, and the white-feathered poultry industry should be promoted itself. In the short run, the important opportunity of the industry is to seize the requirements of environmental protection upgrade, deem the environmental protection transformation and shed upgrade as an effective measure, and actively control the commercial generation breeding base in conformity with environmental protection requirements. In the long run, it needs the cooperation between breeding and slaughter links, realizes the channel upgrade on the sales end, and enables high standard input in the breeding link to get a return with higher premium in the poultry meat sales.

In the breeding poultry propagation link, the company is the largest supplier of parental baby ducks and the second largest supplier of commercial generation baby chicks and baby ducks in China, and especially has the industry leading technology in the breeding duck propagation field. The company cooperates with Chinese Academy of Agricultural Sciences, and elaborately selects “Zhongxin” Beijing Duck in view of the domestic consumption characteristics of duck. In 2018, it successively passed the test of grandparents, parents and commercial generation of “Supervision and Testing Center for Poultry Quality of Ministry of Agriculture”, variety certification of Animal Husbandry Bureau of Shandong Province, and site assessment organized by China National Commission of Animal Genetic Resources. It gained the certificate of new animal species (synthetic line) issued by China National Commission of Animal Genetic Resources in April 2019, with official listing. In 2019, the alternative demand for poultry meat arising from African Swine Fever also pulled the demand growth for upstream breeding poultry. The company grasped this market opportunity, utilized the relatively abundant breeding egg incubation capacity, purchased the breeding eggs from other professional breeding poultry enterprises, and incubated the commercial generation baby chicks and baby ducks. At present, the baby chicks of the company are sold to other manufacturers, and the other part is used for the downstream commercial generation breeding of the company. The baby ducks are mainly used for the downstream commercial generation breeding of the company.

In the commercial generation breeding link, the company currently focuses on the “company + peasant household” cooperation breeding method, upgrades from the traditional contract breeding model to the entrusted breeding model, and meanwhile expands the commercial generation integration self-support gradually in some areas with proper conditions. The ownership of commercial generation chickens and ducks in entrusted breeding model and integration self-support model belongs to the company, and is incorporated into the production and sales volume of poultry breeding of the company. The total quantity of commercial generation breeding in above two models has exceeded 300,000,000. Moreover, on the source of baby poultry, the entrusted breeding and integration self-support give priority to the baby poultry produced by the company, while the company also purchases the baby poultry from other manufacturers in the traditional contract breeding model.

In the poultry slaughter link, the company has ranked first in the industry for many years by virtue of the slaughtering quantity of about 700,000,000 poultries and the poultry meat production and sales volume of about 2,000,000 tons every year. “Liuhe” brand poultry meat under the company is the designated poultry meat supplier of Shanghai World Expo 2010 and Shanghai Cooperation Organization Qingdao Summit of 2018, and has stronger brand influence. Due to larger production and sales volume, the poultry meat slaughtered and produced had been sold mainly depending on the traditional trade mode of wholesale market for a long time. The wholesale market channel can help to digest the upstream enormous yields, but is detrimental to establishing the brand image and gaining larger value space of the poultry meat in the company in the long run. Therefore, the company had vigorously propelled the poultry slaughter to implement the strategy transformation of “frozen to fresh, raw to cooked, trade to terminal” since 2014, to intensify the fresh product sales at short range, also expand the connection of multiple emerging channels involving downstream food processing enterprises, chain supermarkets, and chain catering industry, reduce the dependence on wholesale market channel, and promote the channel upgrade.

(III) Pig breeding business

The pig breeding has much in common with the poultry breeding in various intergenerational production links, i.e. domestic and overseas enterprise labor division. The pig breeding business includes breeding pig propagation link and commercial pig fattening link. The breeding pig propagation link can be further subdivided into breeding and breeding pig cultivation. Breeding refers to selection of high intergenerational good stock. Breeding pig cultivation refers to further expanding propagation, and output of boar semen, sows, and commercial generation piglets. The breeding of pig also needs long-term research and development accumulation due to very high technology complexity. At present, it is mostly controlled by foreign professional breeding pig enterprises. The individual domestic leading enterprise has made a breakthrough in recent years. However, most domestic enterprises only introduce the great grandparental pigs from foreign suppliers and carry out the expanding propagation of grandparents and parents in China, other than setting foot in the upstream breeding link. A part of enterprises belongs to the professional breeding pig enterprises, and directly sell the breeding pigs and piglets to other enterprises after expanding propagation of great grandparental pigs introduced abroad, without setting foot in the commercial generation breeding. The other part of enterprises belongs to the large-scale enterprises with commercial generation pigs, extends to the upstream breeding pig cultivation link to ensure the supply of breeding pigs and piglets, and outputs the parental breeding pigs and commercial generation piglets for its own use.

To ensure the supply of piglets, some peasant households will participate in the parental breeding link, i.e. the peasant households purchase the parental sows and boar semen from the enterprise, and propagate the piglets. It is different from that the peasant households only breed the commercial generation other than breeding poultry in the poultry breeding. Even so, more and more peasant households exit from the parental breeding link gradually. This is mainly because the large enterprises perform the scale and intensive piglet production with development of the breeding technology, and have the obvious efficiency difference compared with the piglet breeding of peasant households. This is embodied in the most common indicator PSY in the industry. In recent two years, the average PSY of the entire industry has been about 17, and PSY of large-scale enterprises has generally been more than 20, and the average PSY of self-propagation and self-support of peasant households has been about 15. During the process of commercial pig fattening, the enterprises also have the definite differences in technology and efficiency compared with the farmers, but such difference in efficiency is not larger than the difference in efficiency in the piglet production link. Thus, the large enterprises are engaged in breeding and piglet production, and the peasant households focus on fattening link, as the allocation with the optimal efficiency formed in the industry development at the present stage.

There are two main models involving company integration self-support or “company + peasant household” cooperation breeding in the commercial pig fattening link. The integration self-support refers to the model that the commercial generation pig fattening is run by the company itself. The “company + peasant household” cooperation breeding is that the enterprise provides the commercial generation piglets for peasant households or sell them to peasant households, with fattening by peasant households. It has some differences with poultry breeding, i.e. it focuses on entrusted breeding model under “company + peasant household” cooperation model. The piglets are provided for peasant households by the enterprise, and the ownership of piglets and hogs belongs to the enterprise. The enterprise recovers the hogs upon completion of fattening. Or, the enterprise directly sells the commercial generation piglets to peasant households, but is not responsible for hog recovery, i.e. the traditional contract breeding model of selling the baby chicks and baby ducks and then recovering in the poultry breeding exists less. Similarly, the problem of whether the enterprise operates the commercial pig fattening personally is related to the technical attribute of this link. During the process of commercial pig fattening, the difference in efficiency of the enterprises is not larger than the difference in efficiency in the piglet production link compared with the farmers at the present stage. At the same time, the amount of investment in self-fattening is larger, influencing the return on investment. On the other hand, influenced by the African Swine Fever epidemic, many stocking households are relatively difficult to achieve better prevention and control effect due to restriction of equipment and facilities, with higher biological safety risk. To guarantee the safety of biological assets better, various enterprises divert some attention to equipment transformation and self-building fattening shed of stocking households. It also propels the overall facility and equipment upgrade of stocking households or retail investors in other aspect, and the fattening efficiency is somewhat improved. Therefore, the self-fattening model with full integration is still less in the domestic pig breeding business at present. When numerous enterprises invest a lot in pig breeding industry in recent years, and especially when various enterprises compete for market shares at early stage,

it is the construction of priority investment in breeding pig capacity, other than construction of fattening capacity.

The biggest difference between pig breeding and poultry breeding lies in the degree of vertical integration to downstream slaughter link. Due to the smaller number of single batch slaughter of pig breeding than that of poultry breeding, the small slaughtering workshop is enough to digest, without the stronger motivation of matching development between pig breeding and large-scale industrial pig slaughter in the early development. Regardless of purchasing the sows from pig breeding enterprises for self-propagation and self-support, or purchasing the piglets directly, the peasant households can independently contact the pig dealers for selling upon completion of fattening, and then the pig dealers sell to the slaughtering plant or small slaughtering workshop. Even though the scale breeding ratio is improved in recent years, the annual slaughter scale of breeding cluster of large enterprises is mostly 300,000 to 500,000 pigs, and has a gap with the annual capacity of at least 1,000,000 pigs in the common scale slaughtering plant. After the commercial pig fattening of the large enterprise at present, a substantial proportion of pigs should be sold to pig dealers, and the minority can be directly connected to the slaughtering plant. Thus, most of the domestic pig breeding and pig slaughter enterprises are developed independently nowadays.

Due to longer time of pig breeding, the pig breeding has more obvious and stable periodic features than the poultry breeding. A "pig period" is generally 3-5 years. Moreover, in recent years, due to gradually increasing scale of pig breeding enterprises and farmers, and enhancement of maintaining ability during downturn period of the market, the time span of "pig period" is gradually extended. The domestic pig breeding industry had entered the upward rebounding stage of the latest period since 2015, reached its peak in the middle of 2016, and then transferred to the downward adjustment stage. The high hog price from 2015 to 2016 triggered a new round of pig breeding investment and development. Compared with that in the past, the new investment of pig breeding in this round was mostly led by the large-scale enterprises, and a large number of feed enterprises entered the pig breeding field, with the main purpose of seizing the market shares during the industry transformation period in the efficient breeding method with higher scale degree and finer management. In the first half year of 2018, the entire industry encountered the lowest pig price since 2011. In the latter half of 2018, the serious African Swine Fever broke out in China, and the pig breeding enterprises and farmers suffered losses to varying degrees. Under pressure of market and epidemics, this round of expansion investment was slowed down, and some enterprises stopped expansion. In 2019, African Swine Fever was raging continuously. The relevant vaccine and effective therapeutic scheme are not available in the industry up to now. The enterprises and small and medium-sized retail investors continued to exit. Only the companies with better biosafety prevention and control in large enterprises can expand, which led a sharp reduction in the industry capacity. The swine livestock on hand at the end of 2019 fell by 27.5%, and the swine slaughter in 2019 fell by 21.6%.

The company started later in the pig breeding business, but has persisted in high standard development since entering the pig breeding business. The 1,000,000 swine production project invested and constructed by the company in Xiajin of Shandong adopted high automatic and intensive production mode, as the largest cluster swine propagation system nationwide at present, and was dedicated to establishing a benchmark in the domestic pig breeding industry. In February 2016, the board of directors of the company deliberated and passed *Pig Breeding Business Strategic Planning*, and strove to develop the pig breeding business in a wider range of domestic market with Xiajin project as the template. By the end of 2019, the company had realized and reserved the capacity layout of about 43,500,000 pigs nationwide, and live hog sell reached 3,550,000 pigs in 2019 had, to maintain Top 4 among the national listed company continuously.

1. The company's operation and breeding model

In the breeding link of breeding pig, the company has established the PIC and Hypor double-system breeding pig structure, according to the differences between the north and south markets in China, to select suitable breeding pig for the regional markets. In recent years, the company's average PSY has been kept above 24, which is in the industry-leading level. In the fattening process of commercial generation, the company conducts differentiated allocation strategy according to the market regions. In the regions with comprehensive advantages in consumption, land, environment, logistics, etc., the company actively arranges pig breeding business layout, gives priority to the construction of breeding pig farm to produce piglets by itself, and adopts the "company + peasant household" cooperative breeding as main event and the integrative self-feeding as supplementary one in the fattening process. In other regions, where the comprehensive advantages are not obvious but the company has the layout for pig feed business, the

company will purchase piglets from other large pig raising enterprises or professional breeding pig enterprises, and adopt cooperative fattening with peasant households to complete the fattening process, realizing the coordinated development of feed business and pig business. In 2019, among the fattening pigs, the ratio of self-produced piglet to purchased piglet is about 1:2 in terms of piglet source, and the ratio of integrative self-feeding to cooperative free-range farming is about 1:9 in terms of fattening model. However, in the medium and long periods, the company will gradually realize the complete independent supply of piglets, and also realize the balanced development of integrative self-feeding and cooperative farming.

2. Function division of cooperative fattening

In the cooperative fattening, the company and the farmers respectively invest different production factors, assume different functional assignments, and share different returns and risks. In terms of input of production factors, the company is responsible for the input of piglets, feed, veterinary drugs, vaccines, etc., and the farmers provide the input of fixed assets such as piggery. In addition, farmers need to pay a breeding deposit and bear the costs of employing labor, water, electricity and fuel in the fattening farm. In terms of functional assignments, the company is responsible for piglet supply, feed production, epidemic prevention and control, breeding technology guidance, collection and sales, while the farmers are only responsible for daily feeding and cleaning. In terms of returns and risks, the company bears the market price risk and enjoys the opportunity profit, while the farmers do neither bear the market risk nor enjoy the opportunity profit. The returns are relatively stable, not directly related to the market situation, but closely related to the fattening results. In addition, from the perspective of the company, it also will exist that farmers don't abide by the contract or the company's guidance, and sell the pig or use medication without authority. However, the scale of cooperative fattening is getting larger and larger and the cooperative period is becoming longer and longer in recent years, once the above issues appear, the farmers will bear huge risk of breaking of trust, and the company will charge the breeding deposit and sue for default behavior to the court, so it is becoming less and less that the aforesaid default behaviors happen in real life.

3. Pricing and settlement of the cooperative fattening.

When the company signs the contract of cooperative fattening with farmers, a basic unit price is firstly formed according to the market situation at that time, and the basic unit price floats appropriately according to the latest changes of the market during the collection and settlement. When fattened pigs achieve the weight for market, they are weighted, the basic price is formed by the base unit price multiplying the weight, then, according to the specific weight of each pig is beyond or does not reach ideal weight range, marketing rate (i.e., the survival rate), rate of certified products, feeding days, total gained weight, ratio of feed to pork in whole process, daily average gained weight, excessive consumption of feed and the other production indexes, the settlement price is adjusted, and the final entrusted feeding fee is decided.

4. Number, structure and their variation of the cooperative farmers

By the end of 2019, there are more than 1,900 farmers in cooperative fattening with pigs on hand in the company, with year-on-year growth of 54%.

From the perspective of scale of livestock on hand, the farmers with less than 500 pigs account for about 36%, with year-on-year increase of 4%; the farmers with 501-1000 pigs account for about 36%, with year-on-year decrease of 7 percentage; the farmers with more than 1,001 pigs account for about 28%, with year-on-year increase of 3 percentage.

From the perspective of farmers' regional distribution, according to the five regions divided by the ministry of agriculture for the prevention and control of African Swine Fever, the farmers in the northern region account for about 18%, with year-on-year increase of 8 percentage; the farmers in the eastern region account for about 47%, with year-on-year increase of 12 percentage; the farmers in the south central region account for about 10%, with year-on-year decrease of 12 percentage; the farmers in the southwest region account for about 10%, with year-on-year increase of 16 percentage; the farmers in the northwest region account for about 14%, with year-on-year increase of 8 percentage.

(IV) Food business

At the end of 2018, the company adjusted its organizational structure and classified poultry slaughtering as white-feathered poultry business in combination with the industry rules and the actual situation of the company, so as to strengthen the linkage

between production and sales with upstream breeding link. Therefore, the food business only includes pig slaughtering, deep processing of meat products, central kitchen and other subdivided fields.

Food business is the last stage before the consumption terminal of agricultural and animal husbandry value in the form of meat products. Among them, slaughtering, as a typical manufacturing industry, has developed for a long time in China and been reaching maturity. Moreover, due to the slow growth of the downstream meat consumption demand, there is a serious surplus of slaughtering capacity. It has been explained in the introduction of pig farming business before that, because the quantity of single batch for market in pig farming is smaller than that in poultry farming, and small slaughterhouses are sufficient for it, there is no strong motivation for the matching development of pig farming and large-scale industrial pig slaughtering in the early development. After the completion of the fattening of commercial generation, farmers can independently contact with pig dealers for sales, and then the pig dealers will sell the pigs to slaughtering plant or small slaughterhouses. Even though the proportion of large-scale farming has been increased in recent years, the annual number of pigs for market of large-scale farming settlements of large enterprises is mostly between 300,000 and 500,000, which is still far behind the annual capacity for market of at least 1 million in the common large-scale slaughtering plant. After the commercial pigs of current large enterprises are fattened, only a small part of them is directly contracted to the slaughtering plant, and a large proportion of them is still sold to pig dealers. Therefore, most pig farming and slaughtering enterprises in China are developed independently. From the perspective of the slaughtering plants, they often need to collect pigs through the pig dealers, and will also face the pressure of short-term shortage of pigs and overcapacity. The government's protection of the production enthusiasm of the breeding industry in the countryside and the stability of the consumer price level in the city also make the slaughtering industry face the implicit dual price restriction in the upstream acquisition and downstream sales. Occasional happening of livestock and poultry epidemics will also cause periodic panic of meat consumption and bring a negative impact to the industry. In addition, as a labor-intensive processing industry, its rising cost of labor further squeezes the profit margin of the industry. Therefore, the new growth opportunity of the pig slaughtering industry in recent years is to continuously optimize the process to improve the production efficiency and gradually introduce automatic and semi-automatic equipment to replace the labor. From the external perspective, on the one hand, the premium can be increased by improving the product structure, including from the slaughter and segmentation taking raw meat as the final product to the further processing of meat products and even the production of prepared dishes with higher added value, and from the sales of frozen meat to that of the chilled fresh meat; on the other hand, it is to improve the sales channels, that is, from the traditional multilevel wholesale channels more to direct supply channels of chain stores, chain restaurants, food processing enterprises and other large customers. Cooperate with product optimization and channel optimization to strengthen brand building, promote the transformation of unbranded meat into branded meat, and get more presentation in the sales channels, to obtain brand premium. In addition, the gradual development of the cold chain logistics industry in China in recent years is also conducive to the sales and direct supply of meat products in fresher status to supermarkets, restaurants and other channels.

The deep processing of meat products and the central kitchen are the downstream links of slaughter, and represent the extension from the simple slaughter and segmentation to the adjusting and processing links with higher added value. Compared with the slaughtering link, the products from the deep processing of meat products and the central kitchen have higher gross profit rate, and the growth rate is also faster in recent years. However, due to the influence of Chinese consumption habits formed over a long period of time, the purchase of raw meat still accounts for a very large proportion, while the purchase of meat products still accounts for relatively small proportion, which makes the current overall market space of the deep processing of meat products is still limited. In recent years, the focus of the deep processing enterprises is to constantly develop new product forms, change the monotonous situation dominated by ham sausage in the past, create new consumption scenes, stimulate more consumption demand for meat products, and expand the overall market space.

The central kitchen is a typical direction in the exploration of these new forms and new scenes. It takes prepared dishes as the main products and catering enterprises as the main customers. Through that product form and consumption scene which are more acceptable to consumers, it explores new growth opportunities. Of course, compared with the general deep processing of meat products, the central kitchen is more complex in the product form, processing technology, preservation technology, logistics support and other aspects, and puts forward higher requirements for the enterprise's management. In recent years, although there are many

enterprises, especially catering enterprises in the downstream, investing in the central kitchen, many of them are poorly run and create excess capacity in this subdivided field for the short term. On the contrary, the upstream food enterprises can gain a unique advantage in the field of central kitchen depending on rich experience of factory management and lean production.

The live pig is the main cost of the pig slaughtering, and the fresh meat is the main cost of the deep processing of meat products and the central kitchen, so the selling price of food business will change in the same direction as the upstream live pig quotation. However, due to the influence of meat substitute consumption, government's stabling consumption price level and such factors, the price elasticity of downstream meat is usually less than that of upstream live pig, and, when the quotation is going up, the food business will also, to some degree, bear the pressure of the increased slaughtering cost (i.e., purchase prices of live pig) and raw meat cost. Particularly, in 2019, due to the impact of African Swine Fever, the annual pigs for market decrease by 21.6%, and the annual pork output decrease by 21.3%. The prices of pigs, poultry, pork and poultry meat all increase significantly but to varying degrees. The pig slaughtering industry, the deep processing of meat products and the central kitchen industry still need to flexibly control the inventory, lean to reduce costs, and pay close attention to the prevention and control of the spread of African Swine Fever in pork and meat products, in order to be able to make profits in the seemingly booming market.

The company's food business has a certain influence in China, and holds the leading position in specific regions. Company's "Kinghey" brand pork is the designated supplier of 2008 Beijing Olympic Games, "Meihao" brand pork products' annual sales rank the second in the four provinces and cities of the southwest, "Liuhe" brand poultry meat products' sales coverage across the whole country, and the Porridge Jiahe central kitchen business, purchased by the company in the middle of the 2016, is also one of the largest central kitchen in Beijing market. In general, the company's food business and poultry slaughtering business are facing the same challenges of product upgrading and channel upgrading, but different from the poultry slaughtering business, which is the largest in China, the food business also faces the challenge of cross-regional market development. In a few years, the company will also make full use of the existing production capacity layout and channel advantages of the white-feathered poultry, combined with the future layout of pig farming, to promote the development of food business in a larger market in China, and promote the company's food brand to gradually grow from a local brand to a national brand.

II. Significant changes in major assets

1. Significant changes in major assets

Application Non-application

2. Major overseas assets

Application Non-application

III. Core competence analysis

(I) The company's core competence in the feed business: Concentrate on technology, innovate organization and product, bring a rapid improvement to scientific research ability, improve the bio-safety and performance of product, and use stronger product power to meet the upgrading of breeding demand. Based on scale barriers, transfer to specialization and industrialization, and the long practice and accumulation brings efficiency and cost reduction which competitors difficult to imitate, so the moat is wider and deeper.

1. The largest scale brings strong bargaining power and resource integration ability. Scale is the basis for the survival of feed enterprises. The larger the scale of feed factory, the lower the production cost per ton, which can decrease the purchase cost of raw materials. Therefore, scale is one of the most core competitive factors in the feed industry. The company's feed sales ranked the first in China and the third in the world, and feed production and sales has covered the China's 25 provinces, cities and autonomous regions. The industry-leading production and sales volume and the extensive market coverage enable the company to have the strength to connect with domestic and foreign grain business magnates and large channels of the same magnitude, and to bring strong bargaining power by virtue of its scale advantage. At the same time, with the scale of the country's first and the world's leading position, it is easy to connect with multinational magnates, leading enterprises in other industries and local governments at all levels

to carry out a variety of forms of cooperation, and the resources integration advantage is obvious.

2. Concentrate on technology, innovate organization, and continuously improve scientific research ability. Through many years of accumulation, the company now has built the industry's largest nutrition and raw material database of feed, works closely with several raw material suppliers at home and abroad, and timely grasps the nationwide quality information of raw material of feed, which can let the company establish optimal combination of nutrition and cost in a timely manner and reduce the negative effect brought by price fluctuation of raw material. The company's feed research institute now has 15 doctors and 102 masters. The company owns the leading near infrared detection technology, has established nearly 500 prediction models for 78 feed raw materials and more than 120 feed products. In recent years, the company has won 6 national science and technology awards, 8 provincial and municipal science and technology awards of ministries and commissions, and owns 6 national key laboratories or centers, 2 provincial key laboratories or centers and 2 academician and postdoctoral workstations. The company has successively undertaken 89 national, provincial and municipal key research and development projects, including *Configuration Technology Application and Demonstration of High-efficiency and Low-emission Feed for Meat Duck*, a key research and development plan of the 13th Five-year Plan. In 2019, the company undertook the national key research and development project of "Rapid Identification, Prevention and Control Technology System Research of Drug-resistant Bacteria Transferred Between Human and Poultry Based on Artificial Intelligence" together with the China National Center for Food Safety Risk Assessment and the University of Nottingham in United Kingdom, and presided over or participated in Shandong Province's key research and development project of "Key Technology Research and Industrialization Promotion of Environmentally Friendly Non-resistant Feed for Pig and Poultry". In recent years, the company has applied for 1,719 patents and obtained 979 licenses. In 2019, 230 patents were applied for, including 90 invention patents.

3. The procurement mode is constantly upgraded, and the professional procurement ability is continuously improved. Since 2014, the company has further managed and optimized raw material procurement system, strengthened the centralized procurement at different levels in various forms, actively carried out supplier system management through new management platform, and built strategic partnership with COFCO, Sinograin, Jilin Wine, Xiangyu, Cargill, Bunge, Yihai, DaChan and many other excellent raw materials suppliers at home and abroad, to get stable, reliable, inexpensive and excellent raw material supply in the upstream. In the past two years, due to the influence of the trade war between China and the United States, the African Swine Fever and so on, the changes of the raw material market were complicated. The feed supply chain system has rapidly strengthened the research center of the raw material market, the professional procurement ability has been significantly improved, and the procurement modes of corn, soybean meal, by-product and so on are continuously upgraded. In terms of corn procurement, the company has expanded the purchase of corn in the Northeast China at certain time, implemented the strategy of transporting corn from north to south, and harvested about 700,000 tons of corn directly from the producing areas in 2019. In terms of soybean meal procurement, the purchase flow was concentrated on the head enterprises to give full play to the advantages of collective procurement, and the cost was reduced through measures such as protein price difference, cross-regional arbitrage, bulk cargo logistics and precise feeding. In 2019, the collective procurement rate of the two grades reached 93%, the direct procurement rate of key varieties was about 90%, and the turnover rate of raw materials was also improved significantly. At the same time, the company actively carried out supply chain financing business, significantly reduced financial costs, and reached the cumulative financing income of about 38 million RMB. In addition, the company will take the construction of digital supply chain ecosystem as the goal, create a end-to-end procurement operation system with the guidance of digitization, and continuously improve the core competitiveness of procurement.

4. Fully serve farmers, and keep closer relation with downstream customers. Facing the serious African Swine Fever in 2019, many small and medium-sized farmers were in difficulties. Relying on its own strong strength, the company launched the "pig flourishing" project for small and medium-sized farmers, and, through various forms of cooperation, provided comprehensive supporting services such as technology and financial services to small and medium-sized farmers to help them continue pig breeding. The "everything flourishing" project, which are extended from the "pig flourishing" project, were also piloted in other feeds, such as aquatic product feed, ruminant feed and so on, and achieved ideal results. Fish flourishing, cattle flourishing, sheep flourishing, for example. Through the development of those projects, on the one hand, the company could avoid a sharp decline in the sales of pig

feed under the effect of African Swine Fever; on the other hand, the service and the support to farmers during the epidemic period greatly improved the service experience of farmers and further bonded the cooperative relation between farmers and the company.

5. The expansion of farming makes the product structure more balanced. The scale of farming increases the bargaining power of farming link, which means that it is increasingly important for feed enterprises to control the farming link. Since 2016, the company has gradually increased the development of pig farming, and made great efforts to develop the pig feeding business by adopting the method of "company + scale farmers". In recent years, the farming quantity of the company has increased rapidly. From 2019, the company has also gradually increased the self-feeding and entrusted feeding of commercial meat poultry in white-feathered poultry business, and directly controlled the farmers through multi-year breeding contracts. The company's feed business has strengthened its control over the farming link through the extension of the above industrial chains, the synergistic effect of feed and farming has improved the profitability of the feed business, the product structure is more balanced, and the competitiveness is greatly enhanced.

(II) The company's core competence in the white-feathered poultry business: Master the core technology of independent intellectual property rights in breeding, upgrade breeding facilities, continuously innovate data utilization, fast produce and fast sell relying on the bargaining power at both ends of the supply and marketing, and strengthen the market control

1. In the breeding of breeding poultry, the company's production technology management, cost management, production efficiency, and product quality are at the domestic leading level, and the company has formed a systematic technology and management ability. The company's each breeding hen remained producing over 115 healthy chicken in the past two years, and each breeding duck remained producing over 220 healthy ducklings, which are at the domestic leading level. Especially in the selection of breeding duck, the company cooperated with the Institute of Animal Sciences of Chinese Academy of Agricultural Sciences to breed "Zhongxin" Beijing duck with complete intellectual property rights, which broke the monopoly of foreign varieties and filled the gap of domestic breeding industry of white-feathered meat duck. From the perspective of consumption, "Zhongxin" Beijing duck has the characteristics of "high lean meat ratio, low sebum ratio and good meat quality". The ratio of breast and leg meat is as high as 28%, and the sebum ratio is lower than 22%, which improves the problem that some foreign varieties of duck meat are "too fat and fishy" and not suitable for Chinese taste. From the perspective of farming, "Zhongxin" Beijing duck has the characteristics of fast growth, high feed conversion rate, strong anti-stress, easy feeding and high survival rate, the ratio of feed to weight is up to 1.9:1 after 40 days of feeding, and the production indexes have reached the international advanced level

2. In the breeding of commercial poultry, the company has continuously increased investment and innovation in the farming link, enhanced demonstration ability and economic benefits, continued to promote the entrusted breeding model with the help of the poultry flourishing platform at the same time, and established close cooperative relations with nearly 30,000 farmers. It has increased the research, development and investment on farming equipment. In 2019, a total of 66 patents were filed, including 29 invention patents and 11 patents authorization. The company invested in the construction of the first domestic large-scale meat duck farm with three-layers wire net system for meat duck which has the internal supporting facilities of fan and wet curtain, automatic feeding line, superior water line, environmental control system and other automation equipment, and adopts the circular agricultural ecological operation mode with the combination of planting and breeding to pursuit the high efficient, green, and sustainable development of the industry. Compared with other sheds of the same condition, the cultivation quantity can be increased by more than 30%, the construction cost is lower, and the breeding efficiency is greatly improved. With the help of the automatic environmental control system, each shed with a farming capacity of 24,000 requires only one employee who can easily control intelligent lighting, automatic water line, feed line and excrement system. In 2019, to ensure the success rate of farming, the company has promoted the establishment of poultry production database, especially a unique set of meat duck's production database, which keeps detailed records on growth parameters, body length, body height, body weight, feed intake, water intake, temperature, humidity and the other key indexes from a number of meat ducks, for the hardware upgrades of farming equipments on the one hand, and for the development of farming technology specification on the other hand, so as to guarantee the industry leading farming index all the time.

3. In terms of poultry slaughtering, the company has the leading position with the largest scale and a larger market share in

the national slaughtering market of white-feathered poultry, especially in the field of white-feathered meat duck, and owns strong bargaining power when facing the downstream market. In the link of raw material supply, as the main production areas are concentrated in Shandong and surrounding areas, such as Henan, Hebei, Shanxi, Liaoning and so on, and the self-feeding proportion of commercial generation has been continuously promoted in recent years, there is stronger bargaining power in the poultry farming contract or market poultry acquisition in those regional markets. In the slaughtering and processing links, the company has presided over the formulation and revision of the industry standard of "Operation Rules for Livestock and Poultry Slaughtering - Duck" by virtue of the largest scale of duck slaughtering in China and the leading technical level. In recent years, through the construction and reform ways to improve the automatic and intelligent levels of the slaughtering plant, and also to strengthen the construction of standardization and streamline, plants constantly improve and optimize the existing operation and process standards in combination with actual conditions, so the flexible manufacturing ability and product premium ability are increased significantly, and the ability of fast production and fast sale is further strengthened. In the sale link, the company further promotes the policy of "formulating sale by consumption, formulating production by sale, and fast production and fast sale", which makes the inventory turnover rate of products stable at a high level, and overcomes the adverse impact of agricultural product price cycle fluctuations on the company's operation to some extent.

(III) The company's core competence in pig farming business:

1. Integrative pig breeding in settlement model highlights the cost advantage

The overall planned integrative pig breeding in settlement model, in a settlement to achieve full gathering of entire pig breeding processes, talent sharing, environmental protection technology optimization and industrial chain, has higher production efficiency and lower cost than the traditional breeding model.

Firstly, the industry-leading pig farm construction capacity and advanced production technology can effectively reduce the bio-safety risks of pig farms and ensure the healthy production of pigs. The process of production technology is more in line with the principle of integration for transport, field matching, separate production of sows and weaned pigs, automatic regulation of the environment in the house and reasonable planning of excrement and urine storage and transportation.

Secondly, the production efficiency is high, and each index is at the industry leading level. In the production of breeding pig, the company has cooperated with the most excellent international breeding pig companies of PIC and Hypor to establish a double-system breeding pig structure and select suitable pigs according to the differences between the south and north markets in China. In terms of breeding ability, the company adopts multi-angle combination of algorithm technology, dynamic core group management technology and automatic breeding pig determination technology, which are the most advanced breeding technology in the world. With the cooperation of breeding experts in universities of the United States and the Kingdom of Thailand, the algorithm is constantly optimized, and the intensity of breeding is improved. In the settlement model, each settlement has its own core propagation group, ensuring the bio-safety of breeding boars and the efficient production of piglets. In the whole year of 2019, the total number of piglets per litter, the number of live piglets per litter and number of weaned piglets per litter in the company are all leading in this industry.

Finally, through the application of the complete systemic production and management technology the cost of fattening pigs is continuously reduced. In recent years, the company has orderly implemented various application and practice of new technologies in the industry, and formed a complete set of production management technology system. Through the standardization of cost accounting projects and methods of all branch companies and refining the gained weight cost model to realize the comparison of cost management, the company can quickly find out each branch's cost control key indicators. Through the selfmade feed and nine stages of scientific and nutritious feeding during whole growth process, with the comfortable growth environment provided by automatic and intelligent pig farm, the full cost of fattening of the company's selfproduced piglets are at the industry leading level all the time.

2. National leading bio-safety prevention and control technology

After nearly a year of exploration, 57 research results have been obtained in the field of prevention and control of African Swine Fever in 10 categories. The closed-loop bio-safety prevention and control system has won the war to prevent African Swine Fever,

achieving a survival rate of more than 90% and leading the industry.

As for the prevention and control of the pig farm independently operated by the company, the company has effectively controlled the African Swine Fever the first time through the transformation of hardware facilities and the establishment of a scientific ASF management system. In the aspect of hardware facilities, the original pig farms are actively put into the transformation; all newly-built breeding pig farms adopt the latest safety standards for ASF prevention and control, and the four-level safety prevention and control system of red zone, orange zone, yellow zone and green zone in pig farms can effectively isolate ASF viruses. In terms of management system, build the ASF prevention and control organizations, formulate the bio-safety management standards and management processes at all levels, establish a complete set of scientific prevention and control work mechanism and the prevention and control program, set up the three-level management system from the headquarters to the section to the front-line management unit, which means the headquarters makes the unified command, the section gives daily tracking report, and each feed mills, breeding pig farms and slaughterhouses perform in strict accordance with the standard ASF prevention and control system, take flight inspection, point inspection, video monitoring and other ways guided by the headquarters, implement one-level regulatory system for monitoring the performance process and testing the results, so as to fully implement the unified standards from top to bottom in place.

For the prevention and control of fattening farms dominated by farmers' cooperative breeding, the company also carries out more strict management according to the prevention and control standards to ensure the safe production of live pigs and the production interests of farmers. Firstly, the company subsidizes and assists the farmers to complete the renovation and upgrading of the sheds, so that the breeding conditions can meet the ASF prevention and control standards. Secondly, the ASF inspection and monitoring was carried out on whole fattening process of the family farm, including site inspection before providing piglets, transportation vehicle inspection, feed plant inspection and materials inspection, and a timely reporting system. Thirdly, for biological assets and production safety, veterinary medicine management, environmental management and other standards, comprehensive upgrade has been made according to requirements for ASF prevention, farmers are repeatedly trained, and the standards are fully implemented and performed in place. The cooperative farmer's understanding of ASF is effectively improved through a series of measures, and farmers have gradually implemented in accordance with the standard through the way of "publicity, help, assistance and inspection", so that the the safe production of live pigs is effectively guaranteed.

3. Leading pigsty design capability for the future

The company has been following the concept of "meet the needs of pigs, meet the needs of pig farmers, and meet the needs of sustainable development" in the design of pig farms, to create a scientific and automated modern pig farms, both for the present use and the future needs, so that the comprehensive operation ability can win from the beginning. The present means paying attention to the details of production, scientific planning, and eliminating waste. For example, the established production patterns shall be equipped with the matched functional areas, pigsty and field; let the pig transport, logistics and other transport be clear, and meet the requirements of efficiency and bio-safety at the same time; meet the environmental needs of pigs in different climates and stages. The future means focusing on sustainable development need. For example, intensive construction of pigsty can be answerable for the scarcity of land; the action of environmental protection is irreversible, and pigsty construction achieves zero emissions; the intelligent design of mechanical automation of piggery can deal with the increase of labor cost.

4. Industry-leading environmental processing capacity

Environmental protection treatment of the plant includes three major sectors of sewage treatment, solid manure treatment and treatment of sick or dead pigs. In all processes of treatments, the company has a separate odor treatment method in order to fully meet the national standards of environmental protection objectives, leading the industry in environmental treatment ability. In terms of sewage treatment, the company adopts the "pre-treatment + UASB + two-stage A/O process", so that the effluent index is COD concentration $\leq 200\text{mg/L}$, ammonia nitrogen concentration $\leq 100\text{mg/L}$, reaching the standard of farmland irrigation and returning to the field directly. The company's treatment method of biogas slurry returning to field can make the bearing capacity of 1 mu of land reach 30 sows, which is far more than the industry's general level that 1 mu of land sows bears no more than 3 sows, so that, if the company build a farm with 12,000 sows, the supporting absorption land would be about 400-500 mu of land. In terms of solid

manure treatment, the company adopts the method of vertical fermentation tank, which is closed throughout and occupies a small area. Solid manure produced by a farm of 12,000 sows is treated in only 10-15 days. At the same time, it meets the national discharge standards, and the fermentation process can reach a high temperature of 60 to 70°C, which can effectively kill the pathogenic microorganisms in feces and avoid the spread of diseases. In addition, the vertical fermentation tank can also deal with sick and dead pigs produced in the plant, strengthening the prevention and control capacity of bio-safety.

5. Continuously innovate the sales method, and comprehensively improve the sales efficiency.

The company's self-feeding commercial pig is completely sold in accordance with the unified plan of pig sales method, to ensure the optimal price of large pigs on the market sales. Only a small number of live pigs can be transported to slaughtering plant in the system for slaughter, other live pigs are sold through the "pig easy", a pig trading platform, developed by the company. After one year's accumulation, the system of that trading platform is becoming more and more mature in algorithm and trading data, guiding pig sales through the generated pig price index, forming regional price comparison and monitoring, and assisting in improving the company's average pig sales price.

(IV) The company's core competence in the food business: The whole industrial chain is full of high-quality resources, food is safe and traceable, and branding channels gradually upgrade.

1. In the terms of products: Safety, precise research and development, and flexible production of the whole industrial chain. Relying on the advantage of company's whole agriculture and animal husbandry industry chain, the company's food business can get safe raw material of the livestock and poultry, which is controlled in the upstream links of the feed, breeding and cultivation, truly achieve food safety from the farmland to people's dinner table through the safe production of slaughter and processing links, and send the safest and most confident fresh chilled meat to the customers' table. In 2018, the company established the food industry research institute and set up an excellent food research and development team for product development. The strong research and development strength support us to develop a variety of To B and To C products for clients and consumers at the food end. The company is in the capacity of standardized and efficient production, has participated in the formulation of "The First Part of Fresh or Frozen Pork and Pork By-products GBT 9959.1-2019: Pork Slices" and other national standards, also constantly improves the level of automation and intelligent by construction and reform in recent years, and constantly strengthens the construction of standardization and processize, while the factories constantly improve and optimize the existing operation and process standards in combination with actual conditions, and the flexible processing ability and the product premium ability have increased significantly.

2. In the terms of branding: Newly build the advantage combination of mother and child brands. New Hope Liuhe holds the head position in the agriculture and animal husbandry and the food industry, but, in the background of new era with consumption upgrade, the food sector is also increasing the pace of new layout. The "New Hope Food", as a mother brand, has the high-class resources of whole agriculture and animal husbandry industry chain as the backing whether in the To B end of "New hope Liuhe" or To C end of "New Hope Food" to make the mother brand's vitality more powerful. Kinghey, Liuhe, Meihao and Porridge Jiahe, as the child brand, have also been recognized by the industry's customers and partners. Those are the brand advantages we have accumulated over the past 30 years in the agriculture and animal husbandry and the food industry. In May 2019, the company entered the top 100 listed companies by brand value, and its brand value is 62.9 billion RMB, ranking the 50th in the overall list and the 50th in the overseas list.

3. In the terms of sales channels: The advantages of traditional channels are stable, and the emerging channels are growing rapidly. The company has operated the whole agriculture and animal husbandry and the food industry chain for many years, further consolidates and strengthens the traditional circulation channels such as wholesale market, agricultural trade and raw material processing, and synchronously upgrades and moves forward the development of new channels under the background of intensified market competition and consumption upgrade. At the To B end, we focused on the catering market of 4 trillion, established a professional sales and service team, and provided long-term services for Haidilao, Kungfu, Yunhaiyao and other catering enterprises, and won the honor of quality suppliers for many times. At the To C end, we have made good progress in the supermarket and e-commerce channels. In the terms of supermarket, at present, we have settled in Wal-Mart, RT-Mart, Yonghui, Carrefour, Hema, Wumart, Metro and other national key supermarket customers, with a total of 2,000 stores. In the terms of e-commerce, the company

has deeply cultivated JD platform and achieved rapid sales growth in key activities such as 618, double 11, double 12, etc., obtaining the top three in the share of category. At the same time, we have actively layoutted new retail and new format, and carried out comprehensive cooperation with Ali Retail System, JD New Channel, Meituan B2B, Country Garden Phoenix Selection, Midea New Kitchen Technology and other emerging channel customers, and make continuous innovation and upgrading of products and supply chain. Relying on the advantages of the whole industrial chain, we will continue to optimize and upgrade the channel structure, do a good job in value-added services through the integration of internal and external resources, constantly improve the premium ability of products and services, and build competitive barriers.

Section 4 Discussion and Analysis of Business Situation

I. Overview

In recent years, the company has been adhering to the medium-and long-term strategy of "strengthening the feed business, expanding pig business, refining meat and poultry business, providing excellent food, and deepening overseas markets", creating a balanced layout of diversification of inter-industry livestock and poultry and integration of intra-industry agriculture and food. The company committed to becoming a high-quality blue-chip enterprise with stable growth, a modern enterprise in leading the industry's scientific and technological innovation, the vanguard of the internationalization of Chinese agricultural and animal husbandry food enterprises, a investor-friendly company, and a good company that actively assumes social responsibility.

In 2019, the domestic agricultural and animal husbandry industry suggests a situation of simultaneous rise of pigs and poultry from the perspective of market, but in terms of business environment the situation is different. In the pig industry, African Swine Fever continues to spread in more provinces across the country from north to south. Although pig prices have gone out of the bottom area and rose sharply in the second half of the year, attracting enterprises and farmers to start mending again, the situation of prevention and control of African Swine Fever is still grim. It is difficult for the whole industry to increase production. At the end of the year, the number of live pigs on hand decreased by 27.5%, and the number of live pig sales decreased by 21.6% for the whole year. In the poultry industry, the upswing that began in the middle of last year has continued to this day under the blessing of the poultry meat substitution effect caused by African Swine Fever, but the long-term operation of high poultry prices has also triggered another round of capacity expansion of poultry breeding. As a result, the relationship between supply and demand in the industry has been reversed. The inventory of white-feathered broiler throughout the country has increased by 11.8% year-on-year, and poultry production has also increased by 12.3% over the same period last year, gradually increasing the risk of oversupply. In the feed industry, African Swine Fever has led to a substantial reduction in demand for pig feed, but large feed enterprises with balanced business and a full range of feeds can get opportunities for the growth of poultry feed from the strong demand of the poultry industry. The repeated trade frictions between China and the United States still make the import of bulk agricultural products face great uncertainty, but compared with the outbreak last year, Chinese enterprises already have a calmer state of mind and richer ways to deal with it effectively and defuse the risk. The No. 1 document issued by the Central Committee in early 2019 further emphasized the decisive victory in poverty alleviation on the basis of focusing on the themes of agricultural modernization, supply-side reform and development of new momentum in the past five years, and also pointed out the direction for the current company's development strategy to combine social comprehensive benefits.

In order to support the smooth operation of diversified business portfolios and integrated business models, and to further enhance specialized business capabilities, the company optimized and adjusted its organizational structure at the end of 2018, changing the region-oriented architecture which was adopted to ensure a smooth transition since its reorganization and listing in 2011 to a business-oriented architecture. The company set up five strategic business units: feed BU, poultry industry BU, pig industry committee, food industry group and overseas special zones. The year of 2019 is the first year that the company operates with the new structure of five strategic business units with all businesses running well, professional capabilities further improved, and feed, poultry, food and overseas have all achieving varying degrees of growth. The pig industry has also intensified its development while resisting African Swine Fever. In terms of capital operation, the company completed the increase of shares of major shareholders in 2019, implemented the company's share repurchase and equity incentive plan, and successfully completed the issuance and listing of 4 billion Yuan of convertible bonds at the beginning of January 2020. With the assistance of the capital market's supporting to industrial development, the company effectively safeguards the interests of most investors, achieves the common development of the management team with the company as a whole and most shareholders, and continuously enhances the investment value for shareholders. By virtue of its excellent performance in environmental, social and corporate governance (ESG), the company was rated as A by International Institute of Green Finance, CUF, ranking in the top 20% of the selected companies. Through the above efforts, the company achieved a total

business income of 82.051 billion Yuan during the reporting period, a year-on-year growth of 12.987 billion Yuan, with the increase rate of 18.80%. The company also achieved the net profit of 5.042 billion Yuan belonging to the shareholders of the listed company, an increase of 3.337 billion Yuan over the same period last year with the increase rate of 195.78%.

(I) Feed business: Strengthen the production and marketing of technical sourcing, and steadily increase the gross profit of sales

Feed business is still the main pillar of the company. In recent years, the company insists on improving its competitiveness from many aspects, such as product power, buying power, manufacturing, service and so on, to promote the growth of feed business.

1. Strengthen product power: continuous optimization of product structure and remarkable achievements in new product development. The company has strengthened the iterative upgrading and development of its products, and the growth rate of special aquatic feed and ruminant feed with high gross profit has reached more than 50%, which is substantially ahead of the overall level. Aiming at the demand for live pig supplements after African Swine Fever, the company optimized earlier stage pig feed, developed "hearty three meals", and other new products, and achieved good results; the company's first bio-environmental feed sales in the country exceeded 2.1 million tons, with an annual sales increase of more than 100% compared with the same period last year, ranking first in similar products. The company also increased functional aquatic products sales by more than 200% year-on-year, improving shortcomings in the aquatic product portfolio.

2. Strengthen buying power: expand the base for deep cooperation, enhance synergy and boost the connectivity of finance. The company strengthens the raw material market research center and continues to upgrade the purchasing mode of corn, soybean meal, by-products and other varieties. In the aspect of corn procurement, our company should seek proper timing to expand the purchase of corn from the northeast area and implement the strategy of transporting grain from the north to the south, and the direct sourcing of more than 700,000 tons will be realized in 2019. In the aspect of soybean meal procurement, our company should concentrate the purchase flow to the head enterprises, give full play to the advantages of collection, and reduce the cost through measures such as protein price difference, cross-regional arbitrage, logistics in bulk, precise use of materials and so on. In 2019, the two-stage collection rate reached 93%, the direct recovery rate of key varieties was about 90%, and the raw material turnover rate also increased significantly. At the same time, the company actively carried out supply chain financing business, greatly reduced financial costs, and achieved a cumulative financing income of about 38 million Yuan.

3. Strengthen manufacturing: promote lean cost reduction to improve efficiency, distribute large factories to optimize production capacity. On the one hand, the company continues to promote various lean production improvement actions, and keep the rate of per-ton feed production expense stable in the context of a substantial increase in African Swine Fever prevention expenditure throughout the year; on the other hand, it continues to invest in the transformation and upgrading of production facilities to build professional factories. The number of factories with annual sales of more than 120000 tons increased by 15 to 54, the number of factories with annual sales of more than 200000 tons increased by 4 to 8, and 16 new professional aquatic feed lines are added.

4. Improve service quality: provide technical and financial comprehensive services, empower farmers and help breeding. As African Swine Fever continues to ravage the country in 2019, pig farmers suffer heavy losses, and even face the grim situation of withdrawing from farming. The company launched the "Pig Wang" project to support farmers who are skillful and willing but unable to recover after the loss. On the one hand, the company provides a variety of financial support, such as external agricultural funds, and on the other hand, offers technical services to help them improve their ability to resist African Swine Fever. The "flourishing pig" project extends to the "everything flourishing" project, which improves customer service in poultry, aquatic products, ruminants and other materials through similar services. This not only drives feed sales, but also enhances customer satisfaction and customer stickiness.

During the reporting period, the company sold a total of 18.72 million tons of various feed products, an increase of 1.68 million tons over the same period last year, with the increase rate of 9.9 percent (the total amount of feed in the country decreased 3.7 percent over the same period last year). The product structure was also further optimized. Pig feed sales were 3.98 million tons, a decrease of 420000 tons from the same period last year, with a drop of 9.5 percent. (the national pig feed was down 26.6 percent from the same period last year). The sales of poultry was 13.19 million tons, an increase of 2.30 million tons, or 21.2 percent, among which the sales of the market-oriented export of poultry was 11.30 million tons, an increase of 1.54 million tons, with the increase rate of 15.8

percent (the year-on-year national poultry feed increased by about 17.1 percent). The aquatic food sales volume was 1.19 million tons, an increase of 130,000 tons over the same period last year, with the increase rate of 11.3 percent (the national aquatic products increased by about 0.3 percent year-on-year). The company achieved the business income of 42.431 billion Yuan, an increase of 3.012 billion Yuan over the same period last year. The overall gross profit margin level of feed has also been synchronously raised, achieving a record high gross profit since the establishment of the company of 3.437 billion Yuan, an increase of 435 million Yuan over the same period last year, with the increase rate of 14.50%.

(II) White-feathered poultry business: List and promote Zhongxin Duck, and develop production base to improve direct supply

White-feathered poultry business is an important basis for the development of the company. The current mode of the company engaged in the poultry industry is "poultry breeding + commercial generation with centering on traditional contract breeding / self-feeding and entrusted breeding as auxiliary + poultry slaughtering". The overall profit and loss level of this model will change with the rise and fall of the prices of breeding poultry, commercial generation chickens and ducks, and poultry meat in the same direction. However, in the process of commercial generation breeding, as the company's current self-feeding and entrusted breeding capacity is less than the slaughtering capacity, the company will also bear the pressure of increasing slaughtering costs (that is, the buyback price of chickens and ducks) to a certain extent in the upward period of the market. In 2019, the poultry industry market has generally improved due to the substitution effect caused by African Swine Fever. While doing a good job in daily operation, the company strives to make up for the shortcomings in the industrial chain, focusing on promoting the transformation of commercial generation breeding from traditional contract farming to self-feeding or entrusted breeding, to continuously improve profitability.

1. List and promote Zhongxin Duck and make a profit by grasping the market. In the process of poultry breeding, the "Zhongxin Lean Peking Duck" jointly cultivated by the company and the Chinese Academy of Agricultural Sciences with complete intellectual property rights received the certificate of new livestock and poultry breeds (matching system) issued by China National Commission of Animal Genetic Resources in April 2019, and officially listed on the market. After a series of internal and external promotion work, the amount of parent breeding ducks on hand has exceeded 2 million by the end of 2019, accounting for about 6% of the total inventory size of the industry. In addition, during the upward period of the poultry market, the company makes use of the surplus capacity of the hatchery to actively carry out the business of purchasing eggs for hatching, and seize the favorable market to increase the profits of the poultry business.

2. Speed up the construction of the base and increase the proportion of direct supply. In the process of commercial generation breeding, the company continues to pay attention to the construction of commercial generation self-support base, and has completed the construction of 17 commercial generation self-support farms throughout the year, making the number of commercial generation self-support farms reaching 57 and the annual production scale of commercial generation chickens and ducks exceeding 74 million. At the same time, nine commercial poultry farms have started, thirteen commercial poultry farms are under construction, and nearly 75 million new annual production capacity can be added in the future. Through the demonstration effect of self-feeding farms, coupled with the provision of other comprehensive services to farmers, such as upgrading of sheds, technical and financial support, and even helping some pig farmers to transform pig sheds into duck sheds in the context of African Swine Fever, the company strives to increase the proportion of direct supply (including self-feeding, entrusted feeding, more than two-year continuous breeding contracts). In the whole year, the proportion of direct supply reached 71% in the chicken industry and 41% in the duck industry. Self-feeding farms and direct supply farmers will greatly enhance the company's long-term profitability in the poultry industry.

3. Optimize the product distribution channel and increase the sales premium. In the poultry meat sales link, on the one hand, the company strengthens the sales of fresh products and customized products for high-end customers in terms of product structure; on the other hand, in terms of channel structure, it strengthens the development of close customers, as well as superior sales channels such as food processing raw materials, catering, and supermarket or chain stores outside the traditional wholesale markets. The sales volume in 2019 in these three categories of superior channels increased by 10.6% compared with the same period last year.

During the reporting period, the company sold a total of 500.30 million baby chickens and baby ducks, an increase of 42.76 million compared with the same period last year, with the increase rate of 9.4%, the company sold 323.92 million commercial chickens and ducks, an increase of 63.31 million over the same period last year, with the increase rate of 24.3%; the company

slaughtered 725.90 million chickens and ducks, an increase of 30.48 million over the same period last year, with the increase rate of 4.4%; the company sold 1.81 million tons of chicken and duck meat, an increase of 19,000 tons over the same period last year, with the increase rate of 1.1%; the company achieved business income of 21.359 billion Yuan, an increase of 2.712 billion Yuan over the same period last year, with the increase rate of 14.54%; the company achieved gross profit of 2.275 billion Yuan, an increase of 683 million Yuan over the same period last year, with the increase rate of 42.89%.

(III) Pig breeding business: Innovate in “three-round” development model, and strictly prevent the acceleration of African Swine Fever development

Pig farming is a major measure of the company's strategic transformation. In 2019, in the face of the unfavorable environment of the expansion and spread of African Swine Fever, while doing a good job in prevention and control, the company actively responded to the national policy to restore pork production and supply, increase investment and production, and achieve rapid overtaking in corners in the crisis, gradually making the pig business become a new growth pole of the company.

1. The prevention system of African Swine Fever is becoming more and more mature, and the cost of production safety is strictly controlled. The spread of African Swine Fever in the country has not only led to a sharp decline in live pig slaughtering and a sharp rise in pig prices, but also brought great challenges to the safe production and survival of enterprises. The company continues to iteratively upgrade prevention and control methods and hardware facilities. In the pig feed factory, special funds are invested to upgrade and transform the systems of washing, testing, production and information, strengthen the strict disinfection of the whole process, strictly control the modulation temperature of 85 °C for three minutes, and purchase high-specification special feed vehicles at the same time to achieve special-purpose, point-to-point transportation and ensure the safety of transportation. In the company's own pig farm, the company establishes a four-level regional prevention and control system, sorts out risk carriers, identifies hundreds of risk control points, installs cameras, and monitors key links. For cooperative breeding households, first of all, maintain a strict standard for entrance, select high-quality farmers according to hardware conditions to carry out cooperation; secondly, help cooperative farmers upgrade facilities, do a good job in disinfection and isolation, and provide living materials for collection and distribution, so that they can feel at ease to do a good job in raising pigs. The company has set up nearly 20 testing laboratories across the country, comprehensively used fluorescent quantitative PCR to form a three-level detection system and to identify risk factors in a timely manner. Finally, the company has also developed a special reward and punishment mechanism for the prevention and control of African Swine Fever to ensure that all requirements are strictly implemented. The excellent experience and practices summarized by the company in the prevention and control of African Swine Fever have been gradually recognized by the whole industry. The company's pig industry researchers participated in writing "Nine Key Technologies for Preventing and Controlling African Swine Fever and Resuming Pig production" published in the Farmers' Daily. The rapid sampling equipment developed by the company, such as living inguinal lymph node sampler and cotton rope oral fluid collector, has also been widely used in the industry. The company's live pig listing rate reached 90% for the whole year. Effective prevention and control of African Swine Fever combined with the high-efficiency and low-cost breeding method that the company has always had in the past, the complete cost of fattening piglets can still be maintained at 13.0 Yuan / kg under the background that 90% of the fattening pigs are completed by cooperative farmers, an increase of less than 1 Yuan compared with 2018, continuing to maintain a leading level in the industry.

2. Develop in “three-round” model to obtain resources, and improve efficiency and speed up construction. African Swine Fever has greatly reduced pig production capacity across the country, and it has also brought room for advanced production capacity with a higher level of production efficiency and safety. The company promptly put forward the "three-round development model", that is, the whole regional planning, the layout of the whole industrial chain and the harmonious development of the whole ecology, to help local governments solve many pain points such as industrial development, food taxation, environmental protection governance, poverty alleviation in rural areas, and so on. It also helps companies to obtain land resources and policy support more efficiently. In terms of engineering construction, the company continues to optimize the process, strive to shorten the project cycle on the premise of ensuring high quality, set up new engineering recruitment centers, strengthen the project management team, and make remarkable progress in cost control, project acceleration and quality control. Especially after entering the winter of 2019, the company adjusts measures to local conditions, makes innovative breakthroughs, greatly accelerates the progress of construction through a variety of

technical means to avoid low-temperature shutdown in northern projects. For the challenging goal of "two 180 days" for pig raising investment project, the company has 18 projects to complete the formalities within 180 days, and 8 projects to complete the construction within 180 days. By the end of 2019, the company has put into operation project with the production capacity of 10 million pigs, the construction capacity of 6.5 million pigs. The company's fixed assets and the balance of construction in progress increased more than 200% at the end of 2019. Other projects that have completed land contracts or reserves have a production capacity of more than 43.5 million heads of pigs, with a theoretical maximum production capacity of more than 60 million.

3. Steadily carry out outsourcing cooperation, and supplement production capacity and obtain support from farmers. The provincial isolated prevention and control after the outbreak of African Swine Fever has had a serious impact on the company's breeding, piglet transportation and pig production in pig farms. At the beginning of 2019, the company adjusted its business strategy in time, increased the efforts to purchase piglets, selected the leading enterprises or professional pig breeders with strong strength and good reputation nearby, and combined with the contract of quality guarantee setting and testing in various links, to reduce the risk of epidemic disease as much as possible, and speed up the release of piglets on the basis of ensuring safety and profit. Although the outsourcing of piglets increases the cost of breeding to a certain extent, it helps the company to lock in advance a number of farmers who have good foundation but dare not resume production due to the lack of guidance and support in the context of African Swine Fever. This is helpful for the company to carry out the cooperative breeding business after the release of self-produced piglet production capacity. Even in the summer and autumn of 2019, facing the unfavorable situation of African Swine Fever spread in the south, the complete cost of fattening piglets purchased by the company for the whole year could still be controlled at 17.3 Yuan / kg. With the gradual increase of self-produced piglets in the company later, the proportion of purchased piglets will gradually decrease, and the impact on the overall cost of pig-raising business will also be reduced.

4. Reserve talents and funds, and support long-term development. In the reserve of talents, the company's pig industry has more than 10,000 employees, which can support the demand for talents on a production scale of 12 million heads of pigs. In terms of capital reserves, the company has a comprehensive credit line of more than 60 billion Yuan from several financial institutions around the world. The proportion of used credit line is not more than 30% at present, and the average financing cost for the whole year is less than 3.8%. It has absolute competitiveness in the industry. In addition, the company also completed the review of the board of directors on the listing of 4 billion Yuan of convertible bonds at the end of 2019, and successfully completed the issuance and listing at the beginning of January 2020.

During the reporting period, the company sold 384,900 breeding pigs and piglets, 3.165 million fattened pigs, 3.5499 million in total, an increase of 996,200 over the same period last year, with the increase rate of 39.0%; the company achieved operating income of 7.487 billion Yuan, an increase of 4.262 billion Yuan, with the increase rate of 132.16%; the company achieved gross profit of 2.885 billion Yuan, an increase of 2.362 billion Yuan over the same period last year, with the increase rate of 451.15%.

(IV) Food business: Continue to optimize product sales channels, and ensure safety and help epidemic prevention

Food business is the direction of the company's long-term transformation and development. At the end of 2018, the company adjusted its organizational structure and classified poultry slaughtering as white-feathered poultry business. The adjusted food business only included pig slaughtering, deep processing of meat products, central kitchen and other subdivisions. In 2019, the company's food business, on the one hand, is facing the severe situation of prevention and control of Africa Swine Fever; on the other hand, it also bears the cost pressure of rising pig prices and poultry prices to varying degrees. The company continues to optimize and upgrade from the two major aspects of sales channels and products to ensure the steady growth of food business profits.

1. Entering hot pot industry to increase the proportion of non-wholesale channels. The company continues to optimize the sales channel structure, through the development of hot pot and catering channels such as Wanchai Wharf, Haidilao, Yonghui supermarket, etc., to further increase the proportion of non-wholesale channels, among which the proportion of fresh pork non-wholesale channels increased from 46% to 58%, and the sales of pork products food and beverage channels increased by 133% compared with the same period last year. In addition, the company has also made new breakthroughs in the new retail channels, the company has in-depth cooperation with Freshhema, with "daily fresh" fresh pork, Small Crispy Meat and other products hitting shelves in Freshhema stores.

2. Create new popular products and optimize product structure. In 2019, the company has launched a number of new products,

such as Small Crispy Meat, "Zhi Chu" series of traceable pork products and other new products. Among them, Small Crispy Meat began to gain momentum in the middle of the year, mainly relying on sales in the second half of the year. Its sales exceeded 140 million Yuan, and stationed in Haidilao, Freshhema and other well-known catering terminals, becoming the company's star products. During the reporting period, the share of high premium categories increased to 38%, and the proportion of sales categories with high gross profit for emerging channels such as supermarkets, e-commerce and new retail increased to 15%. Popular new product development and emerging channel breakthroughs form an organic combination, which on the one hand lays a good foundation for the follow-up introduction of more new products by taking hot sales as the fulcrum, on the other hand, brings word-of-mouth impact for new products to win more customers by taking the head customer as a demonstration.

3. The market in Sichuan is sinking and the high developing speed outside Sichuan is expanding. Pork products, as the company's traditional advantageous products, have always had a strong market influence in the core cities of Sichuan, but their market influence outside the region was limited in the past. In 2019, the pork products business focused on the market sinking in Sichuan and the market expansion outside Sichuan, and achieved excellent performance. Sales in the secondary market in Sichuan increased by 23%, of which the county-level market increased by 27%. Sales outside Sichuan were increased by 47%, especially in the northwest region, which grew by more than 200% for the whole year. The downward and outward market development will help the brand to achieve national expansion, form a comprehensive docking between the food industry and the pig industry in a larger area in the future, and pave the way for opening the animal husbandry and food industry chain across the country.

During the reporting period, the company sold 233,000 tons of pork products, a decrease of 45,000 tons over the same period last year, with a drop of 16.1% (the national pork production dropped by 21.3%), mainly caused by African Swine Fever; sales of all kinds of deeply processed meat products and prefabricated dishes are 177,000 tons, an increase of 27,000 tons, with the increase rate of 18.3%; the company's food business achieved operating income of 7.149 billion Yuan, an increase of 1.714 billion Yuan over the same period last year, with the increase rate of 31.53%; the company's food business achieved gross profit of 963 million Yuan, an increase of 261 million Yuan over the same period last year, with the increase rate of 37.18%.

The company should comply with the disclosure requirements of "Industry Information Disclosure Guideline No. 1 of Shenzhen Stock Exchange – Listed Company Engaged in Livestock and Aquaculture Business"

Applicable Not Applicable

The company always regards scientific and technological innovation as the power source of the company's development, adheres to the innovation-driven strategy, and realizes the transformation and upgrading of the development of traditional animal husbandry industries. Since the company comprehensively promoted the strategy of "science and technology leadership", it has comprehensively laid out the four strategic priorities of breeding, animal healthcare protection, big data and intelligent breeding, and accurate products. Science and technology have gradually become the core driving force of the company's development, and R & D investment has continued to increase. Across the complete animal husbandry industry chain, the five industrial specified technology research institutes, the animal healthcare protection center and the Safety Health and Environmental protection department assist the company's sustainable development in six areas, including feed, pig industry, poultry industry, information technology, food processing and safety, and animal healthcare protection.

On the basis of its "multi-in-one" technology research and development team, the company carries out extensive and in-depth exchanges and cooperation with Zhejiang University, China Agricultural University, Nanjing Agricultural University, Chinese Academy of Agricultural Sciences, Iowa State University and other universities and scientific research institutes, as well as American United Feed, DuPont, France Science and Technology Lixin Group and other cutting-edge areas such as animal nutrition, environmental protection and epidemic control, meat processing, etc.

In 2019, the scientific research units of the company carried out a total of 35 key research projects in feed, pig, poultry, information, food and other directions. In feed research and development, the company focuses on "systematic construction", "institutionalized construction" and "process construction" to carry out key research on feed products such as pigs, poultry, aquatic products, ruminant and other feed products, creating market leading products represented by "heart series" of weaned pig feed products. Biological and environmental protection feed sales exceeded 2 million tons. In the aspect of pig raising research, the company carries out researches focusing on African Swine Fever prevention and control detection, precise breeding, live pig production, gene breeding, equipment research and so on, and participates in one major national livestock and poultry project. In the research of poultry industry, three key research projects such as "Zhongxin Duck breeding" were carried out. Zhongxin Duck obtained the certificate of new breed (line) and went on the market to promote it, which comprehensively improved the technical level of meat duck breeding in China, solved the problem of breeding efficiency faced by meat duck industry, and comprehensively raised the company's technical level in breeding. In terms of information research, through the construction of big data breeding model and e-commerce platform, the company ensures the asset safety of the farms under African Swine Fever, reduces the management cost and improves the efficiency of the sales process, and realizes the standardization of pig breeding process, the overall digitization of live pig sales and the digital marketing of feed industry. In terms of food research, the company carries out research on pork preservation and quality improvement, key technologies for prefabricated food processing, food fermentation technology and the development of nutritious and healthy meat products. The development and application of a series of technologies not only improve the quality of products, but also reduce the production cost and time cost by about 50% and 60% at the same time. In terms of safety and environmental protection, research on quality and safety optimization and disinfection technology of livestock and poultry products, and ultrasonic steam physical

sterilization technology have been carried out to further develop product branding and equipment application fields while improving product quality and safety, helping to build a chain-like quality and safety system for breeding, breeding cultivation, slaughtering and processing. In terms of animal healthcare protection, the central laboratory has passed 50 CMA certification projects, significantly reduced testing costs, and ensured healthy development of our company's livestock and poultry industry by optimizing the testing and certification system for a series of livestock and poultry diseases.

The company has undertaken 89 national, provincial and municipal key R & D projects such as the 13th five-year plan of *Application and Demonstration of High Efficiency and Low Discharge Feed Configuration Technology for Meat Duck*. In 2019, the company, together with the National Food Safety risk Assessment Center and the University of Nottingham in the UK, undertook the national key research and development project "Research on Rapid Identification and Prevention and Control Technology System of Drug-resistant Bacteria Transmitted by Human and Poultry Based on Artificial Intelligence", presided over or participated in 8 provincial and ministerial projects such as the key research and development project of Shandong Province, "Key Technology Research and Industrialization Promotion of Pig and Poultry Environment-friendly Non-resistant Feed", and "Key Technology Research and Industrialization of Zhongxin White-feathered Meat Duck Breeding" in Taishan leading talents. The company also presided over or participated in the formulation and revision of 8 national standards such as *GBT 9959.1-2019 Fresh, Frozen pork and Pig By-products Part 1: Sliced Pork* and industry standards such as "Livestock and Poultry Slaughtering Pperation Rules: Duck. In terms of patents, the company applied for a total of 1719 patents, with 979 granted, and applied for 230 patents in 2019, which included 90 invention patents.

In 2019, the company won two provincial and ministerial science and technology awards, such as the first prize of the National Agriculture, Animal Husbandry and Fisheries Harvest Award, and the first prize of scientific research achievements of Shennong China Agricultural Science and Technology Award. The company has won 6 second prize of national scientific and technological progress such as *Research and Demonstration and Promotion of Nutrition Control Technology for Healthy Pig Breeding (2008)* and 17 provincial and ministerial scientific and technological awards.

Through setting up a platform, focusing on innovation, attracting talents and strong investment, the company has effectively integrated domestic and foreign technological resources, achieved complementary advantages and strong cooperation, and made a great breakthrough in solving common technological problems in the development of the agriculture and animal husbandry industry. At the same time, with the help of the company's industrial layout, the company has promoted better transformation of technological innovation and scientific and technological achievements into productive forces, and continued to promote the transformation and upgrading from traditional production enterprises to scientific and technologically innovative enterprises.

Research and development investment of the company

	2019	2018	Changing proportion
Number of R & D personnel (person)	711	464	53.23%
Proportion of R & D personnel	1.01%	0.75%	0.26%
Amount of R & D investment (Yuan)	174,211,791.11	94,953,158.80	83.47%
Proportion of R & D investment to operating income	0.21%	0.14%	0.07%
Amount of R & D investment capitalized (Yuan).	0.00	0.00	
The proportion of capitalized R & D investment in R & D investment	0.00%	0.00%	

The reason why the proportion of total R & D investment in operating income has changed significantly compared with the previous year

5. Cash flow

Unit: Yuan

Item	2019	2018	Year-on-year increase or decrease
Subtotal cash inflows from operating activities	87,354,470,144.13	72,831,823,164.96	19.94%
Subtotal cash outflow from operating activities	82,917,577,113.09	69,494,836,364.87	19.31%
Net cash flow from operating activities	4,436,893,031.04	3,336,986,800.09	32.96%
Subtotal cash inflows from investment activities	2,193,314,270.76	1,988,168,125.73	10.32%
Subtotal cash outflow from investment activities	10,930,603,052.89	4,379,761,713.88	149.57%
Net cash flow from investment activities	-8,737,288,782.13	-2,391,593,588.15	-265.33%
Subtotal cash inflows from fund-raising activities	23,564,491,686.88	11,793,840,158.26	99.80%
Subtotal cash outflow from fund-raising activities	18,869,913,221.33	10,391,217,904.20	81.59%
Net cash flow from fund-raising activities	4,694,578,465.55	1,402,622,254.06	234.70%
Net increase in cash and cash equivalents	321,360,989.13	2,345,305,271.00	-86.30%

The main factors affecting the significant changes in the relevant data compared with the same period last year are explained

Applicable Not Applicable

The increase of 32.96% in net cash flow from operating activities was mainly due to better operating performance of the current period, resulting in an increase in operating cash flow;

The increase of 149.57% in the subtotal cash outflow from investment activities was mainly due to the increase of fixed assets investment in the pig industry of the company in the current period.

The increase of 265.33% in net cash flow from investment activities was mainly due to the increase of fixed asset investment in the pig industry of the company in the current period;

The increase of 99.80% in subtotal cash inflow from fund-raising activities was mainly due to the increase in loan obtained in the

current period;

The increase of 81.59% in subtotal cash outflows from fund-raising activities was mainly due to the increase in loan repayment in the current period;

The increase of 234.70% in net cash flow from fund-raising activities was mainly due to the increase in loan obtained;

The decrease of 86.30% in net increase in cash and cash equivalents was mainly due to the decrease in net cash flow from investment activities.

An explanation of the reasons for the significant difference between the net cash flow generated by the company's operating activities during the reporting period and the net profit of the current year

Sources of funds for derivatives investment				Self-raised by the company									
Case involved (if applicable)				Not Applicable									
Disclosure date of derivative investment approval board announcement (if any)				Aug. 31, 2018									
Risk analysis and control measures of derivatives positions during the reporting period (including but not limited to market risk, liquidity risk, credit risk, operational risk, legal risk, etc.)				<p>Risk analysis and control measures of derivatives positions during the reporting period (including but not limited to market risk, liquidity risk, credit risk, operational risk, legal risk, etc.)</p> <p>I. Risk analysis</p> <p>Commodity futures hedging operation can effectively manage the purchase price risk of raw materials, especially reduce the impact of falling price loss caused by high inventory on the company when raw materials fall sharply, but there will also be certain risks:</p> <p>1. Abnormal price fluctuation risk: In theory, the futures market prices and the spot</p>									

market price of all the trades will return to the same level in the delivery period. In the rare cases of irrational market, the futures prices and spot prices may still can't return in the delivery period, thus a systemic risk event occurs, affects hedging operation scheme of the company, and even causes losses.

2. Capital risk: If the amount of investment in futures trading is too large according to the operating instructions issued by the company, it may lead to capital liquidity risk, or even actual losses resulted by forced liquidation due to insufficient time to supplement the margin.

3. Technical risk: Technical risk may be caused by incomplete computer system. In order to prevent the adverse impact of exchange rate and interest rate fluctuations on the company's profits and shareholders' equity, the company needs to conduct capital transaction business of value-protected exchange rate and interest rate to reduce the risk exposure of foreign exchange and interest rate, but at the same time, there are certain risks:

1. Market risk. The difference between the contract exchange rate / interest rate and the actual exchange rate / interest rate at maturity date will generate investment gains and losses in the value-protected capital transaction business; During the duration of the value-protected capital transaction business, there will be revaluation gains and losses in each accounting period, and the cumulative value of the revaluation gains and losses is equal to the gains and losses on investment at maturity date.

2. Liquidity risk. The value-protected foreign exchange capital transaction business is based on the company's foreign exchange revenue and expenditure budget, matches with the actual foreign exchange revenue and expenditure to ensure that the company has sufficient capital for settlement at the time of delivery, or selects the derivatives for net delivery to reduce the cash flow demand at maturity date; The value-protected interest rate capital transaction business will be based on the net interest rate difference to deliver.

3. Performance risk. The counterparties of the company in value-protected capital transaction business are all Banks with good credit and establishing long-term business relations with the company, and there is basically no performance risk.

4. Other risks. When carrying out business, if the operators do not follow the prescribed procedures for the operation of value-protected capital transaction business or do not fully understand the derivatives information, the operational risks will be brought; If the terms of the transaction contract are not clear, the legal risks will be likely to occur.

II. Risk management strategy

Commodity futures hedging risk management strategies:

1. Match the hedging business with the company's production and operation, and strictly control the futures position.

2. Strictly control the capital scale of hedging, reasonably plan and use the margin, issue operational instructions in strict accordance with the provisions of the company's futures trading management system, and conduct operations only after approval according to the regulations.

3. The company has established the *Derivatives Investment Management System* and the *Futures Management System*, made clear provisions for hedging business, and set up special futures operation team, futures operation monitoring team and the corresponding

	<p>business processes, and will control it through the implementation of authorization and post requirements, internal audit and other measures.</p> <p>4. The early-warning mechanism for medium and long-term trend of major varieties has been established. According to the monitoring mechanism of market price trend, the futures operation and monitoring team of the company will regularly predict the future trend of major varieties in a certain period, so as to ensure the timely judgment and disposal for futures varieties in case of abnormal fluctuations.</p> <p>Risk management strategies for value-protected capital transaction business:</p> <p>1. The company conducts value-protected capital transaction business for the purpose of reducing the impact of exchange rate fluctuations on the company, and prohibits any risky speculation; The amount of the company's value-protected capital transaction business shall not exceed the upper limit of the authorized amount approved by the board of directors or the general meeting of shareholders; The company shall not engage in capital transactions with leverage.</p> <p>2. The business working group of the company shall conduct risk analysis on the transaction business before carrying out the capital transaction business, and formulate and submit the transaction plan (including capital transaction variety, term, amount, transaction bank, etc.) and the feasibility analysis report to the business leading group.</p> <p>3. The value-protected capital transaction business contract of the company shall be executed after the business working group submits it to the chief financial officer, president and chairman for approval.</p> <p>4. The company shall sign contracts with transaction banks with precise and clear terms, and strictly implement the risk management system to prevent legal risks.</p> <p>5. The financial department of the company shall timely track the changes in the open market price or fair value of the capital transaction contracts, timely evaluate the changes in the risk exposure of the traded contracts, and regularly report to the risk control committee of the board of directors; If any abnormal situation is found, the risk control committee of the board of directors shall be reported to prompt the business working group to implement emergency measures.</p> <p>6. The company's internal audit department shall conduct regularly compliance audit on capital transaction contracts.</p>
<p>If the market price of invested derivatives during the reporting period or the fair value of the product changes, the analysis of the fair value of the derivatives should disclose the specific methods used and the setting of relevant assumptions and parameters</p>	<p>The hedging transaction variety of the company is the value-protected capital transaction business of the main variety in the domestic futures market. The market transparency is large and the transaction volume is active. The transaction price and the settlement unit price on the day can fully reflect the fair value of derivatives.</p>
<p>An explanation of whether the accounting policies and accounting principles of the company's derivatives during the reporting period</p>	<p>The accounting policies and accounting principles related to the company's derivatives transactions shall be implemented in accordance with the relevant provisions of the <i>Accounting Standards for Business Enterprises -- Recognition and Measurement of Financial Instruments</i> and the <i>Accounting Standards for Business Enterprises -- Hedging</i></p>

have changed significantly compared with the previous reporting period.	issued by the Ministry of Finance of the People's Republic of China, without any changes.
Special opinions of independent directors on derivatives investment and risk control of the company	Company's derivatives investment for the purpose of hedging has been evaluated by appointed related department in the investment risk. To put an end to speculation in the process of investment, the company has established the <i>Derivatives Investment Management System</i> and the <i>Futures Management System</i> . In the process of conducting derivatives business, the company shall continue to enhance the professional level of operating personnel and strengthen supervision.

Description of the main shareholding companies

During the reporting period, the company's investment income from Minsheng Bank of 2,247,427,600 Yuan, accounting for 36.36% of the company's net profit, is the investment income accounted and recognized by the company's holding subsidiary, New Hope Investment Co., Ltd., which holds 1,828,327,362 shares of minsheng bank, with a shareholding ratio of 4.1759%, through the equity method.

VIII. The situation of the structured subject controlled by the company

Applicable Not Applicable

IX. The prospect of the future development of the company

(I) Industry structure and trend

1. Feed industry. In recent years, the domestic feed industry has entered a mature stage. From 2014 to 2019, the year-on-year growth rates of national feed production were 3.8%, 1.4%, 4.5%, 5.9%, 2.8% and -3.7%, respectively. Under steady growth of the total amount, different kinds of animal feed show different growth trends because of the different effects of long, medium and short industry cycle. Long cycle refers to the cycle of industrial upgrading and technological progress, such as poultry feed with a higher degree of downstream large-scale farming, higher mixture permeability and relatively more mature technology. The overall growth rate in recent years will be slower than that of pig feed and aquatic feed. The mid-cycle refers to the cycle of supply and demand and price changes of livestock and poultry products. The periodic increase or decrease of the breeding volume of certain types of animals downstream will affect the increase or decrease of feed sales of the corresponding types upstream. Short cycles refer to natural disasters and epidemic outbreaks that affect specific animals, such as H7N9 influenza, which affected poultry feed in the first half of 2017, torrential rains and floods in the south that affected aquatic feed in 2017, and African Swine Fever, which has had a significant impact on pig feed since mid-2018. According to the statistics of the China Feed Industry Association, the national pig feed production fell by 26.6% in 2019 compared with the same period last year, which superimposed the dual effects of the trough of the conventional pig cycle and African Swine Fever. Although the pork shortage caused by African Swine Fever has driven the alternative supply of poultry meat and eggs, which in turn led to an increase of 17.1% in poultry feed, the increase in poultry feed is not enough to make up for the decline in pig feed, so annual production will also decline year-on-year for the first time in nearly six years.

Whether it is the maturity of the industry, or the impact of long, medium and short cycles, the competition is becoming increasingly fierce. On the one hand, enterprises strive to enhance innovation of their existing business; on the other hand, they also extend in the upstream and downstream of the industrial chain to optimize their own strategic positioning. In the process of technological research and development, microbial fermentation technology has hastened the development of bio-environment-friendly feed, and there has been an upgrade from sinking pellet to floating expanded feed in aquatic products. In other categories, there are also more and more subdivided feeds according to the feeding stage. In the process of raw material procurement, enterprises continue to increase the exploration of more diverse raw materials, and for conventional bulk raw materials, they also lock in the important upstream raw material base through strategic cooperation agreements, equity participation or self-management, and improve the accuracy of bulk procurement with the help of big data and financial instruments such as futures. In the process of production and processing, more efficient and convenient logistics can support the transportation of a larger radius, hastened the birth of more feed factories with larger production capacity. Enterprises improve efficiency through more concentrated large-scale production and improves quality through specialized workshops or specialized production lines at the same time. In the sales and service link, in addition to selling feed products, enterprises also provide various forms of value-added services for farmers, such as technical guidance, animal healthcare protection veterinarians, financing support, information services, livestock and poultry sales support, etc., to enhance customer stickiness, eliminate retail links, increase the proportion of direct supply and help farmers improve breeding efficiency and increase income.

In the upstream and downstream extension of the industrial chain, companies extend not only to the upstream raw material planting and trade areas, but also to the downstream breeding, slaughtering and food processing links. Comparatively speaking, due to the differences between pigs and poultry (see the introduction in the white-feathered poultry business for details), poultry feed enterprises extend downstream to poultry raising and slaughtering links earlier and more often; while pig feed enterprises extend to pig raising and slaughtering links relatively late and rare in the early stage, but in the last two pig cycles, especially after the African Swine Fever, it has become more often. The extension to downstream link reflects the demand of feed enterprises to control the downstream breeding and consumer needs, to ensure that the upstream feed production capacity can be fully utilized and obtain the profits of the downstream links at the same time. The reason behind this lies in the change of the relationship between supply and demand in the whole industry. The downstream breeding link is gradually becoming large-scale, and the focus of industry value is gradually shifting

from the feed link in the past to the downstream breeding link and food link.

Whether it is the promotion and innovation of the existing business, or the extension to the upstream and the downstream of the industrial chain, the comprehensive strength of the enterprise itself is required. Due to their strong comprehensive strength, large enterprises have obvious advantages in the competition, and their market share is gradually increasing, which leads to the gradual increase of industry concentration. From 2013 to 2019, the number of feed enterprises in China has dropped from more than 10,000 to about 7,800, while the number of enterprises with an annual output of more than 100,000 tons has increased from 460 to 621. The African Swine Fever in 2019 accelerated the reshuffle and integration of the industry. Compared with large enterprises, small and medium-sized feed enterprises lack technology, biosafety and other aspects. Their sales are mainly depended on family farms and small-scale free-range households, the latter of which are relatively more affected by African Swine Fever. This makes small and medium-sized feed enterprises more affected than large-scale feed enterprises. After withstanding the influence of African Swine Fever, large enterprises will increase their market share.

In 2020, from the perspective of the external environment, a preliminary agreement on Sino-US trade can help improve the cost pressure on upstream raw material procurement to a certain extent. From the perspective of the internal environment, the African Swine Fever cannot be eradicated in a short time, and it will still be the biggest challenge for the entire industry, especially for the pig feed business, and the demand for pig feed can only recover slowly from the low level. Poultry feed can still enjoy the dividend under demand with substitution of poultry meat downstream, but the incremental space will be lower than that of the previous year. Although there is no obvious periodic change in aquatic feed, there are opportunities to upgrade consumption from ordinary aquatic products such as the four major Chinese carps to specialized aquatic products such as shrimps and crabs. The COVID-19 at the beginning of the year will also bring certain pressure to feed production and breeding production in the first quarter. Facing the unfavorable situation, the feed enterprises with standard, good hardware equipment and strong anti-risk ability are more able to deal with various complex situations and continue to increase their market share, and the company's feed business is expected to continue to grow against the trend.

2. White-feathered poultry. As the growth cycle of poultry is shorter than that of pigs, the technical difficulty of its breeding technology is also lower than that of pig farming, and the threshold for investment in a single farm is relatively low, so the development of domestic poultry farming starts earlier, matures earlier and has a higher degree of scale than pig farming. Therefore, unlike pig industry in which enterprises increase investment in recent years with a clear trend of replacing small farms, both enterprises and large-scale farmers in poultry industry have a small scale of production expansion and reduction with the industry cycle. The overall pattern of the industry and the market share of leading enterprises are also relatively stable compared with the pig industry.

In recent years, after many rounds of periodic growth, the domestic white-feathered poultry industry has entered a stage of rebalancing of breeding-slaughtering structure. The last cycle peak began in 2016, when there was a boom in the white-feathered poultry business, which spurred an increase in industry-wide production capacity. But since the beginning of 2017, this relative excess capacity, coupled with the impact of the H7N9 flu epidemic, quickly sent the market to a trough, which had not been seen in years. The strict regulation of environmental protection in the summer of 2017, through the delimitation of prohibited and restricted areas, demolished many environmentally substandard breeding sheds and further reduced the production capacity of poultry breeding. As a result, there has been a shortage of production capacity of poultry farming relative to poultry slaughtering since 2018, as well as a rise in prices and the recovery of profits in poultry farming. In 2019, after the long period of high level supply of both breeding poultry and commercial poultry there were two sharp declines in the middle of the year and the end of the year due to the recovery of supply, while the price of poultry remained high under demand of substitution because of the rising pork prices. It decreased in the middle and end of the year, but the range was relatively small.

In the short term, it is important for the white-feathered poultry industry to seize the opportunity of environmental protection upgrading, taking environmental protection transformation and shed upgrading as the starting point, and actively gaining control of qualified commercial generation poultry breeding bases. The fundamental purpose for enterprises to control commercial generation breeding bases is to gain control over supply quantity, cost, food safety, and production rhythm, so that the company will not bear excessive cost pressure during the upward period of the market and get food safety guaranteed by the whole industry chain, and the

production cycle can be coordinated with downstream meat price fluctuations. The ways of realization can be diversified: the enterprise can independently invest in the new commercial generation breeding farms, or promote the transformation from the traditional contract mode to the entrusted contract mode with long-term cooperation and stable cost.

In the long run, the development and progress of the white-feathered poultry industry also requires the coordination of breeding and slaughtering, sales channels upgrading, high standard investment related to environmental protection and safety in the breeding link to get a higher premium return in the downstream poultry meat sales. This requires the white-feathered poultry enterprises not only to persistently input and stay true to their original aspirations, but also the actions to make positive choices of the downstream supermarkets, catering customers, and end consumers, so that the situation of bad money drives out good can be avoided and enterprises and brands that are truly committed can be well recognized, finally promoting the supply-side structural reform of the white-feathered poultry industry jointly.

Specifically, in 2020, as the current domestic inventory and supply of poultry have been at historical highs since the removal of production capacity by avian influenza and environmental protection policies in 2017, the risk of surplus has gradually increased. Although COVID-19 has had an impact on production in the short term, but it is expected that the number of poultry and poultry meat production will continue to grow throughout the year. The poultry slaughtering sector, which is relatively downstream, will continue to enjoy the dividend under demand with substitution, but the poultry breeding sector, which is relatively on the upstream, will face greater pressure on its profit level compared with 2019 due to the change in the relationship between supply and demand.

3. Pig breeding. As the growth cycle of pigs is longer than that of poultry, the technical difficulty of pig breeding is higher, and the threshold of investment in a single farm is relatively high, the development of domestic pig farming starts later and matures later, and the degree of scale is lower. Therefore, the pig breeding industry still has room for improvement in technical efficiency. Especially with the development of breeding technology, there is an obvious efficiency difference in piglet production between the large-scale and intensive piglet production carried out by large enterprises and farmers' self-breeding mode. This is reflected in the most used indicator in the industry, PSY. In 2017, the average PSY of the whole industry is about 17, the PSY of large enterprises is usually above 20, and the average PSY of farmers who are self-propagating and self-supporting is about 15. Although there are some technical and efficiency differences between enterprises and farmers in the fattening process of commercial pigs, this efficiency difference is not as big as that of piglet production. As a result, the trend of large enterprises engaging in breeding and piglet production and farmers focusing on fattening is gradually becoming an efficient allocation formed spontaneously by the development of the industry. Because of such obvious efficiency differences and mature business model, the new investment was mostly dominated by large enterprises in the new round of pig investment development triggered by the high pig price from 2015 to 2016, and many feed enterprises entered the field of pig farming.

However, since 2018, the pig industry has again undergone great changes. First, in the first half of the year, the industry experienced the lowest pig price since 2011. In the second half of 2018, there was another serious outbreak of African Swine Fever in China, and both pig enterprises and farmers suffered varying degrees of losses. In 2019, African Swine Fever continued to spread in more provinces across the country from north to south. Although pig prices have gone out of the bottom area and rose sharply in the second half of the year, attracting enterprises and farmers to start restocking, the situation of prevention and control of African Swine Fever is still grim. It is difficult for the industry to increase production, with pig stocks falling by 27.5% at the end of the year and the live pigs sell falling 21.6% for the whole year.

After the outbreak of African Swine Fever, enterprises continue to explore and optimize prevention and control measures and the government is also gradually adjusting the upstream and downstream related industrial policies, all of which began to have a huge and far-reaching impact on the whole industry. First, the extensive and unhygienic ways of raising pigs in backyard and swill, which were more common in rural households in the past, have obviously withdrawn because they are considered to be the main cause of African Swine Fever. This means that the proportion of small-scale pig breeding farmers will become less and less in the whole industry.

Secondly, as there is still no effective vaccine against African Swine Fever, and the infection cannot be cured, enterprises and farmers have increased investment in shed facilities, animal nutrition, animal healthcare protection drugs, management and other aspects in order to reduce the risk of the disease. These inputs will inevitably drive up the production costs of the whole industry before

effective vaccine comes out. In 2019, the African Swine Fever vaccine has been in the process of research and development, and different enterprises in the industry have chosen different epidemic prevention technology routes according to their own conditions. After practical exploration, including losses and lessons, it has gradually become clear that under the current situation, the comprehensive prevention and control methods based on biosafety are more effective and practical, and all major enterprises have begun to attach importance to upgrading the internal prevention and control system. The prevention and control capability of the whole industry began to improve gradually.

Third, in the past, large-scale and wide-area remote transportation of live pigs was thought to increase the probability of spread during the outbreak of the epidemic, coupled with the fact that, a few years ago, the policy guided the transfer of a large amount of pig production capacity from the south to the north for the sake of environmental protection, and the excessive accumulation of pig production capacity in individual provinces also increased the risk of the epidemic, so the relevant policies are gradually guiding the national pig raising industry to form a new regional layout, reduce cross-regional live pig transportation and form the internal balance of pig supply and demand in a certain large area, and at the same time encouraging large pig raising enterprises to extend downstream, form a one-stop layout of pig raising and slaughtering and promote the transformation of the whole industry from "pig transport" to "meat transport".

In short, African Swine Fever has a tremendous impact on the whole industry in the past two years, but it has also objectively contributed to the withdrawal of backward production capacity that is not environmentally friendly and unsanitary, which is beneficial to large enterprises that can fully invest in various prevention and control measures as a whole. The sharp decline in industry-wide production capacity has also triggered a new round of pig cycle upward, with national pig prices rebounding significantly from the second half of 2019 and hitting record highs one after another since August. Stimulated by the sharp rise in pig prices, the industry began to use a large number of commercial generation sows as parent sows for reproduction, but due to the limitations of the production performance and decline rate of commercial generation sows, as well as the grim external situation of African Swine Fever, coupled with the phased impact of COVID-19 in early 2020 on the resumption of fencing and the start of pig farms in the industry, pig cycle will be further prolonged. It is expected that pig prices will remain high in 2020. As the company has invested in new construction for most of the breeding capacity since 2016, adhered to high standards of construction from the very beginning, had a relatively balanced distribution of production capacity in all major regions of the country and rich experience in developing pig slaughtering downstream, and also achieved the industry-recognized level of prevention and control of African Swine Fever in 2019, it will certainly get more opportunities in the great changes in the industry caused by African Swine Fever, achieving great-leap-forward development and surpassing the formers from behind.

4. Food. Compared with the unprecedented changes faced by the pig industry from 2018 to 2019, the food industry is in a state of quiet change and gradual upgrading in recent years. The main opportunity for the food industry lies in the transfer of the value of the industrial chain to the consumer side. Consumers pay more and more attention to the whole process of food safety, and demand for more convenient, fast and nutritious food at the same time. First, the main added value of agricultural and animal husbandry products is produced in the food processing link; second, the deeply processed food has a more stable price, which can also resist the periodic fluctuation of the agricultural and animal husbandry industry; third, when the industry has changed from "insufficient supply" to "oversupply" in recent years, the upstream agriculture and animal husbandry production can only be correctly guided by grasping the need of end consumers; fourth, the most important safety issue of the food link needs the common safeguard of the whole industry chain. At the end of 2016, the Ministry of Agriculture issued the National Development Plan for the Integration of Agricultural Products Processing Industry and Primary, Secondary and Tertiary Industries in Rural Areas (2016-2020), proposing to "focus on promoting the construction of the whole industry chain and the whole value chain". For enterprises covering the whole industrial chain, it is easier to achieve full-process supervision and traceability, ensure food safety and higher premium for products. The 2017 Central Committee Document No. 1 emphasizes "comprehensively improving the quality and food safety of agricultural products: establishing a traceable, interconnected and shared integrated service platform for traceability and supervision", and "speeding up the development of modern food industry: building food processing industry clusters in the producing areas of advantageous agricultural products." The government vigorously promotes production and marketing models such as 'production

base + central kitchen + catering stores' and 'production base + processing enterprises + merchant super-sales'. The 2018 Central Committee Document No. 1 emphasizes "implementing the strategy of invigorating agriculture by quality: implementing the strategy of promoting agriculture by quality, improving the quality and food safety standard system of agricultural products, strengthening the construction of the traceability system of agricultural inputs and the quality and safety of agricultural products", and "constructing the integrated development system of the primary, secondary and tertiary industries in rural areas: vigorously developing multiple functions of agriculture, extending the industrial chain, upgrading the value chain, and perfecting the chain of interests." The government will implement actions to upgrade the agricultural products processing industry, encourage mergers and restructuring of enterprises, and eliminate backward production capacity. " In 2019, the No. 1 Document of the Central Committee proposed to "optimize the distribution of pig industry and slaughtering capacity, and form a slaughtering capacity matched with the production capacity in the main producing areas", while emphasizing "promoting the standardization of pig slaughtering, strengthening the docking of production and marketing, and ensuring the supply of meat market". Enterprises that cover the whole industry chain are also easier to realize the supervision and traceability of the whole process from feed, breeding to food processing, and it is easier for those enterprises to give full play to the advantages of food safety and help products to get a higher premium.

For the pig slaughtering business in the company's food business, the outbreak of African Swine Fever in 2018 has also brought some impact that will affect the future direction of development. As large-scale and wide-area remote transportation of live pigs in the past was thought to increase the probability of spread in the event of an epidemic outbreak, relevant policies are gradually guiding the reduction of cross-regional pig movement, forming an internal balance between supply and demand of live pigs in a certain large area. At the same time, large pig raising enterprises are encouraged to extend downstream to form a one-stop layout of raising pigs and slaughtering, so as to promote the transformation of the whole industry from "pig transport" to "meat transport". Although the national pig slaughtering industry has been in a state of overcapacity in recent years, with the national average capacity utilization rate of about 30%, different enterprises have different capacity in different regions and will face different pig prices. Due to the larger overall production capacity of large enterprises, the proportion of investment layout in large pig-raising provinces will also be higher, but under the background of regional differentiation of pig prices caused by African Swine Fever, large pig-raising provinces will also face the risk of lower pig prices because of the corresponding concentration of production capacity. In order to prevent pig profits from being eroded by lower regional pig prices, large pig breeding enterprises will also speed up the integration of pig slaughtering capacity in areas with more pig distribution. Compared with many other pig breeding enterprises, the company has a wealth of experience in the downstream slaughtering business. Whether they are self-building new projects, or in the form of strategic cooperation, leasing, joint ventures and other forms of integration of existing capacity, these experiences will bring great help to the company's pig business and slaughtering business to achieve better development.

In 2020, the COVID-19 at the beginning of the year had a great impact on the regular production and life of the people all over the country, especially the operation and development of catering and group meals, and also greatly influenced the upstream. But on the other hand, in modern supermarkets, e-commerce and other channels, convenient semi-finished products or pre-cooked food and other products can get new opportunities during the epidemic as they rely on relatively safer consumption options. At the same time, COVID-19 has also aroused social concern about safety and health issues in traditional farmers' markets. As the epidemic situation throughout the country gradually stabilizes, people's production and life return to the right track, and meat purchase and consumption return to normal. This may usher in a comprehensive upgrade of food wholesale and retail in terms of safety and hygiene, and objectively brings new growth space for large enterprises that have been strict with their own high standards / attach importance to food safety.

(II) Company development strategy

In mid-2017, the company launched the 2017-2021 five-year strategic plan, with the long-term vision of becoming a leader in the animal husbandry and food industry, and clearly put forward the strategic goal of "strengthening the feed business, expanding pig business, refining meat and poultry business, providing excellent food, and deepening overseas markets". Over the past three years, based on keeping the general direction of the "five-do" strategy unchanged, and in the light of changes in the internal and external environment, rolling updates have been made to some specific objectives and measures.

1. In feed business, guided by the needs of family farms and scale users, the company increases scale, fine products, excellent structure, increases profits, consolidates the absolute domestic leader and global competition position, and strives to be a world-class feed supply chain leader and animal nutrition integrated service provider through the upgrading of the operation mode of professional large factory building, layout optimization and adjustment, and the efficient operation of technique, procurement, production and marketing. The sales will exceed 28 million tons in 2022;

2. In the white-feathered poultry business, the company has reshaped the integration model by upgrading the breeding base, improving production efficiency, innovating the marketing model and paying strict attention to food safety. It has become the first supplier of middle and high-end poultry with a leading scale and sound profits in the Chinese market, hitting the slaughtering capacity of 1 billion birds in 2022, and greatly improving the scale matching degree between self-owned commercial generation breeding and poultry slaughtering;

3. In the pig breeding business, through the layout of settlement pig raising in advantageous areas, the company takes the reasonable matching of feed, breeding and slaughtering internally, making itself the modern pig industry company with integrated planting and breeding. It adopts the breeding mode of cooperative fattening and self-fattening. Under the guidance of safety production and cost optimization, the company will strive to be the top three pig breeding enterprise in China and hit 15 million live pigs in 2021 and 25 million live pigs in 2022 on marketing.

4. In the food business, the company gives full play to the advantages of the whole industry chain and provides safe, high-quality and standardized livestock and poultry protein materials for middle and high-end chain catering enterprises by means of research and development of faddish products, channel optimization, production efficiency, M & A and expansion, etc. It provides upgraded consumers with multi-brand leisure meat products, healthy meat protein food and high-end meat products, becoming China's leading service provider in standardized food materials of, livestock, poultry and protein and the top preferred food enterprise in meat and protein for consumption upgrading.

5. In overseas business, the company focuses on in-dept and thorough development in the core areas. Relying on the main feed industry and integrating the upstream and downstream links, the company extends the industrial chain to breeding and food. It strives to be the benchmark and vanguard of the internationalization of Chinese animal husbandry and food enterprises and develop overseas business into the second pole of the company's long-term growth.

(III) Progress of the prior business plan during the reporting period

1. Feed business. In terms of scale growth, feed sales increased by 9.9% year-on-year and reached 18.72 million tons, basically reached the target of more than 10% sales growth set last year, which is one step closer to the milestone of 20 million tons. The year-on-year increase in gross profit also exceeded 12%. In terms of structural adjustment, although the set goal of "strong pig feed" has not been fully achieved due to the influence of African Swine Fever, the changes of each feed species are better than the industry average: pig feed decreased by 9.0% (the national pig feed dropped by 26.6% compared with the same period last year); poultry feed increased by 19.9%, of which external poultry feed sales increased by 25.1% (the national poultry feed increased by about 17.1% over the same period last year), and the aquatic feed increased by 11.3% (the national aquatic feed increased by about 0.3% over the same period last year). In terms of lean operation, the number of factories with annual sales of more than 120,000 tons increased by 15 to 54, and the number of factories with annual sales of more than 200,000 tons increased by 4 to 8; the rate of per-ton feed production cost has also remained basically stable in the context of a sharp increase in prevention of African Swine Fever throughout the year.

2. White-feathered poultry business. In terms of base control, the construction of 17 new commercial generation self-feeding farms was completed in the whole year, bringing the number of commercial generation self-raising farms to 57, and the annual production scale of commercial generation chickens and ducks exceeded 74 million. At the same time, 9 commercial generation farms have started breeding, and 13 commercial generation farms are under construction, with an additional annual production capacity of nearly 75 million. Through other comprehensive services (including self-support, entrusted breeding, and continuous breeding contracts for more than two years), the company made every effort to increase the proportion of direct supply, which reached 71% in the chicken industry and 41% in the duck industry for the whole year. In terms of marketing upgrading, for superior

sales channels such as food processing raw materials channels, catering channels, and supermarket stores channels other than the traditional wholesale channels, sales in these three categories of superior channels increased by 10.6% compared with the same period last year.

3. Pig farming business. In the aspect of prevention and control of African Swine Fever, the company has set up nearly 20 testing laboratories across the country, comprehensively using fluorescent quantitative PCR, to form a three-level detection system, and the company's pig industry researchers participated in writing "Nine Key Technologies for the Prevention and Control of African Swine Fever to Resume Pig production" published in the Farmers' Daily. The rapid sampling equipment developed by the company, such as living inguinal lymph node sampler and cotton rope oral fluid collector, has also been widely used in the industry; the company's annual live pig listing rate has reached 90%. In terms of rapid development, aiming at the challenging goal of "two 180 days" of pig raising investment project, the company has 18 projects to complete the formalities within 180 days, and 8 projects to complete the construction within 180 days. By the end of 2019, the company has projects in operation with production capacity of 10 million and construction with production capacity of 6.5 million, and the company's fixed assets and the balance of construction in progress increased more than 200% from the end of last year. Other projects that have completed land contracts or reserves have a production capacity of more than 43.5 million, with a theoretical maximum production capacity of more than 60 million. In terms of strict cost control, through effective prevention and control of African Swine Fever combined with high-efficiency and low-cost farming methods that have always been advantageous in the past, the complete cost of fattening piglets can still be maintained at 13.0 Yuan / kg, under the background that 90% of fattening pigs are completed by cooperative farmers, an increase of less than 1 Yuan compared with 2018, continuing to maintain a leading level in the industry.

4. Food business. In terms of innovative business, it launched a series of "Zhi Chu" series of traceable pork products and other new products, and the share of high premium categories increased to 38%. In terms of industrial business, sales of pork products in the secondary market in Sichuan increased by 23% and 47% in markets outside Sichuan. In terms of creating a single product of 100 million Yuan, the Small Crispy Meat launched by the company in 2019 began to make efforts in the middle of the year, mainly relying on sales in the second half of the year, whose sales exceeded 140 million Yuan. The product stationed in Haidilao, Freshhema and other well-known catering terminals, becoming the company's star products. In terms of high-end cooperation, the company continues to strengthen the cooperation of representative customers in emerging channels such as Wanchai Ferry Terminal, Haidilao, Yonghui supermarket, and Freshhema, and increase the proportion of sales of products with high gross profit to 15% for emerging channels such as Shang Chai, e-commerce, and new retail.

5. Overseas business. In terms of regional focus, among the five key markets identified last year, namely, Vietnam, the Philippines, Indonesia, Bangladesh and Egypt, northern Vietnam and Indonesia took the lead to stand out as two areas with assessed profits of more than 100 million Yuan. In terms of industrial depth, the company's first overseas pig farm has also been completed and put into production in Vietnam, marking a new step in the extension of the overseas industrial chain of New Hope.

(IV) Business plan for next year

1. Feed business, focusing on structural adjustment, layout optimization, and mechanism innovation. In terms of structural adjustment, the company is expected to double the growth of specialized aquatic feed, continue to consolidate the advantages of poultry feed and enhance profitability, and strive to maintain the growth of external sales of pig feed and bio-environmentally friendly feed; in terms of optimizing the layout, the company will further increase the number of large-scale feed factories with annual sales of more than 200,000 tons, and promote the overall corporate operation of feed areas with close geographical distribution. In terms of mechanism innovation, the company will explore the product project system, set up a special department especially for specialized aquatic feed, and promote the regional partnership mechanism in key regional markets; the company is expected to achieve an annual feed sales increase of 10% compared with the same period last year and take the lead in becoming the first enterprise in China to sell more than 20 million tons of feed.

2. White-feathered poultry business will focus on direct control base, access to head customers, promotion of Zhongxin duck. In terms of the direct control base, the company will set up a special Breeding Base Promotion Committee and promote the self-raising and entrusted raising of chickens and ducks, the sales of which is aimed to reach more than 50% of the company's slaughtering

capacity, through means of self-construction, acquisition, leasing, joint construction and leasing, etc. Plus the form of long-term breeding contracts with more than two years' commitment, the direct control base of the company can reach more than 80% of its slaughtering capacity. In terms of obtaining head customers, the company will set up a special development project team to increase the proportion of head customers in the company's total poultry sales. In the promotion of Zhongxin ducks, the company adheres to the idea of taking terminal food as the traction. Through the linkage of the poultry industry management unit, brand promotion department and food research institute, the company can obtain favorable reputation of the consumer-end duck products and willingness to raise ducks at the production-end farmers. In the whole year, Zhongxin duck is aimed to account for more than 10% of the total deposit column in the industry.

3. Pig farming business, focusing on scaling up, seizing talents and ensuring safety. In terms of scaling up, by continuously optimizing the construction process and innovating construction methods, the company will improve the construction speed of the project, ensuring that more than 8 million live pigs are produced in the whole year, of which more than 5 million piglets are self-produced, and the proportion of self-fattening pigs reaches 50%. At the same time, the business is further transferred to the profit advantage area and the major pork consumption areas in the regional layout. In terms of seizing talents, through extensive campus recruitment and in-depth school-enterprise cooperation, social recruitment and demobilized military recruitment, the company can obtain a talent team in the pig industry of more than 20,000, and at the same time, through internal leading talent drive and team fission plan, strengthen the training, promotion and output of newly recruited talents. In terms of safety, the company should further optimize the process of prevention and control of African Swine Fever, improve the listing rate and the rate of top quality products, and pilot intelligent pig farms to improve breeding efficiency and reduce the complete cost of breeding.

4. Food business, focusing on strengthening brand matrix, creating extreme faddish products, centering on head customers, and breaking through key areas. In terms of branding, the company will improve brand positioning to form a mother-child brand matrix; in terms of products, applying hot-sales item oriented thinking, the company will push Small Crispy Meat to challenge 300 million Yuan, break through 2-4 new billion Yuan products, and make a big breakthrough in branded fresh chilled pork; in terms of sales channels and customers, the company will focus on KA and head catering customers and build customers with a purchase amount of more than 1 billion Yuan. In terms of marketing regions, the market share is expected to have significant increase in the provinces with fresh chilled pork consumption market of more than 100 billion Yuan.

5. Overseas business, focusing on core areas, overseas digitization, talent localization, global finance and trade. In terms of regional markets, the company will further increase the contribution of feed sales and profits to the whole overseas business in core development areas such as Vietnam, Indonesia and the Philippines; in terms of overseas digitization, the company will first promote standardization of overseas production and operation lines, and on this basis, promote lean operation, and select a company with a better lean level to pilot digitization; in terms of talent localization, the company will further increase the proportion of local middle-level cadres in the host country; in terms of global finance and trade, the company will gradually strengthen the function of overseas BU trade platform, and expand trade in bulk raw materials, feed additives, food, agricultural and animal husbandry equipment, animal healthcare protection products and other fields.

In 2020, the company's estimated capital demand for investment, development and other business activities at home and abroad is about 20 billion Yuan. The main sources of funds are:

- (1) The company's own funds (including the company's existing currency funds and the net inflow of operating cash in 2020);
- (2) Financing from domestic and foreign financial institutions;
- (3) Four billion Yuan of convertible bonds successfully issued at the beginning of 2020;
- (4) Issuing short-term financing bills, corporate bonds, private issuance and other financing;
- (5) Expand supply chain financing.

X. Reception of research, communication, interviews and other activities**1. Registration form for reception, research, communication, interview and other activities during the reporting period**

√ Applicable □ Not Applicable

Reception time	Reception mode	Object type in reception	Index of the basic situation of the survey
January 4, 2019	Telephone communication	Individual	Inquire about the progress of the company's share repurchase
January 7, 2019	Telephone communication	Individual	Inquire about the company's management and strategic planning
January 9, 2019	Telephone communication	Individual	Inquire about the company's operation in the first quarter of 2019
January 11, 2019	Telephone communication	Individual	Inquire about the progress of the company's share repurchase
January 16, 2019	Telephone communication	Individual	Ask about the company's transfer of Blue Star shares in the United States
January 17, 2019	Telephone communication	Individual	Ask the major shareholders of the company to increase their holdings of the company's shares
January 21, 2019	Telephone communication	Individual	Ask about the company's pig breeding planning
January 24, 2019	Telephone communication	Individual	Inquire about the progress of the company's share repurchase
January 28, 2019	Telephone communication	Individual	Inquire about the impact of the listing of the New Dairy on the company
January 29, 2019	Telephone communication	Individual	Ask about the equity investment relationship between New Hope Dairy and the company
February 11, 2019	Telephone communication	Individual	Inquire about the relationship between New Hope Dairy and the company's equity
February 12, 2019	Telephone communication	Individual	Inquire about the pig breeding plan

Section 5 Significant Events

I. The profit distribution of the company's common stock and the conversion of the capital reserve fund to increase the share capital

The common stock profit distribution policy, especially the formulation, implementation or adjustment of the cash dividend policy during the reporting period

Applicable Not Applicable

The dividend distribution plan of the company's common shares in the past 3 years (including the reporting period) and the capital accumulation fund to increase the share capital plan (the plan).

The company's annual profit distribution plan for 2017 as follows: Based on the company's total share capital of 4,216,015,009 shares, the company paid 1.50 Yuan (including tax) for every 10 shares in cash to all shareholders, and no capital reserve fund was converted to increase the share capital.

The company's annual profit distribution plan for 2018 as follows: The repurchased shares of 73,167,190 shares, which did not participate in the profit distribution, was deducted from the company's total share capital of 4,216,015,009 shares, so, based on 4,142,847,819 shares, the company paid 0.3 Yuan (including tax) for every 10 shares in cash to all shareholders, and no capital reserve fund was converted to increase the share capital.

The company's pre-arranged annual profit distribution plan for 2019 as follows: The repurchased shares of 72,258,790 shares, which will not participate in the profit distribution, shall be deducted from the company's total share capital of 4,216,015,009 shares, so, based on 4,143,756,219 shares, the company shall pay 1.5 Yuan (including tax) for every 10 shares in cash to all shareholders, and no capital reserve fund shall be converted to increase the share capital.

Statement of cash dividends on common shares of the company in the past three years (including the reporting period)

Unit: Yuan

Dividend year	Cash dividend amount (including tax)	Net profit attributable to common shareholders of a listed company in the annual consolidated statement of dividends	The ratio of cash dividends to the net profits attributable to the common shareholders of a listed company in the consolidated statement	The amount of cash dividends paid by other means (such as share repurchases)	The proportion of the amount of cash dividends in other ways to the net profits attributable to the common shareholders of a listed company in the consolidated statement	Total cash dividends (including other means)	The ratio of the total cash dividend (including other means) to the net profit attributable to the common shareholders of the listed company in the consolidated statement
2019	621,563,432.85	5,041,999,768.06	12.33%	472,968,246.41	9.38%	1,094,531,679.26	21.71%
2018	124,285,434.57	1,704,646,781.14	7.29%	135,933,209.85	7.98%	260,218,644.42	15.27%

Latest cash dividend

The company is in a mature period, and there is a major capital expenditure arrangement. When the profit distribution is carried out, the minimum proportion of the cash dividend in the profit distribution should reach 40%.

Details of the preplans on profit distribution or increment of capital reserves

The 2019 annual financial report of New Hope Liuhe Co., Ltd. was audited by certified public accountants of Sichuan Huaxin (Group) Accounting firm (Special General Partnership), who issued the audit report of Sichuan Huaxin Audit (2020) No. 034:

According to the audit report, in 2019, the company achieved annual net profit of 5,041,999,768.06 Yuan attributable to the parent company owner, extracted the statutory surplus reserve fund of 198,864,436.40 Yuan according to the provisions, reduced 94,838,132.73 Yuan for the disposal of other equity instrument investments, and paid 124,285,434.57 Yuan for dividends on common stock to implement 2018 annual profit distribution plan distributing cash dividend of 0.30 Yuan for every 10 shares, the undistributed profit at the beginning of the year was 12,997,313,375.41 Yuan, but the company's undistributed profit at the beginning of the year was affected by the change in accounting policy and reduced by 31,138,927.47 Yuan, so the annual distributable profit is 17,590,186,212.30 Yuan.

In 2019, the parent company achieved annual net profit of 205,697,199.41 Yuan, extracted the statutory surplus reserve fund of 20,629,553.84 Yuan according to the provisions, increased 69,837.75 Yuan for the disposal of other equity instrument investments, and paid 124,285,434.57 Yuan for dividends on common stock to implement 2018 annual profit distribution plan distributing cash dividend of 0.30 Yuan for every 10 shares, the undistributed profit at the beginning of the year was 2,453,249,584.40 Yuan, but the company's undistributed profit at the beginning of the year was affected by the change in accounting policy and reduced by 538,505.08 Yuan, so the annual distributable profit is 2,513,563,128.07 Yuan.

In conclusion, the company's pre-arranged annual profit distribution plan for 2019 as follows: The repurchased shares of 72,258,790 shares, which will not participate in the profit distribution, shall be deducted from the company's total share capital of 4,216,015,009 shares, so, based on 4,143,756,219 shares, the company shall pay a cash dividend of RMB 1.5 Yuan (including tax) for every 10 shares to all shareholders, and a total cash dividend of 621,563,432.85 Yuan shall be paid..

According to the regulations of *Detailed Implementing Rules for Share repurchase of Listed Company in Shenzhen Stock Exchange*, in 2019, the company implemented the share repurchase of 472,968,246.41 Yuan as cash dividend. The company's pre-arranged cash dividend for distribution is a total of 1,094,531,679.26 Yuan (including the amount of share repurchase implemented in 2019), accounting for 21.71% of the company's annual net profit of 5,041,999,768.06 Yuan attributable to the shareholders of listed companies in 2019. In the recent three years, the company's cumulative distributed profit in cash accounts for 66.04% of the average annual distributable profit achieved in the last three years.

III. Performance of commitments

1. The commitments of the company's controlling shareholders, shareholders, related parties, purchasers and purchasing companies have been fulfilled during the reporting period and those that have not been fulfilled by the end of the reporting period.

√ Applicable □ Not Applicable

commitment	Committing party	Commitment type	Commitment content	Commitment time	Commitment period	Performance
Commitment to equity reform	New Hope Group Co., Ltd.	Share reduction commitment	New Hope Group Co., Ltd. shall not be listed for trading or transfer of shares within 36 months from the date of obtaining the right of circulation. After the above-mentioned lock-up period expires, only when the closing price of the company's shares reaches more than 6.8 Yuan on any five consecutive trading days, the original non-tradable shares may be listed for sale of not less than 6.8 Yuan. When the company implements the distribution of profits, the conversion of the capital reserve fund, the issuance of new shares, the rights issue, the conversion of convertible bonds into shares or the reduction of shares by all shareholders in the same proportion, the prices of the above-mentioned sold shares will be adjusted accordingly. (2) Violation of external guarantee

Applicable Not Applicable

There is no violation of external guarantee in the reporting period of the company.

3. Entrust others to manage cash assets

(1) The situation of entrusted financial management

Applicable Not Applicable

There is no entrusted financial management in the reporting period of the company.

(2) Entrusted loan situation

Applicable Not Applicable

There is no entrusted loan during the reporting period of the company.

4. Other major contracts

Applicable Not Applicable

There are no other major contracts in the company's reporting period.

XVIII. Social responsibility situation

1. Fulfillment of social responsibility

For details, please refer to the "2019 Corporate Social Responsibility Report of New Hope Liuhe Co., Ltd." published on Cninfo.com on April 1, 2020.

2. Fulfillment of the social responsibility of targeted poverty alleviation

(1) Targeted poverty alleviation planning

Through industrial poverty alleviation, it will take three years (2018-2020) to help 5000 poor households get rid of poverty and increase their income and help at least 2000 poor people with filing cards to increase their income and get rid of poverty throughout 2019.

Basic principle: Focus on the principle of "industry-based, all-win" and go toward the goal of helping poor households increase their income.

Main measures:

1) Due to the needs of strategic development, the company adjusted the organizational structure, redistributed the poverty alleviation tasks in time according to the organizational structure adjustment, and revised the assessment methods. The amount of reward will be divided into three levels according to the number of people out of poverty, and the units with heavy poverty alleviation tasks, a large number of poverty alleviation and great contribution to poverty alleviation will receive great prizes; detailed punishment measures have been formulated for units and individuals who have not carried out poverty alleviation work and lagged behind in their work.

2) Strengthen supervision: Hold 2019 Targeted Poverty Alleviation Promotion Conference, and each unit will decompose the task in detail. Carry out on-site supervision work to more than three units every month; timely follow up major poverty alleviation projects under construction and urge them to speed up progress and assist in solving various problems encountered in the promotion.

(2) Annual outline of targeted poverty alleviation

Great achievements were made in the precise poverty alleviation work in 2019 and 3300 registered poor people were helped to increase income and lift themselves out of poverty. Since the company carried out accurate poverty alleviation work in 2016, it has helped more than 5667 people to increase their income and get rid of poverty. The company has increased investment in targeted poverty alleviation projects, spending more than 2.6 billion Yuan on industrial precision poverty alleviation projects in 2019 alone. The company's poverty alleviation models such as "3+ N" and "4+ N" have been recognized and affirmed by all sectors of the society, and have won honors such as Poverty Alleviation Innovation Case Award of Listed Company, Sichuan Province Advanced Enterprise for Poverty Alleviation, China Feed Industry Poverty Alleviation, Advanced Poverty Alleviation Units of Sichuan Listed Companies, 2019 Sichuan Excellent Enterprises in Poverty Alleviation of Sichuan Animal Husbandry Industry, 2019 Good Companies of China and other honors.

1) Rely on industry and stabilize poverty alleviation

Relying on the company's breeding industry, actively docking with the local government, and with the help of various national and local support policies for the poor households, the company will try every means to form a community of interests between registered households and the company's breeding industry will bring stable income to poor households and realize income increase and poverty alleviation. The win-win situation of the state, enterprises, large households and poor households can be achieved mainly through the models of "3+ N" and "4+ N" industrial poverty alleviation.

In addition, local companies of Changsha, Huaihua and other constituent companies in Hunan Province adopt employment poverty alleviation, and food industry companies help poor people by purchasing agricultural and sideline products online and offline.

2) Complementary advantages and cooperation in poverty alleviation

In order to make more poor households increase their income and get rid of poverty, we work with third-party enterprises, financial institutions and other social forces to give full play to their respective advantages to help the poor: The pig-breeding base in Zhaojue, Liangshan, Sichuan Province, which cooperates with the People's Bank of China, has listed the second batch of pigs, and the

base is now in normal operation. Projects in cooperation with China Construction Bank will also start construction; projects in Jingyuan of Gansu Province, Taiqian of Henan Province, Hezhang of Guizhou Province, Nayong, Xiajin of Shandong Province, Yanggu of Liaocheng Province, and Nangong of Hebei Province are under construction; a number of projects have been signed in Sichuan, Chongqing, Yunnan and other places.

Through poverty alleviation models such as "3+N" and "4+N", industries will be located in poverty-stricken areas and poor people will obtain sustainable benefits, steadily increase their income and lift themselves out of poverty.

3) Adjust measures to local conditions and one policy for each district

All subordinate units are encouraged to do their best according to their respective industrial characteristics and local actual conditions. They adopt ways in line with the local actual conditions, promote accurate poverty alleviation, and truly implement accurate policies and "one district, one policy". Such as meat duck breeding poverty alleviation: Shan County in Shandong Province, Taiqian in Henan Province and other places adopted joint construction bases and guarantee companies took support cooperatives to jointly increase the income of poor households, and so on. Another example is pig farming poverty alleviation: Zhaojue and Meigu of Liangshan, Sichuan Province took multi-party co-construction bases, and let the large households play a leading role in Yilong; collective investment in government villages was taken in Yijun, Shaanxi Province and Jingyuan, Gansu Province to build demonstration farms, and cooperative management drove poor households to increase their income, and so on. All the methods are most suitable for local conditions and have achieved good results.

(3) Precision poverty alleviation effect

Indicators	Unit of measurement	Quantity / development
I. Overall situation	—	—
Of which: 1. Fund	Ten thousand Yuan	260,000
3. Number of registered poor people who have been lifted out of poverty	People	3,300
II. Investment breakdown	—	—
1. Industrial development and poverty alleviation	—	—
Of which: 1.1 Types of poverty alleviation projects for industrial development	—	Agriculture and forestry industry poverty alleviation
1.2 Number of poverty alleviation projects for industrial development	A	44
1.3 The amount of investment in the poverty alleviation project of industrial development	Ten thousand Yuan	260,000
1.4 Number of poverty-stricken people who help set up archives and set up cards	People	3,300
1. Transfer employment and get rid of poverty	—	—
2.3 Help poor households who set up archives and set up cards to achieve employment	People	12

3.relocating the poor	—	—
4. Poverty alleviation through education	—	—
5. Healthy poverty alleviation	—	—
6. Ecological protection and poverty alleviation	—	—
7. Undercover protection	—	—
8. Social poverty alleviation	—	—
9. Other projects	—	—
III. Awards (content, level)	—	—

(4) Follow-up accurate poverty alleviation plan

2020 is the decisive year for poverty alleviation and on-site supervision will continue to be carried out. Carry out real-time tracking of major poverty alleviation projects under construction and urge them to speed up the progress and assist in solving various problems encountered in construction. Supervise and urge contracted projects to speed up construction on the ground. Get more projects to sign up. Our company exceeded the three-year target of helping no less than 5,000 people, and continued to help the registered poor people lift themselves out of poverty and increase their incomes without returning to poverty.

3. The situation related to environmental protection

Whether the listed company and its subsidiaries belong to the key pollutant discharge units announced by the environmental protection department

Yes

Name of company or subsidiary	Names of main pollutants and characteristic pollutants	Discharge mode	Number of discharge ports	Distribution of discharge outlets	Emission concentration	Implemented pollutant discharge standards	Total emission	Approved total emissions	Excessive discharge
1	Yangling Benxian Agricultural Industry Group Co., Ltd. Construction and operation of pollution prevention facilities

Serial No.	Name of company	Name of pollution prevention and control facilities	Treatment process	Processing capacity	Operation time	Operation condition
1	Yangling Benxiang Agricultural Industry Group	Sewage treatment	Anaerobic + aerobic (A/O)	350 cubic meters per day	It was put into operation in July 2006 and	Running normally

	Co., Ltd.	system	process)		upgraded in 2019.	
2	Beijing Qianxihe Food Co., Ltd.	Sewage treatment system	Biological contact oxidation process	1500 cubic meters per day	Put into operation in 2004	Running normally
3	Hebei Qianxihe Meat Industry Co., Ltd.	Sewage treatment system	SBR process + A/O process	1500 cubic meters per day	Put into operation in 2006	Running normally
4	Liaoning Qianxihe Food Co., Ltd.	Sewage treatment system	Biological contact oxidation process	1400 cubic meters per day	Put into operation in 2006	Running normally
5	Chengdu Hope Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	800 cubic meters per day	Put into operation in 2009	Running normally
6	Linyi Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	1200 cubic meters per day	Put into operation in 2015	Running normally
7	Qiu County Liuhe Kangyuan Food Co., Ltd.	Sewage treatment system	Hydrolytic acidification + A/O process	1000 cubic meters per day	Put into operation in 2014	Running normally
8	Linyi Liuhe Hongchen Agriculture and Animal Husbandry Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	1000 cubic meters per day	Put into operation in March 2009	Running normally
9	Lanling New Hope Liuhe Hongjun Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	600 cubic meters per day	Put into operation in 2013	Running normally
10	Shandong New Hope Liuhe Group Co., Ltd. Pingyi Refrigeration Factory	Sewage treatment system	Biological contact oxidation process	1200 cubic meters per day	Acquired in 1997 and operated with the original pool, and improved again in 2002/2004	Running normally
11	Qingdao Tianrun Food Co., Ltd.	Sewage treatment system	SBR process + A/O process	2000 cubic meters per day	In 2005, the SBR system was put into operation, and in 2009, the A/O process was put into operation	Running normally
12	Xiaoyi New Hope Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	1600cubic meters per day	Put into operation in 2012 and upgraded the process in 2016 to increase the number of biofilters	Running normally
13	Yishui New Hope Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	1800 cubic meters per day	It was put into operation in 2010 and improved again through sewage treatment system in 2014	Running normally
14	Guantao Liuhe Food Co.,	Sewage	Anaerobic +	3400 cubic meters	It was put into operation	Running

	Ltd.	treatment system	aerobic (A/O process)	per day	in 2009 and improved again in 2017	normally
15	Binzhou Liuhe Longda Agriculture and Animal Husbandry Co., Ltd.	Sewage treatment system	SBR process	500 cubic meters per day	Put into operation in 2008	Running normally
16	Wudi Liuhe Xinyang Food Co., Ltd.	Sewage treatment system	SBR	1000 cubic meters per day	2006	Running normally
17	Zouping Liuhe Animal Husbandry Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	1000 cubic meters per day	It was put into operation in 2004 and upgraded in 2012	Running normally
18	Shanxian Liuhe Feed Co., Ltd. Food Branch	Sewage treatment system	Hydrolytic acidification + BRN	1300 cubic meters per day	Put into operation in 2012	Running normally
19	Huaibei New Hope Liuhe Food Co., Ltd.	Sewage treatment system	SBR process	1000 cubic meters per day	Put into operation in 2007	Running normally
20	Cao County Liuhe Food Co., Ltd.	Sewage treatment system	FBR process	1400 cubic meters per day	Put into operation in 2007	Running normally
21	Jiaxiangxin Hope Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	3000 cubic meters per day	September 2017	Running normally
22	Yuncheng Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	800 cubic meters per day	It was put into operation in 2006 and respectively upgraded in 2011 and 2017	Running normally
23	Anshan Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	2000 cubic meters per day	Put into operation in 2007	Running normally
24	Panjin Liuhe Agriculture and Animal Husbandry Co., Ltd.	Sewage treatment system	Biological contact oxidation process	1200 cubic meters per day	Put into operation in 2011	Running normally
25	Dong A Liuhe Lujia Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	600 cubic meters per day	Put into operation in 2010	Running normally
26	Liaocheng Liuhe Ronda Agriculture and Animal Husbandry Co., Ltd.	Sewage treatment system	High efficiency air floatation + hydrolytic acidification (Acano process)	2500 cubic meters per day	It began operation in 2013 and was accepted in May 2015	Running normally
27	Shenxian New Hope Liuhe Qingsizhai Food Co., Ltd.	Sewage treatment	Combined air floatation and	2000 cubic meters per day	It was put into operation in December 2013 and	Running normally

		system	biological contact oxidation (A/O process)		accepted in July 2014	
28	Yanggu Liuhe Luxin Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	3000 cubic meters per day	The contact oxidation process was put into operation in 2009, and the A/O process was put into operation in 2015	Running normally
29	Weifang Tianhui Food Co., Ltd.	Sewage treatment system	Contact oxidation process + SBR	700 cubic meters per day	The contact oxidation process was put into operation in 2007 and SBR in 2009	Running normally
30	Weifang Hesheng Garden Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	5700 cubic meters per day	Put into operation in 2018	Running normally
31	Zhecheng Liuhe Food Co., Ltd.	Sewage treatment system	AAO process	900 cubic meters per day	It was put into operation in 2011, and the standard was improved by the end of 2016	Running normally
32	Luoyang Liuhe Huiquan Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	1000 cubic meters per day	It was put into operation in 2008 and improved again in 2015	Running normally
33	Hebi Liuhe Zhizhen Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	2000 cubic meters per day	It was put into operation in 2011, and the bid upgrading was carried out in 2015	Under debugging
34	Laiwu New Hope Liuhe Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	3000 cubic meters per day	2014	Running normally
35	Dezhou Liuhe Zhikang Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	800 cubic meters per day	Put into operation in 2008	Running normally
36	Feixian Liuhe Huahai Food Co., Ltd.	Sewage treatment system	Anaerobic + aerobic (A/O process)	2000 cubic meters per day	It was put into operation in 2013 and improved again through sewage treatment system in 2016	Running normally
37	Fuxin Liuhe Agriculture and Animal Husbandry Co., Ltd. Food Branch	Sewage treatment system	Anaerobic + aerobic (A/O process)	1500 cubic meters per day	Put into operation in 2007	Running normally
38	Dezhou Liuhe Jinshan Food Co., Ltd.	Sewage treatment system	Biological contact oxidation process	500 cubic meters per day	Put into operation in 2017	Running normally
39	Junan New Hope Liuhe Food	Sewage	Anaerobic +	1200 cubic meters	Put into operation in 2012	Running

	Co., Ltd.	treatment system	aerobic (A/O process)	per day		normally
40	Guangzhou Hope Feed Co., Ltd.	Tail gas treatment system	SNCR denitrification		2017	Normal
41	Hongyuan New Hope Yak Industry Co., Ltd.	Sewage treatment system	High efficiency air floatation + hydrolytic acidification (A/O process)	600 cubic meters per day	Put into operation in September 2019	Running normally

Other information related to environmental protection.

None.

XIX. Notes on other important matters

√ Applicable □ Not Applicable

1. New Hope Group Co., Ltd. increased its holdings of the company by 48,493,655 shares, accounting for 1.15% of the total capital stock of the company, with the increased amount of 303,656,091.54 Yuan (excluding transaction fees). After the completion of the increase plan, New Hope Group held 1,048,163,129 shares of the company, accounting for 24.86% of the total capital stock of the company.

2. In order to improve work efficiency and work in a planned way to carry out the financing, according to the actual situation of production and operation, the total guarantees, which the company and holding subsidiaries afforded in 2019, would not exceed the maximum amount of RMB 36.9233 billion Yuan, accounting for 171.14% of the net asset of 21.5751232 billion Yuan attributable to shareholders of listed companies in company's latest audition (2018). That matter was approved by the company's second extraordinary shareholders' meeting in 2019.

3. In order to improve work efficiency and strengthen strategic cooperation with large raw material suppliers, according to the actual needs of the procurement business, the raw material purchasing payment guarantee, which the company afforded to 115 subsidiary companies in the raw material purchasing contract signed during the term of authorization with 15 feed raw materials suppliers such as COFCO Trade Co., Ltd, would not exceed 1.797 billion Yuan, being 8.33% of the net asset of for the company's latest audited (2018) attributable to shareholders of listed companies with a net worth of 21.5751232 billion Yuan attributable to shareholders of listed companies in company's latest audition (2018). That matter was approved by the company's 2018 annual shareholders' meeting.

4. According to the *Rules Governing of Stock Listing of Shenzhen Stock Exchange*, the purchase and sale of products between the company and the related party such as New Hope Group Co., Ltd. or its subsidiary companies constitute related transaction. According to the actual needs of production and operation, the company has signed the daily purchase and sales agreement with each related party. In 2019, the amount of the company's purchase of feed materials, dairy products and other products from the related parties and their subsidiary companies should not exceed RMB 65 million Yuan; The labor services provided by related parties and their subsidiary companies should not exceed RMB 153 million Yuan; Leasing assets to related parties should not exceed RMB 5 million Yuan; The sales amount of feed, packaging, meat products, cooked food and other products to related parties and their subsidiary companies should not exceed RMB 228.8 million Yuan.

5. In order to better develop the company's main business, guarantee the company's capital demand in the process of operation and reduce the cost of capital, according to *Management Method for Debt Financing Instruments for Non-financial Enterprises in the*

Inter-bank Bond Market and other relevant provisions, the company decided to apply to the National Association of Financial Market Institution Investors to issue ultra-short-term financing bonds of RMB 3 billion Yuan, and that matter was approved by the company's 2018 annual shareholders' meeting.

The company has received the *Notice of Acceptance of Registration* issued by the NAFMII. The NAFMII agrees to accept the registration of the company's ultra-short-term financing bond with the amount of RMB 3 billion Yuan. The registered amount shall be valid for 2 years from the date of the *Notice of Acceptance of Registration* issued by the NAFMII.

6. The term of the company's 7th board of directors expired in May 2019. According to the relevant provisions of China Securities Regulatory Commission and Shenzhen Stock Exchange, in the views solicited in advance from shareholders, independent directors and so on, the company's board of directors elected the eighth board of directors' candidates: Yonghao Liu, Chang Liu, Hang Wang, Jianxiong Li, Cheng Deng, Deng Feng, Huanchun Chen, and Manli Cai, and the term is three years from the date of the election passed by the company's shareholders' meeting. The general election was approved by the company's first extraordinary shareholders' meeting in 2019.

7. The term of the company's 7th board of supervisors expired in May 2019. According to relevant regulations of China Securities Regulatory Commission and Shenzhen Stock Exchange, the board of supervisors elected Zhigang Xu and Fang Yang as supervisor candidates of shareholders for the eighth board of supervisors, and the term is three years from the date of the election passed by the company's shareholders' meeting. The general election was approved by the company's first extraordinary shareholders' meeting in 2019.

8. In order to promote the public issuance of convertible corporate bond for A shares smoothly, in combination with the practical situation of the company, the company's second meeting of the eighth board of directors decided to adjust the public issuance scale of convertible corporate bond for A shares from no more than 5 billion Yuan (including 5 billion Yuan) to no more than RMB 4 billion Yuan (including 4 billion Yuan), and all investments would be put in the pig breeding project after deducting distribution costs.

On January 3, 2020, the company publicly issued 40 million convertible corporate bonds with the value of \$100 for each bond and a total amount of 4 billion Yuan. The listing date was February 4, 2020.

9. In order to better develop the company's main business, guarantee the company's capital demand in the process of operation and reduce the cost of capital, according to *Management Method for Debt Financing Instruments for Non-financial Enterprises in the Inter-bank Bond Market* and other relevant provisions, the company decided to apply to the National Association of Financial Market Institution Investors to issue medium term notes of no more than 5 billion Yuan (including 5 billion Yuan), and that matter was approved by the company's second extraordinary shareholders' meeting in 2019.

On March 9, 2020, the company issued the first 2020 medium term notes (epidemic prevention and control debt), with an amount of RMB 2 billion Yuan, an interest rate of 3.43%, and the term of 3 years.

10. As of November 28, 2019, through centralized bidding transaction method, the company had purchased 75,858,790 shares, accounting for 1.799% of the company's total share capital at present. The highest transaction price is 18.97 Yuan / share, the lowest transaction price is 7.01 Yuan / share, and the total amount paid is 608,372,528.51 Yuan (excluding transaction fees). The company completed the share repurchase.

2. Salary policy

The company's front-line production staff implement the piece work system, the marketing staff implement the joint marketing remuneration system, and the timed employees implement the post grade salary and performance appraisal wage system.

According to the company's net profit growth and per capita efficiency growth, as well as the salary level of employees in the same industry, the government wage guidelines, the price increase index published by the statistical department, and so on, the employee salary adjustment determines the overall salary adjustment ratio and the total salary adjustment, and then adjusts the individual assessment of each business unit and employee.

Overtime pay and leave pay shall be carried out in accordance with the provisions of the State.

In accordance with the *Labor contract Law of the People's Republic of China* and the relevant rules and regulations of the company, the company has handled and paid the corresponding insurance for its employees in accordance with the law.

3. Training plan

In 2020, New Hope University will continue to undertake the work of corporate culture construction and personnel training to help employees achieve corporate cultural integration, professional skills upgrading, development bottlenecks, career transformation and upgrading, and the formation of lifelong learning habits. The focus of work includes the following four items:

1) Promote the strategic landing of the company and train competent talents in key positions

Xinying 365 plan: to support the urgent employment needs of business development, our company will adopt the way of rotational training and collective training in 2020 to train new school recruiting graduates. Taking the "New Hope University" APP as the carrier, explore digital learning, and carry out agile, lightweight and flexible training for new employees. Through a year of continuous training and follow-up, help new employees to achieve cultural integration, professional development, analysis and problem-solving skills, to meet the needs of the position. In addition, in order to meet the company's requirements for accelerated training of strategic reserve talents, according to proportion, train a successor team for basic management positions (such as field managers), discover potential, and apply pre-training to help them run.

New employee Plan: conduct training for new employees, focusing on the promotion and learning of corporate culture, strategy and business. The goal is to accelerate the rapid integration of new employees into the company, be competent, and improve the talent retention rate.

Star series plan: this series of plans are divided into three molecular plans: the Xinghuo Program, the Xingrui Monitor Program

and the Xingyao Plan. The training targets are mainly marketing personnel, technical service personnel and experienced department heads of molecular companies. The aim is to improve the technical service level of the company through training the transformation from simple marketing to technical marketing, and to equip the trainees with technical experts in large-scale public relations and services. At the same time, train a group of internal industrial technical coaches for the company.

Wing series plan: this series of plans are divided into green wing plan and iron wing plan, which are respectively aimed at the talent development plan of the company's preparatory stocking staff and managers with certain stocking management basis. The aim is to improve the technical management ability of stocking personnel and optimize the management process.

Navigation series plan: this series of plans are divided into Qinghang plan, Yuanhang voyage plan and Linghang plan, which are aimed at new college students in professional positions, excellent technicians and supervisors in large-scale farms, excellent supervisors and new directors in large-scale farms, respectively. Through the study and discussion of management and technical knowledge and pig farm practice, our company can train a group of reserve yard managers who can organize and plan production and achieve performance goals efficiently.

2) Promote the sustainable development of the operation and strengthen the leading force of the waist

New manager project: the rapid development of the company's business has led many outstanding employees to management positions, and it is often difficult for new managers to quickly understand their role transformation as managers. The goal of this project is to help the new front-line manager to change the management role smoothly, master the team, performance, relationship and other three aspects of management content, clear responsibility, quickly have the position competence.

Elite plan: select high-potential talents and design a systematic accelerated growth plan to help the company's cadres become younger; open up the development channels of young talents to solve the problem of opportunities for the development of high-potential talents; activate grass-roots management teams and strengthen the flow of talents to promote the benign renewal of the team. Through executive dialogue, benchmarking visits, mentoring system to stimulate elite talent morale and self-drive, expand their horizons, to solve practical business problems-oriented design online-offline learning, flip the classroom, in order to help young cadres become talents quickly.

Xinxiongying plan: to build a backup echelon of middle and high-level management cadres for the rapid development of the company's business, such as general manager of pig-raising column settlement, integrated general manager and so on. Precipitate the practical experience of operation and management and speed up the training of future leaders.

New Yingying Plan and EMBA Project: empower the successor cadres of the company's core senior management team, implement the company's culture and philosophy in the learning project, take business strategy as the orientation, combine training and war, inspire personnel to constantly learn and improve various abilities and become outstanding leaders. Sort out the post competency standards, spread the advanced experience of the industry, and assist the development of senior leadership in various ways such as action learning, experience extraction and online learning.

3) Support business transformation, extract and precipitate organizational knowledge and wisdom

Sort out the internal curriculum system: extract the experience and wisdom of excellent staff, develop internal courses, and guide the continuous improvement of the business.

Two-line training of internal enablers: train the company's internal trainers and mentors to teach them teaching skills and guidance skills, so that they can more effectively spread advanced experience inside and outside the company and guide employees to reach a consensus; train mentors, help mentors master staff counseling skills, personalized guidance reserve talent rapid growth.

4) The construction of digital platform to promote the construction of learning organization

Upgrade the online learning platform to make it an important way to unify the thinking and cultural values of the whole staff, and to achieve strategic goals; an important support for personnel training, combat training, selection, evaluation and appointment; an important platform for knowledge management, continuous innovation and efficient learning; an accelerator for digital transformation and efficient management of talents. Through internal curriculum development, the creation of key post learning sequence, the introduction of external online learning resources, etc., to form a systematic learning path map to facilitate self-study. In view of the

difficult problems such as the closure and dispersion of business places, take the online platform and Wechat learning community as the carrier to promote the company concept, guide employees to cross-regional multi-dimensional learning, and test the learning effect by means of online competitions and examinations.

There should be three persons participating that meeting, and there were three there. The meeting was held by Mr. Zhi Hu, chairman of the committee. In the meeting, the *Full Content and Main Body of the Report for the First Quarter of 2019* was particularly examined and approved.

2. The audit committee of the eighth board of directors of the company is composed of three directors of Manli Cai, Deng Feng and Jianxiong Li, and Manli Cai is the chairman. During the reporting period, the audit committee of the eighth board of directors held two meetings to review the financial reports for the half year and the third quarter of 2019.

(1) On August 16, 2019, the first regular meeting of the audit committee of the eighth board of directors of the company in 2019 was held in the conference room of the company in Beijing. There should be three persons participating that meeting, and there were three there. The meeting was held by Ms. Manli Cai, chairman of the committee. In the meeting, the *Full Content and Abstract of the 2019 Semi-annual Report* and the *Proposal on the Risk Persistence Assessment Report of the New Hope Finance Co., Ltd.* were examined and approved.

(2) On October 18, 2019, the audit committee of the eighth board of directors of the company held the second regular meeting in 2019 by means of communication vote. In the meeting, *Full Content and Main Body of the Report for the Third Quarter of 2019* was particularly examined and approved.

(II) Performance of the functions and duties of the nomination committee of the board of directors:

1. The seventh nomination committee of the board of directors of the company is composed of five directors of Tiejun Wen, Yonghao Liu, Chang Liu, Zhi Hu and Deng Feng, and Tiejun Wen is the chairman. During the reporting period, the nomination committee of the seventh board of directors held a meeting.

(1) On April 30, 2019, the first meeting of the nomination committee of the seventh company's board of directors in 2019 was held by means of communication vote. In the meeting, the *Proposal on Nominating Candidates for Non-independent Directors of the Company* and the *Proposal on Nominating Candidates for Independent Directors of the Company* were examined and approved, and it was decided to nominate Mr. Yonghao Liu, Ms. Chang Liu, Mr. Hang Wang, Mr. Jianxiong Li and Mr. Cheng Deng as candidates for non-independent directors of the eighth board of directors of the company, and Mr. Deng Feng, Mr. Huanchun Chen and Ms. Manli Cai as candidates for independent directors of the eighth board of directors of the company.

2. The nomination committee of the eighth board of directors of the company is composed of three directors of Deng Feng, Chang Liu and Manli Cai, and Deng Feng is the chairman. During the reporting period, the nomination committee of the eighth board of directors held a meeting.

(1) On June 6, 2019, the first 2019 meeting of the nomination committee of the eighth board of directors of the company was held in the conference room of Beijing company. There should be three persons participating that meeting, and there were three there. In the meeting, the *Proposal on Nominating Candidates for President of the Company and Secretary of the Board of Directors* and the *Proposal on Nominating Candidates for the New Senior Management* were examined and approved.

(III) Performance of functions and duties of the strategic development committee of the board of directors:

The strategic development committee of the seventh board of directors of the company is composed of five directors: Chang Liu, Yonghao Liu, Hang Wang, Tiejun Wen and Deng Feng, and Chang Liu is the chairman. During the reporting period, the strategic development committee of the seventh board of directors held a meeting.

(1) On March 22, 2019, the first meeting of the strategic development committee of the seventh board of directors of the company in 2019 was held by means of communication vote. In the meeting, the *Proposal on the Company's Plan of Public Issuing A Shares Convertible for the Company's Bond*, the *Proposal on the Company's Pre-arranged Planning of Public Issuing A Shares Convertible for the Company's Bond*, and the *Proposal on the Company's Fund-raising Investment Project Feasibility of Public Issuing A Shares Convertible for the Company's Bond* were examined and approved.

(IV) Performance of functions and duties of the compensation and appraisal committee of the board of directors

The compensation and appraisal committee of the seventh board of directors of the company is composed of four directors of Deng Feng, Chang Liu, Zhi Hu and Jianxiong Li, and Deng Feng is the chairman. During the reporting period, the compensation and appraisal committee of the seventh board of directors held a meeting.

On April 30, 2019, the first meeting of the company's compensation and appraisal committee of the seventh board of directors in 2019 was held by communication vote. In the meeting, the *Proposal on the Equity Incentive Draft* was particularly examined and approved.

VII. The work of the board of supervisors

During the supervision activities and during the reporting period, the board of supervisors found out whether there were risks in the company

Yes No

The board of supervisors has no objection to the supervision matters during the reporting period.

VIII. Evaluation and motivation of senior managers

According to the relevant regulations of the company's executive performance appraisal and salary incentive system, the company's directors and senior managers report to the board of directors' compensation and performance committee and evaluate themselves. The compensation and performance committee evaluates the performance of directors and executives based on the following four aspects:

- (1) The achievement of the company's main financial indicators and business objectives;
- (2) The main responsibilities of senior executives and the performance and budget of the units under their jurisdiction;
- (3) The construction of corporate governance and internal control system;
- (4) Senior executives' innovation ability and leadership.

IX. Internal control situation**1. Details of major internal control defects found during the reporting period**

Yes No

2. Internal control self-evaluation report

Full disclosure date of internal control evaluation report	Apr. 1, 2020

Audit's Report

To the shareholders of New Hope Liuhe Co., Ltd.:

I. Audit opinion

We have audited the financial statements of New Hope Liuhe Co., Ltd. ("New Hope"), which comprise the consolidated and parent company's balance sheet as at December 31, 2019, the consolidated and parent company's income statement, consolidated and parent company's cash flow statement, consolidated and parent company's statement of changes in shareholders' equity for the year ended 2019, and the notes to the relevant financial statements.

We believe that in all material respects, the attached financial statements have been prepared in accordance with the provisions of the accounting standards for business enterprises, and give a true and fair view of the consolidated and the parent company's financial position of New Hope as at December 31 2019, and of its consolidated and parent company's financial performance and its consolidated and parent company's cash flows for the year ended 2019.

II. Basis for audit opinion

We conducted our audit in accordance with China Standards on Auditing issued by the China Institute of Certified Public Accountants ("CICPA"). Our responsibilities under those standards are further described in the Auditor's responsibilities for the audit of financial statements section of our report. In accordance with the CICPA's Code of Ethics for Professional Accountants (the "Code"), we are independent of New Hope and have fulfilled our other ethical responsibilities in accordance with the Code. We believe that the audit evidence we have obtained is enough and appropriate to provide a basis for our audit opinion.

III. Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the consolidated financial statements of the current period. These matters were addressed in the context of our audit of the consolidated financial statements, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key matters identified in the audit are as follows:

(I) Goodwill impairment	
Please refer to the notes "V. (20) Impairment of long-term assets" and "VII. (16) Goodwill" to the financial reports.	
Reason for being a key audit matter	How our audit addressed the key audit matter
The original value of goodwill in the consolidated balance sheet of New Hope is RMB 1257.2084 million Yuan, and the accumulated balance of impairment provision is RMB 22.4523 million Yuan. At the end of each year, the management of New Hope conducts an impairment test on goodwill, which requires an estimate of the recoverable	Our audit procedures for goodwill impairment mainly include: (1) Test and evaluate the effectiveness of internal control related to goodwill impairment; (2) Evaluate the rationality and consistency of the goodwill impairment test methods adopted by the management and the forecast data and key assumptions used in the impairment test,

<p>amount of related asset groups including goodwill. When determining the present value of the expected future cash flows of the asset group, the management of New Hope needs to reasonably predict the average growth rate of the future cash flows generated by the relevant asset group and reasonably determine the appropriate discount rate, which involves the management to use significant accounting estimation and judgment. Therefore, we regard goodwill impairment as a key audit matter.</p>	<p>especially check whether the relevant assumptions are consistent with the overall economic environment, industry conditions, operating conditions, historical experience, operating plans, etc.</p> <p>(3) Test the accuracy, completeness and relevance of the discount rate, future sales growth rate, estimated gross profit margin, and related expenses adopted by the management in the impairment test, and review the internal consistency of relevant information in the impairment test;</p> <p>(4) Check the rationality of the cash flow forecast and test whether the management's calculation of the present value of the expected future cash flow is accurate based on the difference between the asset group's previous earnings forecast and the actual realization as well as the development trend of the industry concerned;</p> <p>(5) Review the adequacy of management's disclosure of goodwill.</p> <p>Based on the audit evidence obtained, we conclude that the results of the goodwill impairment test assessed by management are reasonable.</p>
<p>(II) The investment in China Minsheng Banking Corporation Ltd. was accounted according to the equity method</p>	
<p>Please refer to the notes "VII. (9) Long-term equity investment" and "VII. (46) Investment income" to the financial reports.</p>	
<p>Reason for being a key audit matter</p>	<p>How our audit addressed the key audit matter</p>
<p>New Hope accounts the investments that can exert significant influence on the invested entities according to the equity method. In this period, New Hope continues to maintain the major judgment that has a significant influence on China Minsheng Banking Corporation Ltd. (hereinafter referred to as "Minsheng Bank"), which holds 4.1759% of the shares, and conducts equity accounting.</p> <p>The management of New Hope believes that New Hope has representatives on the board of directors of Minsheng Bank and can actively participate in the operation and financial policies of Minsheng Bank. Therefore, New Hope has a significant impact on Minsheng Bank.</p> <p>Since the financial statements of Minsheng Bank have a significant impact on the consolidated financial statements of New Hope, we regard the investment of Minsheng Bank calculated by New Hope using equity method as a key audit matter.</p>	<p>The audit procedures for New Hope using the equity method to account the investment in Minsheng Bank mainly include:</p> <p>(1) Consult the articles of association of Minsheng Bank, analyze the shareholder structure and major operational decision-making mechanism of Minsheng Bank;</p> <p>(2) Review the composition of the board of directors of Minsheng Bank and the appointment and removal of New Hope representatives on the board of directors, and evaluate whether there are significant changes compared with the previous year;</p> <p>(3) Check the announcements of the board meetings of Minsheng Bank and check the participation of directors dispatched by New Hope in the board meetings of Minsheng Bank;</p> <p>(4) Communicate and discuss with the management of New Hope, and assess the actual impact of New Hope on the major decisions and operational activities of Minsheng Bank.</p> <p>Based on the above, the evidence we have obtained in the process of performing the audit work supports the judgment of the management on the significant impact of Minsheng Bank and adopts the equity accounting method.</p>

IV. Other information

The management of New Hope is responsible for the other information. The other information comprises the information included in the 2019 annual report, other than the financial statements and our audit report.

Our audit opinion on the financial statements does not cover the other information and we do not express any form of assurance

conclusion thereon.

In conjunction with our audit of the financial statements, it is our responsibility to read the other information and, in doing so, consider whether the other information is materially inconsistent or appears to be materially misrepresented with the financial statements or with what we learned during the audit.

Based on the work we have performed, if we determine that there is a material misstatement of this other information, we should report that fact. We have nothing to report in this regard.

V. Responsibility of management and governance for financial report

The management of New Hope is responsible for the preparation of financial statements that give a true and fair view in accordance with the provisions of accounting standards for business enterprises and design, implement and maintain the necessary internal control, so that the financial statements are free from material misstatement due to fraud or error.

In preparing the financial statements, management is responsible for assessing New Hope's ability to continue as a going concern, disclosing matters relating to going concern, if applicable, and applying the going concern assumption, unless management plans to liquidate New Hope, terminate operations, or has no realistic alternative.

Those who charged with governance are responsible for overseeing New Hope's financial reporting process.

VI. Responsibility of certified public accountants for auditing financial report

Our goal is to obtain reasonable assurance that the financial statements are free from material misstatement due to fraud or error and to issue an audit's report containing the audit opinion. Reasonable assurance is a high level of assurance, but it does not guarantee that the audit conducted in accordance with the audit standards will always detect a material misstatement when it exists. Misstatements may be due to fraud or error and are generally considered material if it is reasonably expected that misstatements, individually or collectively, may affect the economic decisions made by financial statement users based on financial statements.

We exercise professional judgment and maintain professional skepticism in conducting audits in accordance with auditing standards. At the same time, we also perform the following work:

(1) Identify and assess material misstatement risks in financial statements due to fraud or error, design and perform audit procedures to address these risks, and obtain enough and appropriate audit evidence as a basis for the issuance of audit opinions. Because fraud may involve collusion, forgery, deliberate omissions, misrepresentation or override of internal control, the risk of not detecting a material misstatement resulting from fraud is greater than one resulting from error.

(2) Understand the internal control related to audit to design appropriate audit procedures.

(3) Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and relevant disclosures made by management.

(4) Draw conclusions on the appropriateness of management's use of the going concern basis of accounting. At the same time, based on the audit evidence obtained, conclusions are drawn on whether there are material uncertainties in matters or circumstances that may cause material doubt about your company's ability to continue as a going concern. If we conclude that there is a material uncertainty, the auditing standards require us to draw the attention of statement users to relevant disclosures in financial statements in the audit report. If the disclosure is insufficient, we should express a qualified opinion. Our conclusions are based on information available up to the date of the audit report. However, future events or circumstances may cause New Hope to cease to continue as a going concern.

(5) Evaluate the overall presentation, structure and content of the financial statements, including disclosure, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

(6) Obtain sufficient and appropriate audit evidence with respect to the financial information of the entity or business activities in New Hope to express an audit opinion on the financial statements. We are responsible for the direction, supervision and performance of the group audit and take full responsibility for our audit opinion.

We communicate with governance on planned audit scope, timing, and significant audit findings, including the internal control deficiencies that we identified during the audit that are of concern.

We also provide a declaration to the governance that we have complied with the ethical requirements associated with our

independence, and to communicate with the governance on all relationships and other matters that may reasonably be considered to affect our independence, as well as the relevant precautions (if applicable).

From the issues communicated to those who charged with governance, we determine which issues are most important to the current financial statement audit and thus constitute key audit matters. We describe these matters in our audit report, unless law or regulation precludes their public disclosure or when, in extremely rare cases, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

III. Basic information of the company

(I) History and evolution of the company

New Hope Liuhe Co., Ltd. (formerly known as Sichuan New Hope Agricultural Co., Ltd.) (hereinafter referred to as the company or our company) was approved by Sichuan Provincial People's Government Chuanfuhuan (1997) Document No. 260 to establish as the changing of the original Mianyang Hope Feed Co., Ltd. on March 4, 1998. The registered capital of the company was RMB 140,020,000.00 Yuan on establishment date. On March 11 and September 15, 1998, the company publicly issued 36,000,000 public shares to the public and 4,000,000 internal employee shares to the internal employees, respectively listed and traded on the Shenzhen Stock Exchange, with stock code: 000876. After the company's stock was listed, through the transfer of shares in May, 2000, the allotment of shares in March 2001, the transfer of shares in July 2002, October 2002, June 2008 and May 2010 the transfer of shares, the implementation of the *Company Equity Division Reform* in August 2006, the completion of the material assets reorganization in October 2011 and the execution of the profit compensation scheme for the material assets reorganization in July 2014, the company's total share capital has changed to be 1,729,507,365 shares.

According to the company's extraordinary shareholders' general meeting resolution on September 4, 2013 and Commission *Reply on the Approval of Non-public Stock Issuing of New Hope Liuhe Co., Ltd* (CSRC Permission [2014] No. 565) checked by China Securities Regulatory approval, the company issued non-public stock of 354,609,927 shares to five specific shareholders including South Hope Industrial Co., Ltd. The shareholders made contribution in monetary capital, and the non-public issuing was completed on August 26, 2014. The total share capital of the company was changed to 2,084,117,292 shares upon completion of this non-public issuing.

According to the resolution of the company's 2015 annual general meeting of shareholders, based on the company's total share capital of 2,084,117,292 shares, the capital reserve was used to transfer 10 shares to the increased capital stock with every 10 shares.

The relevant procedures for the transfer of shares were completed on June 27, 2016, after which the total share capital of the company was changed to 4,168,234,584 shares.

According to the resolution of the company's second extraordinary general meeting of shareholders held on June 29, 2016, and the approval of CSRC Permission [2016] No. 3187 issued by China Securities Regulatory Commission, the company changed the total share capital of the company to 4,216,015,009 shares on January 16, 2017 through issuing shares and paying cash to purchase 70% of the equity of Yangling Bengxiang.

As of December 31, 2019, the registered capital of the company is RMB 4,216,015,009 Yuan, and the total share capital is 4,216,015,009 shares, of which there are 18,057,758 outstanding shares under limited terms and 4,197,957,251 outstanding shares under unlimited terms.

(II) Industry situation of the company

After years of development after its establishment, up to the end of December 2019, the company has successively directly or indirectly controlled 573 subsidiaries, 18 consortium and five of joint venture in 29 domestic provinces, municipalities directly under the central government, autonomous regions, special administrative region (including Sichuan, Yunnan, Guizhou, Beijing, Shanghai, Chongqing, Guangdong, Hainan, Hebei, Henan, Shandong, Shanxi, Jiangsu, Anhui, Zhejiang, Jiangxi, Hubei, Hunan, Shaanxi, Heilongjiang, Jilin, Liaoning, Gansu, Tibet, Inner Mongolia, Guangxi, Ningxia, Tianjin, Hong Kong) and overseas 17 countries (including: Vietnam, Cambodia, the Philippines, Bangladesh, Indonesia, Myanmar, Laos, Nepal, Sri Lanka, Singapore, Egypt, Turkey, South Africa, Poland, the United States, India, Nigeria) by investing in new set or acquisition, and been an industry group company taking feed, breeding, slaughtering and meat products as the core competitiveness.

(III) Company's address, business scope, etc

Company business license registration number: 91510000709151981F; Legal representative: Chang Liu; Registered address: National High-tech Industrial Development Zone, Mianyang City, Sichuan Province; Headquarters address: No. 376, Jinshi Road, Jinjiang Industrial Park, Chengdu City, Sichuan Province.

The company's business scope: the production and processing of compound feed, concentrated feed and concentrated supplementary feed (limited to the operation of branches) (the above items and the term of the license shall prevail). General business items (the following scope does not include pre-license items, post-license items operating with permits or approval documents): crops and other crops planting; The raising of livestock; The raising of pigs; Poultry farming; Wholesale and retail of goods; Import and export business; Project investment and management; Scientific and technological exchange and promotion of the service sector.

(IV) Company's main products

The company's main feed products include pig feed, poultry feed, fish feed, etc. The main products of pig industry include breeding pigs and commercial pigs. Poultry industry mainly includes breeding poultry, commercial poultry, poultry slaughter, etc. Food mainly includes livestock slaughter, meat products processing, central kitchen and so on.

(V) Approved date for submitting financial report

The company's 2019 financial statements were approved and submitted by the board of directors on March 31, 2020.

(VI) Scope of consolidated financial statements

As of December 31, 2019, the company has 573 subsidiaries included in the consolidated financial statements. Compared with the previous year, 96 new subsidiaries were added in the scope of consolidated financial statements this year, and 36 subsidiaries were no longer included in the scope this year. For details, please refer to the relevant content indexed with "Note 8, changes in the consolidated scope" and "Note 9, interests in other subjects".

IV. The basis for the preparation of financial statements

1. Compilation basis

The company compiled the 2019 annual financial statement, taking continue operation as the prerequisite, based on the accrual basis, according to the actual transactions and events, and in accordance with the *Accounting Standards for Enterprises - Basic Standards* (revised in 2014) issued by Ministry of Finance, 42 rules of the specific accounting standards, guidelines of accounting standard for enterprises, the explanation of accounting standards for enterprises and other related regulations (hereinafter called the “accounting standards for enterprises”), and the disclosure rules of the *Information Disclosure and Compilation Rules for the Company Publicly Issuing Securities No. 15 - General Provisions of the Financial Report* (revised in 2014) issued by China Securities Regulatory Commission.

2. Sustainable operation

The company operates normally and continues to make profits, and has no plans to terminate operations or liquidate; The company will be a going concern for the foreseeable future (not less than 12 months from the end of this report).

V. Important accounting policies and accounting estimates

Tips for specific accounting policies and accounting estimates:

Based on the practical production and operation characteristics, according to the provisions of the relevant accounting standard for business enterprises, the company has made the specific accounting policies and accounting estimates for the provision for bad debts of accounts receivable, the inventory valuation, the depreciation of productive biological asset, the depreciation of fixed assets, the amortization of intangible assets, the revenue recognition and the other transactions and events. For details, see the note 5 “(10) Financial instruments, (11) Inventory, (15) Fixed assets, (18) Productive biological assets, (19) Intangible assets, (28) Income”. For the indicative description of the company's important accounting judgment and estimation made in the application of accounting policies, please refer to “Note 5: (34) Important accounting judgment and estimation”.

1. Statement of compliance with accounting standards for enterprises

The company's financial statements for 2019 conform to the requirements of the accounting standards for business enterprises, and truly and completely reflect the company's financial position as of December 31, 2019, as well as the operating results and cash flow of 2019 and other relevant information. In addition, the company's financial statements in all material respects comply with the disclosure requirements of the financial statements and their notes in the *Rules for the Information Disclosure and Report Formulation of Company in Public Issuance of Securities No.15 - General Provisions on Financial Report* revised by the China Securities Regulatory Commission in 2014.

2. Accounting period

The company's accounting period is divided into annual and interim; The fiscal year begins on the first day of January and ends on the thirty-first day of December in the Gregorian calendar. Accounting interim refers to a reporting period shorter than one full accounting year.

3. Business cycle

The operating cycle of each business segment of the company is shorter than one year; The company uses 12 months as its liquidity criterion for assets and liabilities.

4. Recording currency

The company and its domestic subsidiaries shall use RMB as the functional currency; overseas subsidiaries shall take the currency in the main economic environment in which they operate as the functional currency, and the overseas subsidiaries shall prepare the financial statements of the standard currency and the financial statements converted into RMB.

5. Accounting treatment methods of enterprise merger under the same control and non-same control

(1) Enterprise merger under the same control

Company to pay in cash, transfers non-cash assets, issue debt or equity securities as a merger of consideration, shareholders' equity on the combining date according to the combined party on the final control parties share the book value of the consolidated financial statements as the initial cost of the long-term equity investment, long-term equity investment in the initial cost of investment and merger price to book value (or the total par value of issued shares) of the balance, adjust the capital reserves; If the capital reserve is insufficient for write-off, the retained earnings shall be adjusted.

For the long-term equity investment formed by the merger of enterprises under the same control through multiple transactions step by step, distinguish whether it is a "package deal". In a "package deal", the transactions are accounted for as a transaction in which control is acquired. Does not belong to "package", on the combining date according to the shareholders' equity in the final control should enjoy the combined party party the share of the book value of the consolidated financial statements of the as the initial cost of the long-term equity investment, the initial investment cost and achieve long-term equity investment before the merger of a long-term equity investment book value and merge, acquire the shares in the new pay further consideration of the difference between the book value of the sum, adjust the capital reserves; If the capital reserve is insufficient for write-off, the retained earnings shall be adjusted.

(2) Enterprise merger under the non-same control

The company takes the initial investment cost of long-term equity investment at the purchase date according to the merger cost, which includes the sum of assets paid by the buyer, liabilities incurred or assumed, and the fair value of equity securities issued.

For the long-term equity investment formed by the merger of enterprises under different control through multiple transactions, it is necessary to distinguish whether it is a "package deal". In a "package deal", the transactions are accounted for as a transaction in which control is acquired. If it does not belong to the "package transaction", it shall distinguish between individual financial statements and consolidated financial statements for relevant accounting treatment:

In individual financial statements, the initial investment cost of the investment is the sum of the book value of the equity investment held before the purchase date and the new investment cost on the purchase date; If the equity held by the purchaser before the date of purchase involves other comprehensive income, other comprehensive income related to it shall be transferred into the current investment income at the time of disposal of the investment.

In the consolidated financial statements, the equity held before the purchase date is remeasured according to the fair value of the equity on the purchase date, and the difference between the fair value and the book value is recorded in the current investment income. If the equity held by the purchaser before the purchase date involves other comprehensive income, the relevant other comprehensive income shall be transferred into the investment income of the current period on the purchase date.

The company's intermediary fees, such as auditing, legal services, evaluation and consulting, and other related administrative expenses incurred in the merger of enterprises shall be recorded into the current profit and loss when incurred; The transaction cost of

equity securities or debt securities issued by the company as the combined consideration shall be included in the initial recognition amount of equity securities or debt securities.

6. The method of compiling consolidated financial statements

(1) Principles for determining the scope of consolidation

The scope of consolidation of the consolidated financial statements is determined on a control basis. Control means that the company has the power over the investee, enjoys variable returns by participating in the related activities of the investee, and could use the power over the investee to influence the amount of return. The scope of the merger includes the company and all its subsidiaries (subsidiaries are the entities controlled by the company).

(2) Method of compiling consolidated financial statements

The consolidated financial statements are based on the financial statements of the parent company and its subsidiaries and are prepared based on other relevant information.

When preparing consolidated financial statements, if the subsidiary is inconsistent with the accounting policies or accounting periods adopted by the company, necessary adjustments shall be made to the financial statements of the subsidiary in accordance with the accounting policies and accounting periods of the company. For the subsidiaries acquired through the merger of enterprises not under the same control, the financial statements shall be adjusted based on the fair value of identifiable net assets at the date of purchase. For the subsidiaries acquired through the merger of enterprises under the same control, the financial statements shall be adjusted based on the book value of their assets and liabilities in the financial statements of the final controlling party.

The consolidated balance sheet is prepared on the basis of the balance sheets of the parent company and the subsidiaries after offsetting the influence of the parent company on the long-term equity investment project of the subsidiary company and the owner's equity project of the subsidiary company and the internal transactions between the parent company and the subsidiaries and the subsidiaries on the consolidated balance sheet; The consolidated income statement shall be prepared on the basis of the income statement of the parent company and its subsidiaries after offsetting the effect of internal transactions between the parent company and its subsidiaries and subsidiaries on the consolidated income statement. The consolidated cash flow statement is prepared on the basis of the cash flow statement of the parent company and its subsidiaries after offsetting the effect of internal transactions between the parent company and its subsidiaries and subsidiaries on the consolidated cash flow statement; Consolidated statement of changes in owners' equity on the basis of the statement of changes in owners' equity of the parent company and subsidiaries, the offset of a long-term equity investment and the parent company subsidiary to the parent company's share of the subsidiary that enjoys in owners' equity, subsidiary of a long-term equity investment subsidiary company and the subsidiary's share of the subsidiary that enjoys in the owner's equity and the parent company and subsidiary company, subsidiary of internal transactions happened between the impact on the consolidated statement of changes in owners' equity after the establishment. The subsidiary's owner's equity does not belong to the parent company of share and net profits and losses of the current period, other comprehensive income and comprehensive income in the total of minority shareholders' equity share, shall be respectively represented in the consolidated financial statements' "rights and interests of minority shareholders, minority shareholders profit and loss and other comprehensive income attributable to the minority shareholders and the total amount of comprehensive income attributable to the minority shareholders" project list; If the loss of the subsidiary shared by the minority shareholders exceeds the share of the minority shareholders in the initial shareholders' equity of the subsidiary, and the equity of minority shareholders shall still be written down.

For subsidiaries disposed of, the operating results and cash flow before the disposal date have been properly included in the consolidated income statement and consolidated cash flow statement; Subsidiaries disposed of in the current period do not adjust the beginning of the consolidated balance sheet. The operating results and cash flows after the purchase of a subsidiary which is not increased by the merger of an enterprise under the same control have been properly included in the consolidated income statement and consolidated cash flow statement, and the beginning and comparative figures of the consolidated financial statements have not been adjusted. The operating results and cash flow of a subsidiary (or the merged party) increased by the merger of an enterprise

under the same control from the beginning of the current period to the date of merger have been properly included in the consolidated income statement and consolidated cash flow statement, and the beginning and comparison Numbers of the consolidated financial statements have been adjusted at the same time.

When preparing the consolidated financial statements, the difference between the long-term equity investment newly increased due to the purchase of minority equity and the continuously calculated net asset share of the subsidiary from the purchase date (or merger date) calculated according to the newly increased shareholding ratio shall be entitled to, and the capital reserve shall be adjusted. If the capital reserve is insufficient to be written down, the retained earnings shall be adjusted.

When the control right of the original subsidiary is lost due to the disposal of part of the equity investment or other reasons, the remaining equity is remeasured according to its fair value on the day of loss of control when preparing the consolidated financial statements. The sum of the consideration obtained from the disposal of the equity and the fair value of the remaining equity, minus the share of the original subsidiary's net assets which shall be continuously calculated from the purchase date according to the original shareholding ratio, shall be included in the investment income of the current period when the control right is lost. Equity related to the original unit of other comprehensive income, in the loss of control power using the same as the acquiree direct disposal of related assets and liabilities on the basis of accounting, which in addition to the original unit to measure set benefit plan net debt or equity lead to changes in the outside, along with the rest into the current investment income. Subsequently, the remaining equity of this part is further measured in accordance with the provisions of accounting standards related to long-term equity investment or financial instruments, as described in "Note V, (10) financial instruments" or "Note V, (13) long-term equity investment".

If the company handles the equity investment of the subsidiary company step by step through multiple transactions until it loses control right, it shall distinguish whether each transaction is a package transaction. The terms, conditions and economic implications of the disposal of various transactions relating to the equity investments of the subsidiary are consistent with one or more of the following, which generally indicate that multiple transactions should be accounted for as a package transaction: ① These transactions were entered into at the same time or with mutual influence in mind; ② These transactions as a whole can result in a complete commercial outcome; ③ The occurrence of a transaction depends on the occurrence of at least one other transaction; ④ A transaction is not economic in its own right, but it is economic when considered together with other transactions. For those not belong to the package deal, each of them a deal circumstances respectively in accordance with the "loss of control over part of the disposal of subsidiary company under the condition of long-term equity investment" (see the "note" five, (13) of the long-term equity investment) and the front "for disposal part of equity investment or other reasons lost control of the original unit" relevant provisions of the accounting treatment. If the transactions in which the subsidiary company's equity investment is disposed up to the loss of control belong to a package transaction, the transactions shall be treated as a transaction in which the subsidiary company is disposed and the control right is lost; Before the loss of control, the difference between the disposal price and the disposal investment corresponding to the net asset share of the subsidiary shall be recognized as other comprehensive income in the consolidated financial statements, and shall be transferred to the profit and loss of the current period when the control right is lost.

7. Classification of joint venture arrangement and accounting treatment of joint operation

A joint venture arrangement means an arrangement jointly controlled by two or more parties. According to the rights and obligations the company enjoys in the joint venture arrangement, the joint venture arrangement is divided into joint operation and joint venture. Joint operation refers to the joint venture arrangement in which the company enjoys the assets related to the arrangement and assumes the liabilities related to the arrangement. A joint venture means a joint venture arrangement in which the company has rights only over the net assets of the arrangement.

As a joint venture party, the company shall confirm the assets held separately and the liabilities assumed separately by the company, as well as the assets held jointly and the liabilities assumed jointly by the company according to its share; The revenue generated from the sale of products in the joint operation shall be recognized in accordance with the company's share; Confirm the expenses incurred by the company alone and the expenses incurred in joint operation according to the company's share.

The company adopts the equity method to calculate the investment of joint venture and conducts accounting treatment in accordance with "Note V, (13) long-term equity investment".

8. Standard for determining cash and cash equivalents

The company's cash and cash equivalents include cash on hand, deposits that can be used to pay at any time, and investments held by the company for a short term (generally maturing within three months from the date of purchase), which are highly liquid, easily converted into cash with little risk of value change, etc.

9. Conversion of foreign currency business and foreign currency statements

(1) Foreign currency business

The company shall use the spot exchange rate when the business takes place to convert the foreign currency business into the currency, but the foreign currency exchange business or transactions involving foreign currency exchange shall be converted into the amount of the functional currency according to the actual exchange rate.

For the balance sheet date, the foreign currency monetary items using the spot exchange rate on the balance sheet date (specifically refers to the balance sheet date the central parity of RMB exchange rate published by the People's Bank of China, hereinafter the same) to convert the resulting exchange balance, generally included in the current profits and losses, but except for the following 3 kinds of situations: ① The exchange balance produced by the special foreign currency borrowing related to assets complying capitalization construction shall be processed in accordance with the principle of the capitalization of the borrowing costs; ② The exchange difference of the hedging instrument used for effective hedging of net investment in overseas operations shall be recorded into other comprehensive income and shall not be recognized as current profit or loss until the net investment is disposed of; ③ In addition to the amortized cost of the foreign currency monetary items available for sale, the exchange difference generated by the changes in other book balances shall be recorded in other comprehensive income.

For foreign currency non-monetary items measured at historical cost, the amount of the functional currency converted at the spot exchange rate at the time of transaction shall still be measured. The foreign currency non-monetary items measured at fair value shall be converted at the spot exchange rate on the date when the fair value is determined, and the difference shall be recorded into the current profit and loss or other comprehensive income.

(2) Conversion of foreign currency financial statements

For the compilation of consolidated financial statements involves overseas operations, if there are any foreign currency monetary items that substantially constitute net investment in overseas operations, the exchange difference caused by the exchange rate fluctuations shall be recognized as the "translation difference of foreign currency statements" as other comprehensive income; When disposing of overseas business, it shall be included in the current profit and loss of disposal.

The conversion method of foreign currency financial statements for overseas operations is as follows:

① The asset and liability items in the balance sheet shall be converted at the spot exchange rate on the balance sheet date; Except for "undistributed profit", other items of owners' equity shall be converted by the spot exchange rate at the time of occurrence. The balance of the combined amount of assets, liabilities and owners' equity items after translation shall be recognized as other comprehensive income as the translation difference in foreign currency statements. In case of disposal of overseas business and loss of control, the balance of foreign currency statements related to the overseas business as shown in other comprehensive income items in the balance sheet shall be converted into the current profit and loss of the disposal in full or in accordance with the proportion of the disposal of the overseas business.

② The items of income statement, cost and expenses shall be converted by the approximate exchange rate of spot exchange rate at the time of transaction.

③ Items reflecting the amount in the cash flow statement are converted by the approximate exchange rate of the spot exchange

rate at the time of transaction. The impact of exchange rate fluctuations on cash is separately listed in the cash flow statement.

10. Financial instruments

A financial instrument is an instrument that forms the financial assets of one party and the financial liabilities or interests of the other party.

(1) Classification of financial instruments

Financial instruments include financial assets and financial liabilities. Specific items include monetary funds, equity investments other than long-term equity investments, receivables, payables, loans, bonds payable and equity, etc.

(2) Confirmation and initial measurement of financial assets and liabilities

Financial assets and financial liabilities are recognized in the balance sheet when the company becomes a party to the terms of the contract for the relevant financial instrument.

Financial assets and financial liabilities are measured at fair value at the initial recognition, except for accounts receivable without significant financing components. For financial assets or financial liabilities measured at fair value and whose changes are recorded into the current profit and loss, the relevant transaction costs are directly recorded into the current profit and loss; For other classes of financial assets or financial liabilities, related transaction fees are included in the initial recognition amount. For accounts receivable without significant financing elements, the company shall initially measure the transaction price as determined by the accounting policy of note V (25).

(3) Classification and subsequent measurement of financial assets

① Classification of financial assets

The company usually according to the management of the business model of financial assets and financial assets, the contractual cash flow characteristics of the initial recognition of financial assets can be divided into different categories: financial assets measured at the amortized cost, measured at fair value and the changes are included in the financial assets of other comprehensive income and measured at fair value and the changes are recorded into the profits and losses of the current financial assets.

Unless the company changes its business model for managing financial assets, in which case all relevant financial assets affected are reclassified on the first day of the first reporting period following a change in the business model, financial assets shall not be reclassified after initial confirmation.

The company classifies the financial assets that meet the following conditions and are not designated to be measured at fair value and whose changes are recorded in the current profit and loss as financial assets measured at amortized cost:

A. The company's business model for managing the financial assets is to collect the contract cash flow;

B. The terms of the contract for the financial asset stipulate that the cash flow generated at a particular date is only the payment of the principal and interest on the outstanding principal amount.

The company classifies the financial assets that meet the following conditions and are not designated to be measured at fair value and whose changes are recorded into the current profit and loss as financial assets measured at fair value and whose changes are recorded into other comprehensive income:

A. The company's business model of managing the financial asset aims at both receiving the contract cash flow and selling the financial asset;

B. The terms of the contract for the financial asset stipulate that the cash flow generated at a particular date is only the payment of the principal and interest on the outstanding principal amount.

For investment in non-trading equity instruments, the company may irrevocably designate it at the initial recognition as a financial asset measured at fair value and whose changes are included in other comprehensive income. The designation is made on the basis of a single investment and the associated investment conforms to the definition of an equity instrument from the issuer's

point of view.

Apart from the financial assets measured at amortized cost and at fair value and whose changes are recorded into other comprehensive income, the company classifies all other financial assets as financial assets measured at fair value and whose changes are recorded into current profits and losses. In the initial recognition, if the accounting mismatches can be eliminated or significantly reduced, the company can irrevocably designate the financial assets that should be measured at amortized cost or at fair value and whose changes are recorded in other comprehensive income as financial assets that are measured at fair value and whose changes are recorded in current profits and losses.

The business model of managing financial assets refers to how the company manages financial assets to generate cash flow. The business model determines whether the cash flow of the company's financial assets under management comes from the collection of contract cash flow, the sale of financial assets, or both. The company determines the business model for the management of financial assets based on objective facts and specific business objectives for the management of financial assets determined by key managers.

The company assesses the contractual cash flow characteristics of financial assets to determine whether the contractual cash flow generated by the relevant financial assets on a specific date is solely the payment of principal and interest based on the outstanding principal amount. Among them, the principal refers to the fair value of financial assets when they are initially recognized. Interest includes consideration for the time value of the currency, the credit risk associated with the amount of principal outstanding for a specific period, and other fundamental borrowing risks, costs, and profits. In addition, the company evaluates the terms of the contract that may cause a change in the timing or amount of the cash flow of the financial asset contract to determine whether they meet the requirements for the cash flow characteristics of the contract.

② Subsequent measurement of financial assets

A. Financial assets that are measured at fair value and whose changes are recorded into current profits and losses

After the initial recognition, such financial assets are subsequently measured at fair value, and the gains or losses (including interest and dividend income) generated are recorded into the current profit and loss, unless the financial assets are part of the hedging relationship.

B. Financial assets measured at amortized cost

After the initial confirmation, the real interest rate method is adopted to measure the amortized cost of such financial assets. The gains or losses arising from the financial assets measured at the amortized cost and not part of any hedging relationship shall be booked into the current profit and loss when the recognition is terminated, amortized in accordance with the actual interest rate method or the impairment is recognized.

C. Debt investment measured at fair value and its changes included in other comprehensive income

After the initial confirmation, the fair value of such financial assets is subsequently measured. The interest, impairment loss or profit and exchange profit and loss calculated by the effective interest rate method are recorded into the current profit and loss, while other gains and losses are recorded into other comprehensive income. Upon termination of recognition, the accumulated gains or losses previously included in other comprehensive income shall be transferred out of other comprehensive income and recorded into the current profit and loss.

D. Equity instrument investment that is measured at fair value and whose changes are included in other comprehensive income

After the initial confirmation, the fair value of such financial assets is subsequently measured. Dividend income is booked into profit and loss, other gains or losses are booked into other comprehensive income. Upon termination of recognition, the accumulated gains or losses previously recorded in other comprehensive income shall be transferred out of other comprehensive income and recorded in retained earnings.

(4) Classification and subsequent measurement of financial liabilities

The company classifies financial liabilities as financial liabilities measured at fair value and whose changes are included in current profits and losses and financial liabilities measured at amortized cost.

① Financial liabilities that are measured at fair value and whose changes are booked into current profits and losses

Such financial liabilities include trading financial liabilities (including derivatives belonging to financial liabilities) and financial liabilities that are specified to be measured at fair value and whose changes are recorded into current profits and losses.

After the initial recognition, such financial liabilities are subsequently measured at fair value, and the profits or losses (including interest expenses) incurred are recorded into the current profit and loss except those related to hedge accounting.

② Financial liabilities measured at amortized cost

After the initial confirmation, this kind of financial liability is measured by the amortized cost using the effective interest rate method.

(5) Offset

Financial assets and financial liabilities are shown separately in the balance sheet and are not offset against each other. However, the net amount after offsetting shall be shown in the balance sheet if the following conditions are met:

- ① The company has the legal right to set off the confirmed amount, and such legal right is currently enforceable
- ② The company plans to settle on a net amount or to liquidate the financial asset and pay up the financial liability at the same time.

(6) Termination recognition of financial assets and financial liabilities

The company terminates the recognition of the financial asset if one of the following conditions is met:

- ① The termination of the contractual right to receive the cash flow of the financial asset;
- ② The financial asset has been transferred, and the company transferred almost all the risks and rewards of the ownership of the financial asset to the transferee;
- ③ The financial asset has been transferred, although the company has neither transferred nor retained almost all the risks and rewards in the ownership of the financial asset, it has not retained control over the financial asset.

If the financial asset transfer meets the conditions for termination recognition, the company shall record the difference between the following two amounts into the current profit and loss:

- ① The book value of the transferred financial assets at the date of termination;
- ② The sum of the consideration received as a result of the transfer of financial assets and the amount (involving the transfer of financial assets to the fair value measurement and its changes into other comprehensive income of the debt investment) corresponding to the part of the termination recognition in the accumulative amount of the fair value change directly included in other comprehensive income.

Where the current obligations of a financial liability (or part thereof) have been discharged, the company ceases to recognize the financial liability (or part thereof)

(7) Impairment

Based on expected credit loss, the company conducts impairment accounting treatment for the following items and confirms loss provision:

- A. Financial assets measured at amortized cost;
- B. Debt investment measured at fair value and its changes included in other comprehensive income;
- C. Leasing receivables

The company held by the other in the fair value measurement of financial assets is not applicable to forecast credit loss model, including the fair value and whose fluctuations are included in the current profits and losses of the creditor's rights investment or equity instruments, designated as at fair value and whose fluctuations are included in other comprehensive income of the equity instrument investments, as well as the derivative financial assets.

① **Measurement of expected credit loss**

Expected credit loss refers to the weighted average credit loss of financial instruments weighted by the risk of default. Credit loss refers to the difference between all contract cash flows receivable under the contract and all cash flows expected to be collected by the company discounted at the original effective interest rate, that is, the present value of all cash shortfalls.

When measuring expected credit loss, the maximum term to be considered by the company is the maximum contract term for which the enterprise is exposed to credit risk (including consideration of renewal option).

The expected credit loss of the entire duration refers to the expected credit loss caused by all possible default events in the expected duration of the financial instrument.

The expected credit loss in the next 12 months refers to the expected credit loss caused by the default event of the financial instrument that may occur within 12 months after the balance sheet date (if the expected duration of the financial instrument is less than 12 months, it is the expected duration) and is a part of the expected credit loss in the entire duration.

For accounts receivable and long-term receivables resulting from transactions regulated by *Accounting Standards for Business Enterprises No. 14 - Income*, the group always measures its loss provision at an amount equal to the expected credit loss over the entire duration. The group calculates the expected credit losses of the afore-mentioned financial assets based on its historical credit loss experience, which is adjusted based on the borrower's specific factors at the balance sheet date and the assessment of the current and future economic conditions forecast.

Except by the account receivable and long-term receivables formed the trade specified in *Accounting Standards for Business Enterprises No. 14 - Income*, for the financial instruments to meet one of the following situations, the group measured their losses according to the equal to the sum of the expected over the next 12 months credit losses. For other financial instruments, the loss preparations shall be measured in accordance with the equal to the sum of the expected credit losses throughout the duration:

- A. The financial instrument has only a low credit risk at the balance sheet date;
- B. The credit risk of the financial instrument has not increased significantly since the initial confirmation.

Low credit risk

If the financial tools, the lower the risk of default in the borrowers in the short term to fulfill its obligations of the contractual cash flow ability is very strong, and even the economic situation and business environment in a long term adverse change but not necessarily must reduce the borrower's ability to fulfill its obligations to the contractual cash flow, the financial instruments been seen as a lower credit risk.

Credit risk increased significantly

The group compares the default risk of the financial instrument on the balance sheet date with the default risk on the initial confirmation date to determine the relative change of the default risk of the financial instrument during its expected duration and to assess whether the credit risk of the financial instrument has significantly increased since the initial confirmation date.

In determining whether credit risk has increased significantly since the initial recognition, the group considers reasonable and evidence-based information, including forward-looking information, which can be obtained without unnecessary additional cost or effort. Information considered by the group includes:

- A. The debtor fails to pay the principal and interest on the due date of the contract;
- B. A serious deterioration, if any, of the external or internal credit ratings of existing or anticipated financial instruments;
- C. A serious deterioration of the debtor's operating results that has occurred or is expected;
- D. Existing or anticipated changes in the technical, market, economic or legal environment which will have a material adverse effect on the debtor's ability to repay the group.

Depending on the nature of the financial instruments, the group assesses whether the credit risk has increased significantly based on a single financial instrument or a portfolio of financial instruments. When evaluating financial instruments based on their portfolios, the group may classify financial instruments based on their common credit risk characteristics.

The group considers that financial assets are in default if the borrower is unlikely to pay the full amount owed to the group and this assessment does not consider the group's recourse actions such as liquidating collateral (if held).

Financial assets for which credit impairment has occurred

On the balance sheet date, the group evaluates whether the financial assets measured at amortized cost and the debt investments measured at fair value and whose changes are included in other comprehensive income have suffered credit impairment. When one or more events occur that adversely affect the expected future cash flow of a financial asset, the financial asset becomes a

financial asset with credit impairment. Evidence of credit impairment of financial assets includes the following observable information:

- A. The issuer or debtor has major financial difficulties;
- B. The debtor breaches the contract, such as default or overdue payment of interest or principal;
- C. For economic or contractual reasons related to the financial difficulties of the debtor, the group gives the debtor concessions which the debtor would not have made under any other circumstances;
- D. The debtor is likely to go bankrupt or undergo other financial restructuring;
- E. The financial difficulties of the issuer or debtor result in the disappearance of an active market for the financial asset.

②A presentation of anticipated credit losses

In order to reflect the changes in the credit risk of financial instruments since the initial recognition, the group re-measures the expected credit loss on each balance sheet date, and the resulting increase in the loss provision or the amount to be carried back is booked into the current profit and loss as an impairment loss or gain. For financial assets measured at amortized cost, the loss provision shall be used to offset the book value of the financial assets listed in the balance sheet; For debt investments measured at fair value and whose changes are included in other comprehensive income, the group confirms its loss provision in other comprehensive income and does not deduct the book value of the financial asset.

③ Write-off

If the group no longer reasonably expects to recover all or part of the financial asset contract cash flow, it will directly write down the book balance of the financial asset. Such writedowns constitute the termination of the recognition of the relevant financial assets. This usually occurs when the group determines that the debtor has no assets or source of income to generate sufficient cash flow to repay the amount to be written down. However, the writedowns of financial assets may still be affected by the group's execution activities related to the collection of payments due.

If a written down financial asset is recovered later, it shall be carried back as an impairment loss and recorded in the profit or loss of the current period.

(8) Equity instruments

The consideration received by the company for issuing equity instruments shall be credited to shareholders' equity after deducting transaction costs. Repurchase of consideration and transaction fees paid by the company's equity instruments to reduce shareholders' equity.

When repurchasing the company's shares, the repurchased shares shall be managed as inventory shares, and all expenditures of the repurchased shares shall be converted into inventory share costs, which shall be recorded for future reference. The inventory stock does not participate in the profit distribution and is listed in the balance sheet as the allowance for shareholders' equity.

When the inventory stock is cancelled, the share capital shall be reduced according to the total face value of the stock to be cancelled, and the portion of the inventory stock cost exceeding the total face value shall be successively offset by the capital reserve (capital premium), the surplus reserve and the undistributed profit; Where the stock cost is less than the total face value, the part of the stock below the total face value increases the capital reserve (capital stock premium).

In the case of inventory stock transfer, the portion of the transfer income higher than the cost of inventory stock transfer will increase the capital reserve (capital stock premium). The part less than the cost of inventory stock, in turn, offset the capital reserve (equity premium), surplus reserve, undistributed profit.

An equity instrument is a contract that proves that the company owns the remaining equity in the assets of an enterprise after deducting all liabilities. In an enterprise merger, transaction costs incurred by the merging party in issuing equity instruments shall be deducted from premium income of equity instruments. For other equity instruments, the consideration received at the time of issue, less transaction costs, increases shareholders' equity.

The company's various distributions to the holders of equity instruments (excluding stock dividends) reduce shareholders' equity. The company does not recognize changes in the fair value of equity instruments.

11. Inventory

Companies are required to comply with the disclosure requirements of *Shenzhen Stock Exchange Industry Information Disclosure Guidelines No. 1-Listed Companies Engaged in Livestock and Poultry and Aquaculture Related Business*.

(1) Inventory classification

Inventory is divided into raw materials, packaging materials, in-process products, inventory goods, low-value consumables, commodities issued, entrusted materials for processing, expendable biological assets, turnover materials.

(2) Valuation method of issued inventory

Inventories are carried forward on a monthly basis using the weighted average method

(3) Basis for determining the net realizable value of inventory and the method for calculating and provision for the inventory depreciation reserve

At the end of the period, when the inventory cost is lower than the net realizable value, the inventory is measured at the cost. When the inventory cost is higher than the net realizable value, the inventory is measured as the net realizable value, and at the same time, the inventory depreciation reserve is calculated according to the difference between the cost and net realizable value and recorded into the current profit and loss. Net realizable value refers to the amount of the estimated selling price of the inventory less the estimated cost to be incurred when the inventory is completed, the estimated selling cost and the related taxes.

For inventories with large quantity and low unit price, provision shall be made according to the inventory category; Inventory associated with a product line of similar purpose or end use that is manufactured and sold in the same area and that is difficult to value as distinct from other items in the product line is consolidated; Other provisions are made on the basis of the difference between the cost of a single inventory item and its net realizable value.

(4) Inventory stock-taking system

Carry out perpetual inventory stock-taking system for inventory

(5) Amortization method of low value consumables and packaging

The use of low value consumables and packaging goods adopts one-off amortization method. The average amortization method is used to amortize the turnover materials with large amount and long service life.

12. Hold assets for sale

When the company recovers the book value of a non-liquid asset or disposal group primarily through the sale rather than the continued use of such non-liquid asset or disposal group, the non-liquid asset or disposal group is classified into holding for sale.

A disposal group is a group of assets disposed of in a transaction by sale or otherwise and the liabilities directly related to those assets transferred in the transaction.

The company classifies non-liquid assets or disposal groups into holding for sale, if they meet all the following criteria:

(1) The non-liquid asset or disposal group is immediately available for sale in its current condition in accordance with the practice of selling such assets or disposal group in similar transactions;

(2) A sale is likely to occur, i.e. the company has resolved on a sale plan and entered into a legally binding purchase agreement with other parties, and the sale is expected to be completed within one year;

The company according to the book value and the fair value minus the net after selling expenses of residency is to hold non-liquid assets for sale (not including financial assets and deferred income tax assets and the fair value model for subsequent measurement of investment property) or to the disposition of the group to carry on the initial measurement and subsequent measurement, book value is higher than the fair value minus the difference between the net after selling expenses shall be recognized as asset impairment losses, included in the current profits and losses.

13. Long-term equity investment

Long-term equity investment refers to equity investment that has control, joint control or significant influence on the investee, including investment in subsidiaries, joint ventures and joint ventures. The company's equity investment that is not controlled, jointly controlled or has a significant impact on the invested entity can be used as a financial asset accounting that can be sold or measured at fair value and whose changes are recorded into the current profit and loss. The accounting policy is detailed in "Note V (10) financial instruments".

(1) Judgment criteria for common control and significant impact

Common control refers to the common control over an arrangement in accordance with the relevant agreement, and the relevant activities of the arrangement must be agreed upon by the participants sharing the control rights before the decision can be made. Where the company and other parties jointly exercise joint control over the investee and enjoy rights over the net assets of the investee, the investee shall be a joint venture of the company.

Significant influence refers to the right to participate in the financial and operational decisions of an enterprise, but not to control or jointly control the formulation of these policies with other parties. Where the company can exert significant influence on the investee, the investee shall be a joint venture of the company. When the company directly or indirectly holds more than 20% but less than 50% of the voting shares of the invested entity through its subsidiaries, it is generally considered to have a significant impact. Unless there is conclusive evidence that the company cannot participate in the production and operation decisions of the invested entity, it will not have a significant impact. The company holds less than 20% of the voting shares of the invested entity, but in the event of one or more of the following circumstances, the company will make a judgment on whether there is a material impact by considering all the facts and circumstances:

- ① To send someone to be represented on the board of directors of the invested entity or in a similar authority;
- ② Participate in the financial and business policy making process of the invested entity;
- ③ There is an important transaction between the company and the investee;
- ④ Dispatch management personnel to the invested entity;
- ⑤ To provide the invested units with key technical data.

(2) Determination of initial investment cost

① Long-term equity investment resulting from a merger

For the method of determining the initial cost of long-term equity investment formed by enterprise merger, please refer to "Note V, (5) accounting treatment method of enterprise merger under the same control and non-same control".

② Long-term equity investment made by means other than a merger

For the long-term equity investment obtained by the company by paying cash, the initial investment cost shall be the purchase price actually paid. Initial investment costs include fees, taxes and other necessary expenses directly related to the acquisition of a long-term equity investment.

The long-term equity investment obtained by issuing equity securities shall be based on the fair value of the equity securities issued as the initial investment cost.

Non-monetary assets transaction with commercial nature and the fair value of the assets received or surrendered can be reliably measured, under the premise of non-monetary assets in exchange of a long-term equity investment in the fair value of the assets surrendered shall pay the relevant taxes and determine its initial investment cost, unless there is convincing evidence that the fair value of the assets received is more reliable. For the non-monetary asset exchange that does not meet the above requirements, the book value of the asset and the relevant taxes payable shall be taken as the initial investment cost of the long-term equity investment.

The initial investment cost of long-term equity investment obtained through debt restructuring is determined based on fair value.

(3) Subsequent measurement and profit and loss recognition method

Adopt cost method to calculate the long-term equity investment controlled by the invested entity; The equity method is used to calculate the long-term equity investment of joint venture and joint venture.

① Long-term equity investments calculated by cost method

When the cost method is adopted, the long-term equity investment is calculated at the initial investment cost, and the cost of the long-term equity investment is adjusted by adding or recovering the investment. Except for the declared but not yet paid cash dividend or profit included in the consideration at the time of the investment, the company shall recognize the current investment income in accordance with the cash dividend or profit declared by the invested entity.

② Long-term equity investments calculated by equity method

When the equity method is adopted, if the investment cost of long-term equity investment is greater than the fair value share of identifiable net assets of the invested entity, the investment cost of long-term equity investment shall not be adjusted; If the investment cost of long-term equity investment is less than the fair value share of the identifiable net assets of the invested entity, the difference shall be recorded in the current non-operating income, and the cost of long-term equity investment shall be adjusted.

During the holding period of the long-term equity investment under the accounting of equity method, the company shall recognize the investment income and other comprehensive income respectively according to the share of the net profit and loss and other comprehensive income realized by the invested entity that the company shall enjoy or share, and meanwhile adjust the book value of the long-term equity investment. The book value of the long-term equity investment shall be reduced correspondingly in accordance with the profit or cash dividend declared and distributed by the invested entity; For other changes in owners' equity other than the net profit and loss of the invested entity, other comprehensive income and profit distribution, the book value of long-term equity investment shall be adjusted and included in the capital reserve.

When recognizing the share of the net profit and loss of the invested entity, it shall be recognized after adjusting the net profit of the invested entity on the basis of the fair value of the identifiable net assets of the invested entity at the time of the investment; If the accounting policies and accounting periods adopted by the invested entity are inconsistent with those of the company, the financial statements of the invested entity shall be adjusted according to the accounting policies and accounting periods of the company, and the investment income and other comprehensive income shall be confirmed. The foregoing adjustments to the financial statements of the invested entity shall follow the important principle. For this company (including subsidiaries) and the transactions between affiliated enterprises, joint ventures, cast or sell assets does not constitute a business, the unrealized insider trading profit and loss calculated according to the proportion has belonged to our company's part shall be offset, on the basis of recognition of profit and loss, but in our company and unrealized insider trading losses of the invested enterprise, belong to the transfer of asset impairment losses, not be offset.

When recognizing the investee's net loss that should be shared, the limit shall be to write down to zero the book value of the long-term equity investment and other long-term interests that substantially constitute the net investment to the investee. In addition, if the company has the obligation to bear additional losses to the investee, it shall recognize the estimated liabilities according to the expected obligations and record the investment loss in the current period. If the investee company achieves net profit in the subsequent period, the company shall restore the recognition of the profit-sharing amount after the profit-sharing amount has made up the unrecognized loss sharing amount.

The company by reason of additional investments to be able to have significant influences on an invested entity do joint control or does not constitute a control, in accordance with the *Accounting Standards for Enterprises No. 22 - Recognition and Measurement of Financial Instruments* identified the original held the sum of the fair value of the equity investment and new investment cost, as the change according to the initial cost of the equity method accounting. Where the equity investment previously held is classified as a financial asset that can be sold, the difference between its fair value and book value, and the change in the accumulated fair value originally included in other comprehensive income shall be transferred to the current profit and loss calculated according to the equity method.

(4) Long-term investment impairment test method and impairment provision calculation and withdrawal method

On the balance sheet date, the company judges whether there are any signs of impairment in the long-term equity investment.

If there are signs of impairment, the impairment test shall be conducted according to the single long-term investment. If the impairment test results show that the recoverable amount of long-term equity investment is lower than its carrying value, the impairment provision shall be calculated and recorded as impairment loss according to the difference.

(5) Disposal of long-term equity investments

In the consolidated financial statements, the company partially disposed of the long-term equity investment in the subsidiary without losing the control right, and the difference between the disposal price and the long-term equity investment entitled to the subsidiary's net assets shall be included in the shareholders' equity; If the company partially disposed of the long-term equity investment in the subsidiary company, resulting in the loss of the control right of the subsidiary company, it shall be handled in accordance with the relevant accounting policies of "Note III. (6) method of preparing consolidated financial statements".

In other cases, the difference between the book value of the long-term equity investment disposal and the actual acquisition price shall be recorded into the current profit and loss.

If the long-term equity investment is accounted by the equity method, and the remaining equity after disposal is still accounted by the equity method, the other comprehensive income that is accounted into the shareholders' equity shall be accounted on the same basis as the assets or liabilities directly disposed by the invested entity in the corresponding proportion. Owners' equity recognized as a result of changes in owners' equity other than the net profit and loss of the investee, other comprehensive income and profit distribution shall be transferred to the current profit and loss in proportion.

For a long-term equity investment measured by employing the cost method, the remaining equity after the disposal still adopts cost accounting method, confirmation of other comprehensive income is made before its control on the invested entity by using the equity method accounting or financial instruments accounting recognition and measurement criteria, it shall use same the basis of accounting with the disposal of related assets and liabilities directly made by the invested entity, the, and carry forward the profits and losses of the current period in proportion. All other owners' equities than net profit and loss, other comprehensive income and profit distribution in the net asset of the invested unit recognized by the method of equity accounting shall be carried forward to the current profit and loss in proportion.

Because the company has lost control of the invested entity for disposal of investment, the preparation of individual financial statements, the disposal of the remaining shares to the invested entity do joint control or significant influences, to change according to the equity method accounting, and the remaining shares shall be regarded as must pick up adjust measured by employing the equity method, namely; If the remaining equity after disposal cannot exercise joint control or exert significant influence on the invested entity, it shall be treated in accordance with the relevant provisions of financial instrument recognition and measurement standards, and the difference between its fair value and book value on the day of loss of control shall be recorded into the current profit and loss. For the company to achieve control of the invested entity, by using the equity method accounting or financial instruments accounting recognition and measurement criteria and confirmation of other comprehensive income, in loss of control over the invested entity when using directly the disposal of related assets and liabilities to the invested entity on the basis of the same accounting treatment, confirmed by using the equity method accounting of the invested entity in the net assets away all the profit and loss and other comprehensive income and profit distribution of the owner's equity other than changes in the loss of control over the invested entity "into the profits and losses of the current period. Where the remaining equity after disposal is accounted for by the equity method, other comprehensive income and other owners' equity are carried forward in proportion; If the remaining equity after disposal is converted into accounting treatment according to financial instrument recognition and measurement standards, all other comprehensive income and other owners' equity are carried forward.

If the company loses the common control or there is significant influence on the invested entity due to the disposal of part of the equity investment, the remaining equity after disposal is calculated according to the financial instrument recognition and measurement standards, and the difference between the fair value and book value on the day when the company loses the common control or significant influence is recorded into the current profit and loss. The original equity investment by using the equity method accounting confirmation of other comprehensive income, in the end when measured by employing the equity method, the invested entity is used to direct the disposal of related assets and liabilities on the basis of the same accounting treatment, by investors away

all the profit and loss and other comprehensive income and profit distribution of the changes in owners' equity, other than to confirm the owner of the rights and interests, in the end when all by employing the equity method, be transferred to the current investment income.

14. Investment property

Measurement model of investment property

Cost measurement

Depreciation or amortization method

(1) Classification of investment property

Investment property refers to the real estate that is held for the purpose of earning rent or capital appreciation, or both, including the land use right that has been leased, the land use right that is held and ready to be transferred after appreciation, the building that has been leased, etc.

(2) Measurement of investment property

The initial measurement of the purchased investment property is made according to the cost at the time of acquisition, which includes the purchase price, relevant taxes and fees and the expenditure directly attributable to the asset. The cost of self-built investment property consists of the expenditure necessary to make the investment property reach the intended usable state. Subsequent expenditures related to investment property are included in the cost of investment property if the economic benefits related to the asset are likely to flow in and their cost can be measured reliably. Other subsequent expenses shall be recorded into the current profit and loss when incurred.

The follow-up measurement of investment property is carried out according to the cost model. If it belongs to houses and buildings, depreciation shall be calculated and withdrawn according to the straight line method. In the case of the right to the use of the land, the amortization shall be carried out by the straight-line method within the service life. Asset classification, estimated economic life, annual depreciation (amortization) rate and estimated net salvage rate are as follows:

Category	Estimated economic life	Annual depreciation rate	Estimated net residual value rate
Houses and buildings	40 years	2.38%	5%

When the depreciation of the fixed asset with calculated and withdrawn impairment provision is calculated and withdrawn, the depreciation rate and depreciation amount shall be recalculated and determined according to the book value of the fixed asset and the remaining service life of the fixed assets. In the case of the right to the use of the land, the average amortization shall be carried out by stages during the service life period from the month when the land is available for use to the time when the confirmation of the termination is made, and the amortization shall be recorded into the current profit and loss.

(3) Confirmation standards and accounting method for impairment provision of investment properties

Inspection on investment properties shall be carried out item by item at the end of the period. Based on the ability of each investment property to bring the company future economic benefits, the impairment provision of investment property shall be collected according to the difference between the single recoverable amount of investment property and its book value. Upon confirmation of asset impairment loss, it will not be turned back in the future accounting periods.

When the company changes the use of the investment properties, such as for its own use, the related investment properties shall be transferred to other assets.

15. Fixed assets

(1) Confirmation condition

Fixed assets refer to buildings, machinery equipment, means of transport and other tools and instruments related to operation which have a service life of more than one year and are held by the company to produce goods, provision of labor services and operation and management. When the economic benefits related to the fixed asset are likely to flow into the enterprise and the cost of the fixed asset can be measured reliably, the fixed asset can be confirmed.

(2) Depreciation method

Category	Depreciation method	Depreciation life	Residual value rate	Annual depreciation rate
Houses and buildings	Straight-line Depreciation	20—40 years	5%	2.38%—4.75%
Machinery equipments	Straight-line Depreciation	8—16 years	5%	5.94%—11.88%
Transportation equipments	Straight-line Depreciation	5 years	5%	19.00%
Others	Straight-line Depreciation	3—5 years	5%	19.00%—31.67%

The company shall calculate and withdraw depreciation of all fixed assets, except for those that have been fully reserved for depreciation and are still in use. The company adopts the straight-line method to calculate and withdraw depreciation. The categories of fixed assets, expected service life, expected net residual value rate and annual depreciation rate are shown in the above table.

When the depreciation of the fixed asset with calculated and withdrawn impairment provision is calculated and withdrawn, the depreciation rate and depreciation amount shall be recalculated and determined according to the book value of the fixed asset (that is, the original value of the fixed assets minus the accumulated depreciation and the impairment provision calculated and withdrawn), and the remaining service life of the fixed assets.

(3) Impairment test method and impairment provision accounting method of fixed assets

Inspection on fixed assets shall be carried out item by item at the end of the period. If due to the market price continued to fall, or technological obsolescence, damage, and long-term idle causes its recoverable amount is lower than the book value, the impairment provision of fixed assets shall be collected according to difference between the single recoverable amount of fixed asset and its book value, and recorded into the profits and losses of the current. Upon confirmation of asset impairment loss, it will not be turned back in the future accounting periods. For fixed assets under any of the following circumstances, impairment provision shall be made in full amount:

- ① The fixed asset has been Long-term unused, will not be used in the foreseeable future, and has no transfer value.
- ② Due to technological progress and other reasons, the fixed asset has been unavailable.
- ③ Although the fixed asset can be used, it will produce many unqualified products after being used.
- ④ The fixed asset has been damaged, so that there is no use value and transfer value of it.
- ⑤ Other fixed assets essentially can no longer bring economic benefits to the enterprise.

(4) Identification basis, valuation and depreciation methods of fixed assets leased by financing

When the leased fixed assets substantially transfer all the risks and rewards related to the ownership of assets, the lease of such fixed assets shall be regarded as a financial lease. The cost of the fixed assets in the financial lease shall be recorded as the lower of the original book value of the leased assets and the present value of the minimum lease payment on the beginning date of the lease, and the depreciation policy consistent with the self-owned depreciable assets shall be adopted for the fixed assets in the financial lease.

(5) Other descriptions

If the economic benefits related to the fixed asset are likely to flow in and its cost can be measured reliably, the subsequent expenditures related to the fixed asset shall be included in the cost of the fixed asset and the book value of the replaced part shall be terminated. Other subsequent expenditures other than that are recorded in the current profit and loss when incurred.

The balance of the disposal income of the sale, transfer, scrapping or damage of the fixed assets after deducting its book value and related taxes should be booked into the current profit and loss.

The company determines the service life and estimated net residual value of the fixed assets according to the nature and use of the fixed assets. At the end of the year, the service life, estimated residual value and depreciation method of fixed assets shall be reviewed.

16. Construction in progress

(1) Categories of constructions in progress:

The constructions in progress mainly include self-run project, out-contracting project and equipment installation project. The project cost of the construction in process shall be determined according to the actual expenses incurred. The self-run project shall be measured according to the direct materials, direct wages and direct construction expenses; the out-contracting project shall be measured according to the project price payable; the equipment installation project shall determine the project cost according to the value of the installed equipment, the installation cost, the expenses incurred by engineering test run, etc. The project cost of the construction in process shall also include borrowing costs and exchange gains and losses that should be capitalized.

(2) The standards and time when the constructions in progress are carried forward into fixed assets.

If the fixed assets constructed have reached the predetermined usable state, but the final accounts for completion have not yet been done, they shall be transferred into the fixed assets according to the estimated value of the project budget, construction cost and actual cost of the project from the date of reaching the predetermined usable state, the depreciation shall be calculated and withdrawn from the following month, and adjustment shall be done after the final accounts for completion.

(3) Impairment test method and impairment provision accounting method of constructions in progress:

In case of one or more of the following circumstances, the company shall make provision for the impairment provision of the construction in progress according to the difference between the recoverable amount at the end of the period and the book value of the construction in progress, if the recoverable amount at the end of the period is less than the book value of the construction in progress. Once an asset impairment loss is recognized, it will not be carried back in the subsequent accounting period.

- ① The construction is under long-term suspension of and not expected to restart in the next three years;
- ② The project has been backward whether in the performance or in the technology, and the related economic benefits of the enterprise is very uncertain;
- ③ Other conditions are sufficient to prove that the construction in progress has occurred impairment.

17. Borrowing cost

(1) The confirmation principle of the capitalization of borrowing cost

If the borrowing costs made by the company can be directly attributed to the purchase, construction or production of the assets conforming to the capitalization conditions, they shall be capitalized and included in the costs of the relevant assets; Other borrowing costs shall, when incurred, be recognized as expenses according to the amount incurred and shall be included in the current profit and loss. Assets that meet the capitalization conditions refer to the fixed assets, investment property, inventory and other assets that need a long period of time (more than 1 year) for the purchase, construction or production activities to reach the intended usable or saleable state.

(2) The period of capitalization of borrowing cost

The period of capitalization refers to the period from the point of commencement of capitalization of borrowing cost to the point of cessation of capitalization, excluding the period of suspension of capitalization of borrowing costs. The borrowing cost is capitalized when the following conditions are met:

- ① Asset expenditures have been incurred, including expenditures incurred in the form of payment of cash, transfer of non-cash assets or assumption of interest-bearing liabilities for the purchase, construction or production of assets conforming to capitalization conditions;
- ② Borrowing costs have been incurred;
- ③ The purchase, construction or production activities necessary to bring the assets to the intended usable or saleable state have begun.

When the purchased, constructed or produced assets that meet the capitalization conditions reach the predetermined serviceable or saleable state, the capitalization of borrowing costs shall be stopped.

(3) The period of suspension of capitalization

If the abnormal interruption of the asset purchase and construction to be capitalized is caused by management decisions or other unforeseeable reasons, and the interruption period continuously exceeds 3 months, the capitalization of the borrowing cost shall be suspended and recognized as the current expense until the asset purchase and construction activities resume.

(4) The calculation method of the capitalization amount of borrowing cost.

- ① Where a special loan is borrowed for the purpose of purchase, construction or production of the assets conforming to the capitalization conditions, the amount shall be determined by the actual interest expense incurred in the current period of the special loan, subtracting the interest income obtained from depositing the unused loan funds into the bank or the investment income obtained from the temporary investment.
- ② Where a general loan is occupied for the purchase, construction or production of assets in line with the capitalization conditions, the capitalized interest amount of the general loan shall be calculated and determined according to the weighted average value of the part asset expenditure of the cumulative asset expenditure over the special loan, multiplying by general loan capitalization rate. The capitalization rate is calculated based on the weighted average interest rate of general loan.

During the period of capitalization, the capitalized amount of interest in each accounting period shall not exceed the amount of interest actually incurred on the relevant loan in the current period.

18. Biological assets

The productive biological assets refer to biological assets held for the purpose of producing agricultural products, including immature productive biological assets and mature productive biological assets.

Productive biological assets are initially measured at cost:

- (1) The costs of outsourcing productive biological assets include the purchase price, related taxes, transportation fees, insurance fees and other expenditures directly attributable to the purchase of the assets.
- (2) The livestock production costs of self-reproduction include feed costs, labor costs, apportion indirect costs incurred before and the other necessary expenses before reaching the predetermined production and operation purposes (coming of age).
- (3) The cost of the investor's investment in biological assets shall be determined in accordance with the value agreed in the investment contract or agreement, except where the value agreed in the contract or agreement is not fair.

The follow-up measurement of the productive biological asset: For the productive biological asset that has reached the expected objective of production and operation (i.e., mature productive biological assets), its service life shall be determined according to the properties, usage and expectations about the economic interests of the implementation, the expected net salvage value shall be calculated and depreciated according to the straight-line method or units-of-production method, and the relevant asset costs or the profits and losses of the current period shall be included respectively according to utility. The service life and estimated net residual value of the company's mature productive biological assets are as follows:

Category	Expected service life (production capacity)	Expected net salvage value
Breeding sow	36 months	500-1400 Yuan per one
Breeding boar	18 months	500-1400 Yuan per one
Breeding chicken	155/90 (moulting)	25 Yuan per one
Breeding duck	245 /120 (moulting)	30 Yuan per one

The company shall carry out check of the productive biological assets at the end of each year. If there is documented evidence shows a productive biological asset's recoverable amount is lower than its book value, the company shall make provision for the impairment provision of the productive biological asset according to the difference between the recoverable amount at the end of the period and the book value and include it in the current profits and losses. Once the impairment provision of the productive biological asset is accounted and included, it will not be carried back within the duration of the asset.

19. Intangible assets

(1) Valuation method, service life, impairment test

Intangible assets refer to identifiable non-monetary assets without physical form owned or controlled by a company.

① Valuation method of intangible assets

The intangible assets are initially measured according to the actual cost, that is, all the expenses incurred in obtaining the intangible assets and making them achieve the intended purpose are taken as the cost of the intangible assets.

A. The cost of purchasing an intangible asset, including the purchase price, related taxes and fees, and other expenses directly attributed to the intended use of the asset;

B. The self-developed intangible assets and the expenditure in the research stage of the internal research and development project shall be recorded into the profits and losses of the current period when they occur; the expenditure in the development stage of the internal research and development project shall be recognized as intangible assets when the conditions are met.

C. The cost of intangible assets invested by investors shall be determined according to the value agreed in the investment contract or agreement, except where the value stipulated in the contract or agreement is unfair.

D. Where the intangible assets acquired by the debtor in the form of non-cash assets for repayment of debts are accepted, or the creditor's rights receivable are exchanged into intangible assets, they shall be recorded at the fair value of the converted intangible assets.

E. For the intangible assets invested in non monetary transactions, the fair value of the intangible assets and the relevant taxes payable shall be taken as the entry cost.

F. For the intangible assets donated, if the donor provides the relevant credentials, they shall be valued according to the amount indicated on the credentials plus the relevant taxes and fees payable; if the donor fails to provide the relevant credentials, when there is an active market for similar or similar intangible assets, the estimated amount based on the market price of similar or similar intangible assets, plus the relevant taxes and fees payable, shall be regarded as the actual cost; If there is no active market for similar or similar intangible assets, the present value of the expected future cash flow of the donated intangible assets shall be taken as the actual cost.

The company analyzes and judges the service life of intangible assets when it acquires them. Intangible assets with limited service life shall be amortized by the straight-line method within their useful life; intangible assets with uncertain service life shall not be amortized.

② Estimation of the useful life of intangible assets with limited useful life

A. The fixed number of years prescribed by laws and regulations shall be in accordance with the time limit prescribed by laws and regulations;

B. Without the fixed number of years stipulated in laws and regulations, according to the number of years of benefit stipulated in the relevant contract;

C. If there are no laws and regulations and the number of years stipulated in the contract, and the economic service life can be reasonably estimated, the reasonably estimated service life shall be used.

D. If there is no fixed number of years mentioned above, it shall be amortized for no more than 10 years.

Projects	Expected service life	Basis
Land use right	40—50 years	The valid period stipulated by law
The patent right	10 or 20 years	The valid period stipulated by law
Trademark	10 years	The valid period stipulated by law
Other office software	3 years	Reasonable estimate

③ The judgment basis of intangible assets with uncertain service life

The company judges the land ownership held by overseas subsidiaries as intangible assets with uncertain service life.

④ Provision for impairment of intangible assets

The provision for impairment of intangible assets shall be calculated according to the difference between the recoverable amount of intangible assets and the net book value; the recoverable amount shall be determined on the basis of the higher of the net amount after deducting the disposal expenses from the fair value of the intangible assets and the present value of the expected future cash flow of the intangible assets.

(2) Accounting policy for internal research and development expenditure

① Specific criteria for dividing the research phase and development phase of the company's internal research and development projects

A. The research phase of the internal development project:

a. When the R & D project is approved by the board of directors or management and carries out planned activities such as collecting relevant information, market research, comparing products in the market, etc.

b. Materials and related preparatory activities for further R & D projects have not resulted in phased results.

B. The development phase of an internal development project:

a. Specific application of the research results in the R & D stage to produce new or substantially improved devices, products, etc.;

b. It is more likely to produce results.

② Accounting of internal research and development project expenditure

The expenditure of the research stage of the internal research and development project of the company shall be recorded into the profit and loss of the current period when it occurs; the expenditure of the development stage of the internal research and development project shall be recognized as intangible assets when the following conditions are met at the same time, otherwise it shall be recorded into the profit or loss of the current period when it occurs.

A. It is technically feasible to complete the intangible asset so that it can be used or sold;

B. Having the intention to complete the intangible asset and use or sell it;

C. The ways in which intangible assets generate economic benefits, including the ability to prove that the products produced by the intangible assets exist in the market or the intangible assets themselves exist in the market, and that the intangible assets will be used internally shall prove their usefulness;

D. Have sufficient technical, financial and other resources to complete the development of the intangible asset and have the ability to use or sell the intangible asset;

E. The expenditure belonging to the development stage of the intangible assets can be measured reliably.

20. Impairment of long-term assets

For non-financial non-current assets such as fixed assets, construction in progress, productive biological assets, intangible assets, investment property measured at cost model and long-term equity investment in subsidiaries, cooperative enterprise and joint ventures, the company judges whether there are signs of impairment on the balance sheet date (for details, see the signs of impairment listed in the accounting policies of fixed assets and other long-term assets); If there are signs of impairment, the recoverable amount shall be estimated and the impairment test shall be carried out.

If the impairment test results show that the recoverable amount of the asset is lower than its book value, the impairment provision shall be calculated according to the difference and the impairment loss shall be included. The recoverable amount is the higher between the net amount of the fair value of the asset minus the disposal expenses and the present value of the expected future cash flow of the asset. The fair value of the asset shall be determined according to the price of the sale agreement in the fair transaction; if there is no sales agreement but there is an active market of the asset, the fair value shall be determined according to the buyer's bid of the asset; if there is no sales agreement and the active market of the asset, the fair value of the asset shall be estimated on the basis of the best information available. Disposal expenses include legal fees related to asset disposal, related taxes, handling fees, and direct costs incurred in order to make the assets in a marketable state. The expected future cash flow of an asset shall be determined by selecting an appropriate discount rate according to the present value of the expected future cash flow generated by the continuous use of the asset and the final disposal. The provision for impairment of assets shall be calculated and confirmed based on individual assets. If it is difficult to estimate the recoverable amount of individual assets, the recoverable amount of the asset group shall be determined based on the asset group to which the asset belongs. An asset group is the smallest portfolio that can independently generate cash inflows.

Goodwill is tested every year, regardless of whether there are signs of impairment. During the test, the book value of goodwill is apportioned to the asset group or asset group that is expected to benefit from the synergy effect of the business merger; the test results show that the recoverable amount of the asset group or asset group containing the apportioned goodwill is lower than its book value, the corresponding impairment loss shall be recognized. The amount of impairment loss shall first be deducted against the book value of the goodwill apportioned to the asset group or combination of assets, and then according to the proportion of the book value of assets other than goodwill in the asset group or combination of assets, the book value of other assets shall be deducted proportionally.

Once the impairment loss of the above-mentioned assets is recognized, it shall not be reversed in the subsequent accounting period.

21. Long-term prepaid expenses

The expenses for which long-term prepaid expense accounting has occurred and the amortization period is more than 1 year (excluding 1 year). The long-term prepaid expenses shall be accounted for according to the actual amount and shall be amortized within the benefit period or the prescribed amortization period by using the straight-line method. If the long-term expense item to be amortized does not benefit from the future accounting period, all the amortized value of the item that has not been amortized will be transferred to the profit or loss of the current period.

22. Staff and workers' salary

(1) Accounting treatment of short-term compensation

Short-term salaries include wages, bonuses, allowances and subsidies, employee welfare, medical insurance, maternity insurance, industrial injury insurance, housing accumulation fund, trade union funds and staff education funds, non-monetary benefits and so on. During the accounting period when employees provide services to the company, the company shall recognize the actual short-term employee compensation as liabilities and include it in the profits and losses or related asset costs of the current period. Among them, non-monetary benefits are measured at fair value.

(2) Accounting treatment of after-service benefits

A. Set up the withdrawal plan

The withdrawal plan set by the company mainly includes basic old-age insurance, unemployment insurance, etc. During the accounting period when employees provide services to the company, it is recognized as a liability according to the amount due and included in the relevant asset costs or current profits and losses.

B. Set up a benefit plan

According to the formula determined by the expected cumulative welfare unit method, the welfare obligations arising from the benefit plan are attributed to the period during which the employee provides services, and is included in the current profit or loss or related asset costs.

The deficit or surplus resulting from the present value of the set benefit plan obligations minus the fair value of the set benefit plan assets is recognized as a net liability or net asset of a set benefit plan. If there is a surplus in the benefit plan, the net assets of the benefit plan shall be measured by the lower of the surplus and the asset ceiling of the benefit plan.

All obligations to set benefit plans, including those expected to be paid within 12 months after the end of the annual reporting period for the provision of services by employees, are discounted according to the market yield of treasury bonds or high-quality corporate bonds in an active market that match the balance sheet date with the duration and currency of the set benefit plan obligations.

The service costs arising from the establishment of the benefit plan and the net interest of the net liabilities or net assets of the benefit plan are included in the current profit or loss or the cost of related assets; the changes arising from the re-measurement of the net liabilities or net assets of the benefit plan are included in other comprehensive income, and do not return to profit or loss in subsequent accounting periods. When setting up the settlement of the benefit plan, the settlement gain or loss shall be confirmed according to the difference between the present value of the obligation of the set benefit plan and the settlement price determined on the balance sheet date.

(3) Accounting treatment of dismissal benefits

To terminate the labor relationship with the employee before the expiration of the employee's labor contract, or to make a proposal for compensation to encourage the employee to voluntarily accept the reduction, when the company cannot unilaterally

withdraw the dismissal benefits provided by the termination plan or the proposed reduction, and if the company recognizes the costs related to the restructuring involved in the payment of dismissal benefits as soon as possible, confirm the employee salary liabilities arising from the dismissal benefits, and shall be included in the profits and losses of the current period. However, if the dismissal benefits are not expected to be fully paid within 12 months after the end of the annual reporting period, they shall be dealt with in accordance with the remuneration of other long-term staff and workers.

(4) Accounting methods for other long-term employee benefits

Other long-term employee benefits provided by the company to employees in accordance with the set deposit plan shall be subject to accounting treatment in accordance with the set deposit plan, and in addition, accounting treatment shall be carried out in accordance with the set benefit plan.

23. Estimated liabilities

Estimated liabilities are liabilities that may arise from contingencies, including those arising from external guarantees, pending litigation, product quality assurance, restructuring obligations, etc.

(1) The recognition criteria of estimated liabilities

When a company has obligations related to contingencies and concurrently meets the following conditions, it shall be recognized as an estimated liability in the balance sheet:

- ① This obligation is the current obligation of the Company;
 - ② The performance of this obligation is likely to lead to the outflow of economic benefits from the enterprise;
 - ③ The amount of the obligation can be measured reliably.
- (2) The measurement methods of estimated liabilities.

On the balance sheet date, taking into account factors such as risks, uncertainties and the time value of money associated with contingencies, the initial measurement is based on the best estimate of expenditure required to meet the relevant current obligations, and later on each balance sheet date, review the book value of the estimated liability. If there is conclusive evidence that the book value does not truly reflect the current best estimate, the book value shall be adjusted according to the current best estimate.

If all or part of the expenditure required to pay off the estimated liability is expected to be compensated by a third party, the amount of compensation shall be recognized separately as an asset when it is basically determined that it can be received, and the amount of compensation recognized shall not exceed the book value of the estimated liability.

After the losses incurred by the invested unit have been offset by the book value of the long-term equity investment and other substantially constitute the long-term rights and interests (long-term receivables or other receivables) of the net investment in the invested unit to zero, if the investee still bears additional obligations in accordance with the contract and agreement, the portion expected to be borne shall be recognized as an estimated liability.

24. Share payment

Share-based payment is a transaction in which equity instruments are granted or liabilities determined based on equity instruments in order to obtain services provided by employees or other parties. Share-based payment is divided into equity-settled share-based payment and cash-settled share-based payment.

(1) There is no equity-settled share payment for employee services or similar services of other parties in exchange for the right to exercise immediately after the granting of the waiting period, and the relevant costs or expenses shall be included at the fair value of the equity instruments on the date of grant, and the capital reserve shall be increased accordingly. The cash-settled share-based payment

that can be exercised immediately after the grant shall be included in the relevant costs or expenses at the fair value of the liability on the date of the grant, and the liability shall be increased accordingly.

(2) There is a share payment in the waiting period, and on each balance sheet day during the waiting period, the services provided by the employees or other parties shall be included in the costs and expenses, in which the settlement of rights and interests involves employees, based on the best estimation of the number of instruments of exercisable rights and interests, it is measured according to the fair value of the equity instruments on the date of grant, and the capital reserve is increased accordingly. If it is settled in cash, it shall be re-measured and recognized at the fair value of liabilities on the balance sheet date, and the liabilities shall be increased accordingly; where equity settlement involves the exchange of services from other parties, it shall be measured at the fair value of other parties' services at the date of acquisition (when it cannot be reliably measured, it shall be measured according to the fair value of equity instruments at the date of service acquisition), and the capital reserve shall be increased accordingly.

(3) For the share-based payment of equity settlement, the exercise date shall recognize the share capital and capital premium according to the exercise situation, and at the same time carry forward other capital reserves recognized during the waiting period. No adjustments will be made to the recognized costs and the total amount of all rights and interests after the date of exercise.

(4) For cash-settled share-based payments, costs are no longer recognized after the workable date, and changes in the fair value of liabilities are recorded in the current profits and losses (fair value changes).

There is no share payment during the reporting period.

25. Unexpired liability reserve

The term "unexpired liability reserve" refers to the reserve set aside by a financing guarantee company for the unexpired financing guarantee liability.

In the current period when the company's subordinate financing guarantee company recognizes the premium income, it shall draw the unexpired liability reserve according to 50% of the current year's guarantee fee income; draw the unexpired liability reserve as the adjustment of the premium income, and recognize the liability of the unexpired liability reserve.

On the balance sheet date, the financing guarantee company shall, in accordance with the above provisions, recalculate and determine the difference between the amount of unexpired liability reserves and the balance of unexpired liability reserves that have been drawn, and adjust the balance of unexpired liability reserves.

26. Preferred stock, perpetual debt and other financial instruments

For financial instruments such as preferred shares, perpetual bonds, stock options and convertible corporate bonds, according to the contract terms of the financial instruments issued and the economic essence reflected, combined with the definition of financial assets, financial liabilities and equity instruments, at the time of initial recognition, these financial instruments or their components are classified as financial assets, financial liabilities or equity instruments. If the issued non-derivative financial instrument contains both the financial liability component and the equity instrument component, the fair value of the financial liability component (including the fair value of the non-equity embedded derivatives that may be included) shall be determined at the initial measurement, and then the fair value of the liability component shall be deducted from the fair value of the composite financial instrument as the value of the equity instrument component.

Preferred shares, perpetual bonds and other financial instruments classified as debt instruments shall be initially measured according to their fair value after deducting transaction costs, and subsequently measured according to the amortized cost by using the effective interest rate method, its interest expenditure or dividend distribution shall be dealt with in accordance with borrowing costs, and the gains or losses arising from its repurchase or redemption shall be recorded into the profits and losses of the current period. For preferred shares, perpetual bonds and other financial instruments classified as equity instruments, the consideration received at the time of issuance shall increase the owner's equity after deducting transaction costs, and their interest expenses or

dividend distribution shall be dealt with in accordance with profit distribution, buyback or cancellation shall be treated as a change in equity.

The conditions or events agreed upon in the original contract terms of the issued financial instruments change with the passage of time or the change of the economic environment, resulting in the accounting treatment of issued financial instruments when they need to be reclassified: equity instruments are reclassified as financial liabilities, the fair value of the financial instrument is measured on the reclassification date, and the difference between the book value of the equity instrument on the reclassification date and the fair value of the financial liability is recognized as equity. Financial liabilities are reclassified as equity instruments, which are measured by the book value of financial liabilities on the date of reclassification.

There is no preferred stock, perpetual debt and so on during the reporting period.

27. Guarantee compensation reserve

The guarantee compensation reserve refers to the reserve set aside by the financing guarantee company for the unexpired financing guarantee contract to pay the insurance liability to the beneficiary when the guarantor is unable to repay the debt due.

In the current period when the revenue from the financing guarantee contract is recognized by the financing guarantee company of the company, the guarantee compensation reserve shall be set aside in proportion to 1% of the balance of the guarantee liability at the end of the year. If the cumulative amount of the guarantee compensation reserve reaches 10% of the guarantee liability balance of the current year, the difference shall be drawn, and the guarantee compensation reserve shall be recognized as a liability at the same time.

The accumulative amount of the guarantee compensation reserve shall be based on the financial situation, production or living environment of the guarantor obtained, etc., to test the adequacy of the balance of the guarantee compensation reserve that has been calculated, and if it is insufficient, it shall be replenished according to the difference. If the relevant insurance liability reserve amount confirmed by the financing guarantee contract is less than the balance of the relevant insurance liability reserve confirmed on the date of adequacy test, the reserve for guarantee compensation shall not be adjusted.

28. Income

Whether the new income criteria have been implemented

Yes No

Accounting policies for revenue recognition and measurement.

(1) Recognition principle and Measurement method of Commodity Revenue from sales

When the goods sold by the company meet the following conditions at the same time, the revenue from the sales shall be recognized according to the amount of the contract or agreement price received or receivable from the purchaser.

①The main risks and rewards in the ownership of the goods have been transferred to the buyer, and the goods have been issued, collected or acquired the right to receive payment for the goods;

②There is neither the retention of the right of continued management, which is usually associated with ownership, nor the effective control of the goods that have been sold;

③The amount of income can be measured reliably;

④The relevant economic benefits are likely to flow into the enterprise;

⑤The related costs that have been or will be incurred can be measured reliably.

The collection of the contract or agreement price shall be deferred, and if the contract or agreement price is essentially of a financing nature, the amount of income from the sale of goods shall be determined according to the fair value of the contract or agreement price receivable.

The specific mode of confirmation of the company's income from selling goods: the company has received the payment (cash sale or advance payment) or is expected to recover the payment (credit), and the goods have been delivered to the buyer in

the agreed manner, and the invoice has been signed or signed by the buyer (the buyer shall enjoy the ownership of the goods and the related remuneration and risks after signing, including the right to sell or use the products, bear the risk of price fluctuations or damage to the products, etc.) recognized income in the current period. The company's main products are detailed in "Note 1, (4)".

(2) Recognition principle and measurement method of income from the right to the use of transferred assets

The company shall recognize it when the economic benefits related to the transfer of the right to the use of the assets can flow into the company and the amount of income can be measured reliably. The royalty income shall be calculated and determined in accordance with the charging time and method stipulated in the relevant contract or agreement.

29. Government subsidy

(1) Types and criteria of government subsidy

Government subsidy refers to the monetary or non-monetary assets obtained by the company free of charge from the government, but does not include the capital invested by the government as an investor.

Government subsidies are divided into assets-related government subsidies and income-related government subsidies. The Company defines the government subsidies obtained for the purchase, construction or other formation of long-term assets as the government subsidies related to the assets; the rest of the government subsidies are defined as the government subsidies related to the income.

In the specific classification judgment, the company first divides the government subsidies obtained according to the documents of the relevant government departments, and if the government subsidy documents are not clear, it is divided according to the actual content of the company's application for government subsidies.

(2) The confirmation time of government subsidy.

Under normal circumstances, government subsidies are recognized when they are received and the conditions attached to government subsidies are met; for government subsidies calculated according to fixed quota standards, they are measured according to the amount receivable.

(3) Accounting treatment of government subsidy

① If the government subsidy is a monetary asset, it shall be measured according to the amount received or receivable; if the government subsidy is a non-monetary asset, it shall be measured at fair value; if the fair value cannot be obtained reliably, it shall be measured according to the nominal amount (RMB 1 Yuan).

② Government subsidies related to assets shall be recognized as deferred income and shall be included in other income in stages during the useful life of the relevant assets in a reasonable and systematic manner. However, government subsidies measured according to the nominal amount shall be directly included in other income.

③ Government subsidies related to revenue shall be dealt with respectively in the following circumstances: those used to compensate the company for related expenses or losses in the subsequent period shall be recognized as deferred income, and other benefits shall be included in the period during which the relevant costs or losses are recognized; if used to compensate the company for related expenses or losses incurred, it shall be directly included in other income.

The company shall include government subsidies related to the daily activities of the company into other income, and government subsidies that are not related to daily activities into non-operating income.

④ If the recognized government subsidy needs to be returned, if there is relevant deferred income, the book balance of the relevant deferred income shall be written off, and the excess shall be included in other income or non-operating income; if there is no relevant deferred income, it shall be directly included in other income or non-operating income.

⑤ For the discount of policy-oriented preferential loans, the Company shall distinguish between the two cases in which the fiscal finance allocates the discount funds to the lending bank and the finance allocates the discount funds directly to the Company for accounting treatment. Where the finance allocates discount funds to the lending bank, and the lending bank provides loans to the

company at a policy preferential interest rate, the amount of the loan actually received shall be taken as the recorded value of the loan, the relevant borrowing costs shall be calculated according to the principal of the loan and the policy preferential interest rate. If the finance allocates the discount funds directly to the company, the corresponding discount will be deducted from the relevant borrowing costs.

30. Deferred income tax assets / deferred income tax liabilities

According to the difference between the book value of assets and liabilities and their tax basis, and the difference between the book value of items not recognized as assets and liabilities but which can be determined in accordance with the provisions of the tax law, the deferred income tax assets or deferred income tax liabilities are recognized by using the balance sheet liability method and calculated at the applicable tax rate expected to recover the asset or pay off the liability.

(1) Deferred income tax asset recognition

Recognize the relevant deferred income tax assets to the extent that the company is likely to obtain taxable income to offset deductible temporary differences in the future. Deferred income tax assets are not recognized for deductible temporary differences under the following circumstances:

①The Company meets one of the following conditions for deductible temporary differences related to the investments of subsidiaries, associated companies and joint ventures:

- A. Temporary differences are unlikely to turn back in the foreseeable future;
- B. The amount of taxable income used to offset deductible temporary differences is likely to be unavailable in the future.

②At the same time, it satisfies the initial recognition of assets or liabilities arising from transactions with the following characteristics:

- A. The transaction is not a business merger;
- B. When the transaction occurs, it does not affect neither the accounting profit nor the taxable income (or deductible loss).

On the balance sheet date, review the book value of the deferred income tax assets, and write down the book value of the deferred income tax assets if it is likely to fail to obtain sufficient taxable income to offset the benefits of the deferred income tax assets in the future. When sufficient taxable income is likely to be obtained, the amount of the write-down shall be reversed.

Deductible losses and tax deductions that can be carried forward in subsequent years shall be treated as deductible temporary differences. To the extent that the amount of future taxable income that is likely to be used to offset losses and tax credits is recognized, the corresponding deferred income tax assets are recognized.

In judging whether an enterprise can generate sufficient taxable tax in the future period in which temporary differences are deductible, it is based on the latest financial budget or forecast data approved by the management of the enterprise and the five-year plan of the enterprise.

(2) Recognition of deferred income tax liability

Except for the taxable temporary differences arising from the following circumstances, the Company recognizes all deferred income tax liabilities arising from the taxable temporary differences:

①The initial recognition of goodwill;

②At the same time, it satisfies the initial recognition of assets or liabilities arising from transactions with the following characteristics:

- A. The transaction is not a business merger;
- B. When the transaction occurs, it does not affect neither the accounting profit nor the taxable income (or deductible loss).

③The Company has temporary taxable differences related to the investments of subsidiaries, associated companies and joint ventures, and meets the following conditions:

- A. The company can control the reversal time of temporary differences;
- B. Temporary differences are unlikely to turn back in the foreseeable future.

(3) Income tax expense

Income tax expenses include current income tax and deferred income tax. Current income tax and deferred income tax related to transactions and events recognized as other comprehensive income or directly included in shareholders' equity are included in other comprehensive income or shareholders' equity, and deferred income tax arising from a business merger adjusts the book value of goodwill, the rest of the current income tax and deferred income tax expenses (or income) are included in the current profit and loss.

31. Leases**(1) Accounting treatment of operating lease**

Where the company is the lessee, the rent paid shall be included in the cost of the relevant assets or the current profit or loss in accordance with the straight-line method during the lease period.

Where the company is a lessor, the leased assets shall be shown in the balance sheet according to the nature of the assets. The rent received shall be recognized as current profit or loss in accordance with the straight-line method during the lease period, and depreciation similar to the depreciable policy usually adopted in operating leased assets shall be adopted for fixed assets in operating leased assets, and other operating leased assets shall be amortized by a reasonable method.

(2) Accounting treatment of financial leasing

Where the company is a lessee, on the date of the beginning of the lease term, the lower of the fair value of the leased asset on the lease commencement date and the present value of the minimum lease payment shall be taken as the accounting value of the leased asset, and the minimum lease payment shall be regarded as the accounting value of long-term payable, and the difference shall be regarded as unrecognized financing expense. In addition, during lease negotiations and the signing of lease contracts, the initial direct costs attributable to the lease project are included in the value of the leased assets. The unrecognized financing fee shall be calculated by the effective interest rate method during the lease term. The contingent rent shall be recorded into the profit or loss of the current period when it is actually incurred.

When calculating depreciation of financial leased assets, a depreciation policy consistent with its own depreciable assets shall be adopted. If it can be reasonably determined that the company will acquire the ownership of the leased asset at the expiration of the lease term, the life of the leased asset on the date of the beginning of the lease period shall be taken as the depreciation period; if it is impossible to reasonably determine whether the ownership of the leased asset can be acquired after the expiration of the lease term, the shorter of the lease term and the life of the leased asset shall be taken as the depreciation period.

If the company is a lessor, on the date of the beginning of the lease term, the sum of the minimum lease collection amount and the initial direct fee on the lease commencement date shall be regarded as the accounting value of the financial lease receivable, and the unsecured residual value shall be recorded at the same time; the difference between the sum of the minimum lease receipt, the initial direct cost and the unsecured residual value and its present value shall be recognized as unrealized financing income. Unrealized financing income during the lease term, the effective interest rate method is used to calculate and recognize the financing income of the current period. The contingent rent shall be recorded into the profit or loss of the current period when it is actually incurred.

(3) Accounting treatment of after-sale and leaseback

According to the lease criteria, the company recognizes the sale and leaseback transaction as a financial lease or an operating lease.

If the sale and leaseback is recognized as a financial lease, the company regards the sale and leaseback transaction and the sale of the asset as a transaction, and does not recognize the gain or loss on the sale of the asset as the profit or loss of the current period, but defers it as financing expense and apportions it according to the depreciation progress of the asset, as the adjustment of depreciation

expense.

If the sale and leaseback is determined to be an operating lease, when the selling price is lower than the fair value, it shall be recognized as the profit or loss of the current period; if the selling price is higher than the fair value, the part higher than the fair value shall be deferred and amortized within the expected useful life of the asset. The difference between the fair value and the book value of the sold and leased assets is recognized as the profit or loss of the current period.

32. Hedging accounting

(1) The type of hedging business, the hedging relationship and the judgment of hedging effectiveness

The company's hedging business belongs to fair value hedging, which is mainly based on the consideration of avoiding the risk of purchasing price fluctuations of raw materials (corn, soybean, soybean meal, etc.), while the futures hedging business is carried out in the domestic agricultural product futures market.

The company continuously evaluates the effectiveness of hedging to determine whether the futures hedging is highly effective during the accounting period in which the hedging relationship is specified. Only highly effective futures hedging can be recognized and measured in accordance with hedging accounting (if it is not recognized as highly effective futures hedging, it will be treated as "Note III, (10) Financial Instruments-Derivatives". When the hedging meets the following conditions at the same time, the company considers it to be highly effective:

① At the beginning of the hedging and subsequent periods, the hedging is expected to be highly effective in offsetting the fair value changes caused by the hedging risk during the specified period;

② The actual set-off result of the hedge is in the range of 80% to 125%.

(2) Hedging accounting treatment method:

For fair value hedging, changes in the fair value of hedging derivatives are recorded in the profits and losses of the current period. The changes in the fair value of the hedged item due to the hedging risk shall be included in the profits and losses of the current period, while adjusting the book value of the hedged item; if the hedged item is a definite commitment that has not yet been confirmed, the cumulative fair value change of the determined commitment caused by the hedged risk shall be recognized as an asset or liability, and the related gains or losses shall be included in the profits and losses of the current period.

Adjustment description

Since January 1, 2019, the company has implemented the *Accounting Standards for Enterprises No. 22 - Recognition and Measurement of Financial Instruments* issued on document of Caihui No. 7 [2017] and the *Accounting Standards for Enterprises No. 37 - Presentation of Financial Instruments* issued on document of Caihui No. 14 [2017]. In accordance with the above standards, the company shall include the equity investments from the “financial assets available for sale” to the “other investment in equity instruments”.

(4) Description of the comparative data at the early stage of retroactive adjustment of new financial instrument standards or new lease standards implemented since 2019

Applicable Not Applicable

34. Important accounting judgment and estimation

Due to the inherent uncertainty of business activities and changes in external factors, the Company needs to make judgments, estimates and assumptions on accounting events that cannot be accurately measured in the accounting process. These judgments,

estimates and assumptions are based on the historical experience of the management of the Company and on the basis of considering other relevant factors. However, the actual results caused by the uncertainty of accounting events may differ from the current judgments and estimates of the management of the Company, which may result in significant adjustments to the book value of the assets or liabilities affected in the future. The company regularly reviews and evaluates the above-mentioned judgments, estimates and assumptions based on continuing operation, and carries out accounting treatment in accordance with enterprise accounting standards and relevant regulations. The important areas in which the Company is involved in judging, estimating and assuming the project amount in the financial statements are as follows:

(1) Provision for bad debts

According to the accounting policy of accounts receivable, the company uses the allowance method to calculate the loss of bad debts, and the provision for bad debts is based on the judgment and estimation of the management corresponding to the recoverable amount of accounts receivable. The difference between the actual results and the original reasonable expectations will affect the book value of receivables and the provision or reversal of the provision for bad debts of receivables during the period in which the estimate is changed.

(2) Provisions for inventories

The Company measures inventory at the balance sheet date at the lower of cost and net realizable value, and inventory impairment is based on the assessment of the marketability of inventory and its net realizable value. Determining the impairment of inventory requires the company to obtain conclusive evidence for the net realizable value and to make a judgment and estimate on the basis of considering factors such as the purpose of holding inventory. The difference between the actual results and the original reasonable expectations will affect the book value of the inventory and the provision for inventory depreciation or reversal during the period in which the estimate is changed.

(3) Impairment of investment in other equity instruments

The Company needs to use judgments and assumptions as to whether the investment in other equity instruments is impaired and to determine the amount of impairment. In the process of making judgments and assumptions, the Company needs to assess the extent and duration to which the fair value of the investment is lower than the book value, as well as the financial position, business outlook, industry conditions and technological changes of the invested object.

(4) Impairment of other long-term assets

The company conducts an impairment test for long-term equity investment, fixed assets, construction in progress, productive biological assets, intangible assets and other long-term assets when there are signs of impairment; goodwill is tested every year, regardless of whether there are signs of impairment. Impairment losses are recognised when the book value of an asset or group of assets is higher than the recoverable amount (the net fair value minus disposal expenses and the higher of the present value of the expected future cash flows).

The net amount of fair value minus disposal expenses shall be determined by referring to the sales agreement price or observable market price of similar assets in a fair transaction, minus the incremental cost directly attributable to the disposal of the asset; the expected future cash flow, data related to future cash flows such as the output, selling price and related operating costs of the asset or asset group are required. The Company estimates the recoverable amount on the basis of all available external information and forecasts made within the company on the basis of reasonable expectations and supportable assumptions about production, selling price, operating cost and so on.

(5) Depreciation and amortization

The company depreciates or amortizes fixed assets, productive biological assets and some intangible assets according to the straight-line method within the economic service life, and the service life is comprehensively determined based on historical experience, asset performance parameters and expected technical updates. If previous reasonable estimates change and the impact is significant, depreciation and amortization expenses will be adjusted in future periods.

(6) Income tax and other tax matters

In the normal business activities of the Company, there is a certain degree of uncertainty in the fiscal and tax treatment of some tax-related transactions or matters involving estimation and judgment, which may have an impact on the financial statements in the future accounting period, which mainly include:

①The company pays enterprise income tax in many countries at home and abroad, and whether some items can be listed before tax needs to be approved and confirmed by the competent tax authorities. If there is a difference between the final determination of these tax matters and the initial prediction and judgment, the difference will have an impact on the current income tax expenses during the final determination period.

②The Company can carry forward the deductible losses in subsequent years and recognize the corresponding deferred income tax assets to the extent that it is likely to obtain future taxable income that is likely to be used to offset the deductible losses. The company needs to use more judgment to reasonably estimate the period and amount of taxable income in the future. If the market of the future business segment or the profitability of a single taxpayer changes significantly from the current expected results, the difference will have an impact on deferred income tax expenses in the future period.

③Due to the particularity of the relevant tax policies related to the input tax deduction of agricultural products and the influence of the current low gross profit margin of the agricultural products initial processing plate, the accumulated amount of VAT credit of the subsidiaries of the Company engaged in slaughtering and meat primary processing business is relatively large. If there is a major change in the tax policy related to the input deduction of agricultural products in the future period, it may have an important impact on the taxes, fees, profits and losses payable in the future period.

VI. Tax**1. Major taxes and tax rates**

Tax category	Tax basis	Tax rate
Value added tax	Taxable sales	13%-3%
Urban maintenance and construction tax	Turnover tax actually paid	7%, 5%, 1%
Corporate income tax	Taxable income	30% -5%

If there are different tax payers of enterprise income tax rates, the disclosure shall be explained

2. Tax preference**I. Value added tax**

(1) The VAT rate for the production and sale of general feed products by the domestic feed production enterprises under the company shall be 10% before April 1, 2019; according to the Circular of the Ministry of Finance and the State Administration of Taxation on adjusting the VAT rate (Finance and Taxation (2018) No. 32), as of May 1, 2018, the VAT rate has been changed to 10%. According to the announcement of the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs on deepening the reform of value-added tax (announcement No. 39 of 2019 of the General Administration of Taxation of the Ministry of Finance), starting from April 1, 2019, the applicable tax rate for the production and sales of feed products will be adjusted to 9%. In addition, according to the "Notice of the Ministry of Finance and the State Administration of Taxation on the issue of exemption from VAT on Feed products" (Finance and Taxation (2001) No. 121), feed enterprises that produce and sell feed products in line with their provisions shall be exempted from VAT. Feed enterprises sell taxable goods other than feed at a VAT rate of 3% (small-scale taxpayers) or 9% and 13% (general taxpayers).

(2) The initial processing products of the domestic slaughtering and meat processing enterprises under the company shall be

subject to a VAT rate of 10% before April 1, 2019; according to the Circular of the Ministry of Finance and the State Administration of Taxation on adjusting the VAT rate (Finance and Taxation (2018) No. 32), from May 1, 2018, the applicable tax rate for primary agricultural products is 10%, and the VAT rate for cooked food and deeply processed products is 16%. According to the announcement of the relevant policies of the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs on deepening VAT reform (announcement No. 39 of 2019 of the General Administration of Taxation of the Ministry of Finance), the applicable tax rate for primary agricultural products will be adjusted to 9% from April 1, 2019. The VAT rate for cooked food and deeply processed products is 13%.

(3) The domestic breeding enterprises under the company shall be exempted from VAT in accordance with the provisions of Article 15 of the interim regulations of the People's Republic of China on value-added tax, "self-produced agricultural products sold by agricultural producers are exempted from VAT".

(4) The domestic trading companies under the company are exempt from VAT on the sale of feed products and fresh meat and egg products, and other products shall be subject to VAT at the national tax rates of 16% and 10% before April 1, 2019. According to the announcement of the relevant policies of the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs on deepening VAT reform (announcement No. 39 of 2019 of the General Administration of Taxation of the Ministry of Finance), the applicable tax rate will be adjusted to 13% and 9% from April 1, 2019.

(5) Subsidiary Sichuan Xinle Plastic Co., Ltd., Jiangsu Tiancheng Health Products Co., Ltd., Zibo Huide Feed Machinery Co., Ltd., Chengdu Fenglan Technology Co., Ltd., 16% VAT rate before April 1, 2019; According to the announcement of the relevant policies of the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs on deepening VAT reform (announcement No. 39 of 2019 of the General Administration of Taxation of the Ministry of Finance), the VAT rate shall be 13% from April 1, 2019.

(6) Among the overseas subsidiaries, subsidiaries operating in Vietnam selling feed products and farming selling self-produced agricultural products are exempt from value-added tax, and the value-added tax rate for the disposal of waste materials and fixed assets is 10%. The value-added tax rate for Sri Lankan companies is 12% GST New Hope Singapore Private Limited Company and the goods and services sold locally by New Hope Singapore Premix Co., Ltd. are levied 7% VAT (value-added tax). Subsidiaries operating in Indonesia, Bangladesh, the Philippines, Cambodia, Egypt and other countries sell feed products exempt from VAT.

II . Urban maintenance and construction tax and additional education fees

The company and its domestic subsidiaries implement: (1) the urban construction tax shall be calculated and paid at 7%, 5% or 1% of the turnover tax payable respectively according to different regions; (2) the education fee shall be paid at 3% of the turnover tax payable, and the local education fee shall be paid at 2% of the turnover tax payable.

III . Corporate income tax

(1) According to the Circular on tax Policy issues related to the in-depth implementation of the Western Development Strategy jointly issued by the Ministry of Finance, the General Administration of Customs and the State Administration of Taxation (Finance and Taxation (2011) No. 58) and the State Administration of Taxation on Enterprise income tax issues related to the in-depth implementation of the Western Development Strategy (State Administration of Taxation notice No. 12 of 2012), from January 1, 2011 to December 31, 2020, enterprise income tax will be levied at a reduced rate of 15% on encouraged industrial enterprises located in the western region. Guanghan Guoxiong, Zunyi Jiahao, Guiyang Xinke, Qiandongnan New Hope, Qijing Guoxiong, Chongqing Guoxiong, Ziyang Jiahao, Luzhou New Hope, Hope Food, Wuwei Hope, Hanzhong Hope, Zigong Hengbo, Lanzhou Hope, Nanning Guoxiong, Yulin New Hope, Guilin New Hope, Pengshan New Hope, Century Investment, Wulong New Hope, Food Holding, Kai County New Hope, Lhasa New Hope, Chongqing New Hope, Sanyuan New Hope, Baoji New Hope, Ningxia New Hope and other enterprises implement an income tax rate of 15% with the consent of the tax authorities. The income tax of each branch shall follow the principles of unified calculation, level-by-level management, local pre-payment and summary liquidation, and shall be collected and settled by the tax authorities in charge of the parent company at the end of the year.

(2) According to the Circular of the State Administration of Taxation of the Ministry of Finance on the implementation of the

tax Policy for the Development of the Western Region in Ganzhou City (Finance and Taxation (2013) No. 4), Announcement of Jiangxi Local Taxation Bureau on the Administration of preferential Enterprise income tax policies for the implementation of the Western Development of Ganzhou City (trial) (No. 5 of 2013) and the notice of Ganzhou Local Taxation Bureau on confirming that 29 enterprises, such as Ganzhou Hope Feed Co., Ltd., enjoy the preferential enterprise income tax policies for the large-scale development of the western region (G. S. D. S. H. [2013] No. 100), Ganzhou hopes to enjoy the preferential policy of enterprise income tax for the large-scale development of the western region from 2012 to 2020, and levy enterprise income tax at a reduced preferential rate of 15%.

(3) In accordance with the provisions of paragraph 1 of Article 27 of the Enterprise income tax Law of the people's Republic of China, Article 86 of the regulations of the People's Republic of China on the implementation of the Enterprise income tax Law and document No. 149 of Finance and Taxation (2008), enterprises in the meat processing industry under the company are exempted from enterprise income tax and have been put on record; the income tax rate for deep processing business is 25%.

(4) In accordance with the provisions of paragraph 1 of Article 27 of the Enterprise income tax Law of the People's Republic of China and Article 86 of the regulations of the people's Republic of China on the implementation of the Enterprise Income Tax Law of the People's Republic of China, livestock and poultry farming are exempted from income tax, and have been exempted from tax for the record.

(5) Subsidiary Weifang New Hope Liuhe Feed Technology Co., Ltd and Kunming New Hope Animal Nutrition Food Co., Ltd. are recognized as a high-tech enterprise, according to Article 28 of the Enterprise income tax Law of the People's Republic of China, the enterprise income tax shall be levied at a reduced rate of 15% for the high-tech enterprises that the state needs to support.

(6) Hong Kong Dongxian Co., Ltd. and Hong Kong Liuhe International Trading Co., Ltd. registered in Hong Kong have an income tax rate of 16.5%.

(7) New Hope Liuhe Investment Co. Ltd., registered in Lhasa implements a 15% preferential income tax rate for the development of the western region.

(8) The enterprise income tax policy of the company's overseas subsidiaries:

a. According to the local preferential tax policy, New Hope Hanoi Co., Ltd. has an income tax rate of 10% for its main business in 2019. Income from businesses other than the main business (including net income from waste materials, net interest and net non-operating income) shall not enjoy income tax benefits and shall be taxed at a tax rate of 20%.

b. According to the local preferential tax policy, Haifang Branch of New Hope Hanoi Co., Ltd., the main business shall be taxed at 10% income tax rate at 52% of taxable income. Income from businesses other than the main business (including net income from waste materials, net interest income and net non-operating income) shall not enjoy the preferential tax rate and shall be subject to the normal tax rate of 20%. Beijing Branch of New Hope Hanoi Co., Ltd., two exemptions and four halves, tax exemption in 2015, and a 50% reduction in 2017 in 2020, levied at 10% (the current Vietnamese corporate income tax rate is 20%).

c. Qinghua Branch of New Hope Hanoi Co., Ltd., New Hope Pingding Co., Ltd., according to the local tax policy, the income tax rate is 20% in 2019. Qinghua New Hope Breeding Service Co., Ltd. according to the local preferential tax policy, the main business income tax rate is 10% in 2019. Income from businesses other than the main business (including net income from waste materials, net interest, net non-operating income and expenditure) shall not enjoy income tax benefits and shall be taxed at a rate of 20%.

d. According to the local preferential tax policy, New Hope Ho Chi Minh City Co., Ltd. has a tax rate of 15% for the first phase of the project and 20% for the second phase of the project, which will be exempted for three years from 2008 (2008 to 2010) and halved for 5 years (2011 to 2015). The income tax rate is 10%, and the income tax rate is 20% from 2016. The tax rate of the third phase of the project is 20%, exempted for 2 years (2015 to 2016), halved for 4 years (2017 to 2020), the preferential income tax rate is 10%, and the income tax rate is 20% from 2021. The calculation method of income tax payable in 2019 is as follows: income tax payable = taxable income in the current operating year x fixed assets in the first phase of the project 27.01% × income tax rate 15% + taxable income in the current operating year x fixed assets in the second phase of the project 42.78% × income tax rate 20% + taxable income in the current operating year x the proportion of fixed assets in the third phase of the project. 30.21% x income tax rate 10%

+ (non-operating income + interest income) x 20%.

e. New Hope Tongta Aquatic Feed Co., Ltd. has an income tax rate of 15% within 12 years from the start of its business activities, and 20% in subsequent years, and enjoys the preferential policy of "exemption for 3 years from the profit year and reduction of levy by half for 7 years". The company was set up in 2008 and began to make a profit in 2010. 2019 is a half levy period with a tax rate of 7.5%. Income from other businesses (including net income from waste materials, net interest and net non-operating income) shall enjoy preferential tax policies, and the income tax rate shall be in accordance with the preferential policies for the main business. The tax rate for the second phase of the project is 20%. From 2018, it will be exempted for two years (2018 to 2019), halved for 4 years (2020 to 2023), the income tax rate will be 10%, and the income tax will be 20% from 2024.

f. According to Philippine tax law, New Hope Philippines Central Luzon Co., Ltd. and New Hope Philippines Tarlac Agricultural Technology Co., Ltd., are levied at a high rate of 2% of gross profit or 30% of actual profit.

g. New Hope Philippines Bulacan Agricultural Technology Co., Ltd. According to the local preferential tax policy, the enterprise is exempted from income tax for four years from the date of business, according to the date of registration with the BIR (State Taxation Bureau), the company is officially operating from July 1, 2013, tax-free for four years from July 2013 to June 2017, and will be taxed at a high level of 2% of gross profit or 30% of actual profit from 2018.

h. New Hope Isabella Agriculture Co., Ltd. According to Philippine tax policy, it is levied at a high rate of 2% of gross profit or 30% of actual profit. Income tax is levied at 2% of gross profit in 2019.

i. New Hope Bangladesh Co., Ltd., New Hope Agricultural Science and Technology Bangladesh Co., Ltd., New Hope Agriculture and Animal Husbandry Bangladesh Co., Ltd., the interest income of bank deposits in the total profits shall be taxed at 35% of the income (bank withholding 10%). The net non-operating income and expenditure is taxed at 35%. Income tax on total profits minus interest and non-operating income and expenditure: New Hope Bangladesh Co., Ltd. and New Hope Agricultural Technology Bangladesh Co., Ltd., less than 1 million taka (including 1 million) at a partial tax rate of 3%; The partial tax rate of 1 million tower-2 million taka (including 2 million) is 10%; the partial tax rate of more than 2 million taka is 15%. New Hope Agriculture and Animal Husbandry Bangladesh Co., Ltd., 1 million Taka (including 1 million) below 0; 1 million Taka-2 million Taka (including 2 million) tax rate 5%; 2 million Taka tax rate above 10%.

j. Sichuan New Hope Agriculture (Cambodia) Co., Ltd. in accordance with the local tax policy, the company was exempted from income tax for six years from the establishment of the factory (April 2010-April 2016), and obtained a three-year tax exemption extension in 2016, exempting income tax until December 2018. In 2019, the corporate income tax rate is 20%. When a company distributes profits, it needs to pay profit distribution tax at 14% of the amount distributed.

k. In accordance with the local tax policy, New Hope Lanka Co., Ltd. implements an income tax rate of 28% and is exempted from income tax in the early stages of the company's construction and production. The calculation method of the exemption period is 2 years of construction period, 2 years of production period, plus 5 years of tax exemption period, that is, 9 years of income tax exemption from the establishment of the company. Lanka Company was established on November 18, 2010, and the production period is calculated from April 12, 2012. It will no longer be in the tax-free period from 2019, and the interest income from bank deposits in the company's current profits is not exempted from income tax. The income tax rates on bank interest income are 12% and 28% (28% for more than 5 million rupees and 12% for less than 5 million rupees). Information about the asset group or asset group portfolio where goodwill is located

Explain the goodwill impairment testing process, the key parameters (such as the forecast period growth rate, stable period growth rate, profit margin, discount rate, forecast period, etc.) and the confirmation method of goodwill impairment loss when predicting the present value of future cash flow.

1) The method of goodwill impairment test: According to the present value of the estimated cash flow of related subsidiaries in the next five years, the value of the company's overall asset evaluation is compared with the sum of the company's current book value and the value of the goodwill of the restored minority shareholders.

2) Provision for goodwill impairment: The impairment amount of goodwill is determined according to the difference between the calculated recoverable cash present value of the company and the sum of the value of the company's existing book value and the restored goodwill of minority shareholders.

17. Long-term prepaid expenses

Unit: Yuan

Project	Opening balance	The amount increased in the current period	Amortization amount for the current period	Other reduced amounts	Final balance

Total	840,692,185.74	1,802,232.00

Note 1: The pledge loan due within one year is that Tibet Xinhao Technology Co., Ltd., a subsidiary of the company, has taken all its equity of Kangping Xinwang Agriculture and Animal Husbandry Co., Ltd. as pledge to provide equity pledge guarantee for Kangping Xinwang. See the pledge loan in long-term loans for details.

Note 2: The collaterals of the mortgage loan due within one year are the lands, plant and equipments of Beijing Qianxihe Food Co., Ltd. and New Hope Singapore Biotechnology Co., Ltd. See the mortgage loan in the long-term loan for details.

Note 3: The guaranteed loan due within one year is that the loan guaranteed by New Hope Liuhe Co., Ltd. for its subsidiaries. See the guaranteed loan in the long-term loan for details.

Note 4: long-term payables due within one year refer to the company's financing lease of fixed assets which will be due within one year.

29. Other current liabilities

Whether the new income standards have been implemented

 Yes No

Unit: Yuan

Project	Final balance	Opening balance
Non-bank financial borrowing	0.00	10,000,000.00
Total	0.00	10,000,000.00

30. Long-term loan**(1) Classification of long-term loans**

Unit: Yuan

Project	Final balance	Opening balance
Pledge loan	195,000,000.00	
Mortgage loan	59,054,122.60	21,496,622.80
Guaranteed loan	754,232,326.94	411,792,000.00
Credit loan	3,946,200,000.00	1,390,000,000.00
Total	4,954,486,449.54	1,823,288,622.80

Description of the classification of long-term loans:

(1) Pledge loan and pledge situation are as follows:

Condition of pledge	Amount of pledged loan
Equity of Kangping Xinwang Agriculture and Animal Husbandry Co., Ltd.	195,000,000.00
Total	195,000,000.00

Note: TibetXinhao Technology Co., Ltd., a subsidiary of the company, has taken all its equity of Kangping Xinwang Agriculture and Animal Husbandry Co., Ltd. as pledge to provide equity pledge guarantee for Kangping Xinwang to raise 200 million Yuan from China Development Bank Sichuan Branch, of which 5 million Yuan will be due within one year and has been transferred to "long-term loan due within one year".

(2) Mortgage loans and mortgaged assets are listed below:

Collateral	Original book value of collateral	Amount of mortgage loan
land and real estate of Beijing Qianxihe Food Co., Ltd.	44,613,867.29	38,700,000.00
land and plant of New Hope Singapore Biotechnology Co., Ltd.	45,299,480.14	20,354,122.60
Total	89,913,347.43	59,054,122.60

Note 1: Laibin Xinhao Agriculture and Animal Husbandry Co., Ltd. used the land and real estate of Beijing Qianxihe Food Co., Ltd. as collateral to raise 39.2 million Yuan from China Development Bank Guangxi Branch, of which half million Yuan will be due within one year and has been transferred to "long-term loan due within one year";

Note 2: New Hope Singapore Biotechnology Co., Ltd. used its land and plant as collateral to raise 22.2167 million Yuan from United Overseas Bank, of which 1.8626 million Yuan will be due within one year and has been transferred to "long-term loan due

within one year".

(3) The details for guarantee loan are listed below:

The guarantee party and the guaranteed party	Final Balance
New Hope Liuhe Co., Ltd. as a guarantee for Yangling Benxiang Agricultural Industry Group Co., Ltd	90,000,000.00
New Hope Liuhe Co., Ltd. as a guarantee for Yanting Xinhao Agriculture and Animal Husbandry Co., Ltd	126,380,000.00
New Hope Liuhe Co., Ltd. as a guarantee for Weinan Xinliu Technology Co., Ltd.	52,500,000.00
New Hope Liuhe Co., Ltd. as a guarantee for Yijun Xinliu Technology Co., Ltd.	132,000,000.00
New Hope Liuhe Co., Ltd. as a guarantee for Liaocheng Xinhao Agriculture and Animal Husbandry Co., Ltd.	44,066,326.94
New Hope Liuhe Co., Ltd. as a guarantee for New Hope Singapore Private Limited Company	209,286,000.00
New Hope Liuhe Co., Ltd. as a guarantee for Shangdong New Hope Liuhe Group Co., Ltd.	100,000,000.00
Total	754,232,326.94

Note 1: New Hope Liuhe Co., Ltd., as a guarantee for Yangling Benxiang Agricultural Industry Group Co., Ltd., raised 100 million Yuan from Agricultural Bank of China Co., Ltd. Yangling Demonstration Area Branch, of which 10 million Yuan will be due within one year and has been transferred to "long-term loan due within one year";

Note 2: New Hope Liuhe Co., Ltd., as a guarantee for Yanting Xinhao Agriculture and Animal Husbandry Co., Ltd., raised 130 million Yuan from Bank of China Co., Ltd. Chengdu Shudu Avenue Sub-branch, of which 3.62 million Yuan will be due within one year and has been transferred to "long-term loan due within one year";

Note 3: New Hope Liuhe Co., Ltd., as a guarantee for Liaocheng Xinhao Agriculture and Animal Husbandry Co., Ltd., raised 55.0829 million Yuan from Agricultural Bank of China Co., Ltd. Yanggu Sub-branch, of which 11.0166 million Yuan will be due within one year and has been transferred to "long-term loan due within one year";

Note 4: New Hope Liuhe Co., Ltd., as a guarantee for New Hope Singapore Private Limited Company, raised USD 45 million (313.929 million Yuan) from the International Finance Corporation, of which 104.643 million Yuan will be due within one year and has been transferred to "long-term loan due within one year".

Other instructions, including the interest rate range:

The interest rates on the company's long-term loans at the end of the period ranged from 3.75% to 4.8%.

31. Long-term payable

Unit: Yuan

Project	Final balance	Opening balance
Long-term payable	6,000,000.00	15,500,000.00
Total	6,000,000.00	15,500,000.00

(1) List long-term payables according to the nature of the payment

Unit: Yuan

Project	Final balance	Opening balance
Financing lease payable	6,000,000.00	15,500,000.00
Among it: Financing lease - long-term payables	6,144,875.00	16,306,840.29
Financing lease - unconfirmed financing fee	-144,875.00	-806,840.29
Total	6,000,000.00	15,500,000.00

Other instructions:

Note: long-term payable is the financing lease formed by the re-leaseing of its transferring some machinery equipments to New Hope Finance Co., Ltd. and the obtaining the ownership of those machinery equipments in nominal value of 100Yuan after the expiration of the lease in a contract signed by the company's subsidiary, Weifang New Hope Liuhe Feed Co., Ltd., and New Hope Finance Co., Ltd.

32. Deferred Income

Unit: Yuan

Project	Opening balance	Increase in this period	Decrease in this period	Final balance	Cause of formation
Government subsidy	289,061,565.64	29,322,490.26	32,858,629.03	285,525,426.87	
Unrealized leaseback income	-1,555,441.10	965,190.30	136,588.52	-726,839.32	Leaseback
Total	287,506,124.54	30,287,680.56	32,995,217.55	284,798,587.55	--

Projects involving government subsidies:

Unit: Yuan

Debt item	Opening balance	The amount of new subsidy in this period	The amount of non-operating income in the current period	The amount of other income will be included in the current period	The amount of deduction of costs and expenses in the current period	Other changes	Final balance	Related to assets / earnings

Weifang Heshengyuma chinery equipment allowance	417,833.35			43,600.00			374,233.35	Related to assets
Tariff return of imported equipment of Weifang Heshengyuan	758,590.52			80,558.20			678,032.32	Related to assets
Fixed assets technical transformation subsidy in 2018		1,862,000.00		139,650.03			1,722,349.97	Related to assets
Liaocheng City sewage treatment special fund	44,582.95			44,582.95				Related to assets

Cultivation and industrialization demonstration of "Guoxiong" brand biological high energy pig compound feed and high survival rate grass carp breeding compound feed	220,000.08			54,999.96			165,000.12	Related to assets
Industrial application of new safe and efficient pig feed	79,999.76			20,000.04			59,999.72	Related to assets
Industrialization demonstration of nutrition regulation technology in pig health breeding	16,000.24			3,999.96			12,000.28	Related to assets
Integrated research and industrialization of key technologies for safe and high digestibility piglet feed production	600,000.00						600,000.00	Related to assets

Development and application of Fenglan technology microecological preparation products	35,599.76			8,900.04			26,699.72	Related to assets
A method of preparing lutein crystal from marigold dried flower	48.33			48.33				Related to assets
New microecological preparation and biological feed R & D and industrialization	1,377,029.57			246,929.00			1,130,100.57	Related to assets
Transformation application project of lutein crystal technology based on biological extraction of marigold dried flower	86,516.15			16,159.80			70,356.35	Related to assets
Industrial application of high-efficient extraction of lutein crystal from marigold dried flower	1,000,000.00			1,000,000.00				Related to earnings

Industrial application of Lactobacillus casei feed additive	1,993.73			1,196.28			797.45	Related to earnings
Subsidy for the construction of sheds Construction of shed in breeding base in Wuhan Liuhe	62,500.00						62,500.00	Related to assets
Transformation project of scientific and technological achievements from Nanchong New Hope	200,000.00			200,000.00				Related to earnings
Technical transformation project - New Hope phase I feed production line project	596,875.00			37,500.00			559,375.00	Related to assets
Fund for industrial development - deep processing of agricultural products	994,791.67	1,000,000.00		101,562.51			1,893,229.16	Related to assets

Industrialization application of the key technology of pig health breeding and meat deep processing from Sichuan Xinke	100,000.00						100,000.00	Related to assets
R & D and industrialization of new microecological preparation and bio feed	500,000.00						500,000.00	Related to assets
Subsidy for Luzhou New Hope gas transformation project	147,501.66			12,830.04			134,671.62	Related to assets
Special line subsidy for Yulin pig feed	235,763.73			31,597.28			204,166.45	Related to assets
Guilin pig feed production line type 600 group	141,750.00			27,000.00			114,750.00	Related to assets
Subsidy for Guangzhou Hope treatment of high pollution fuel boiler	112,000.04			16,000.00			96,000.04	Related to assets
Guangzhou Hope motor renovation subsidy	100,201.67						100,201.67	Related to assets

Large data optimization of high efficiency bacteria and algae wastewater resource system and demonstration of resistant feed products		360,000.00		166,356.56			193,643.44	Related to assets
Guangdong modern agricultural industry technology system innovation team construction (feed industry) project		50,000.00					50,000.00	Related to assets
Jieyang Guoxiong boiler subsidy	109,866.65			12,800.04			97,066.61	Related to assets
Huaihua Xiangzhu bulk raw material line technical transformation subsidy	33,600.00			4,400.00			29,200.00	Related to assets
Subsidy for turnover house in Chenzhou	125,000.00			125,000.00				Related to assets
Subsidy for bridge construction in Jingzhou	85,021.13			2,020.22			83,000.91	Related to assets
Jingzhou land subsidy	626,103.32			14,585.86			611,517.46	Related to assets

Hanzhong Hope boiler renovation subsidy	130,499.99			18,000.00			112,499.99	Related to assets
Wuwei Hope natural gas boiler renovation subsidy	67,333.27			8,000.04			59,333.23	Related to assets
Lanzhou Hope natural gas boiler renovation subsidy	171,666.61			20,000.04			151,666.57	Related to assets
Special subsidy for Huaian Hope Subei Science and Technology	500,000.00						500,000.00	Related to assets
Shiji investment and technological transformation project subsidy	1,161,666.62			170,000.00			991,666.62	Related to assets
Reconstruction project of animal husbandry science & Technology Laboratory	400,000.00						400,000.00	Related to assets
Research and application of key technologies for efficient utilization of protein feed resources	190,000.00						190,000.00	Related to earnings

Feed industry analysis and testing platform	38,000.00						38,000.00	Related to assets
Animal and poultry product quality and safety control laboratory project	1,000,000.00						1,000,000.00	Related to assets
The plan of Rongpiao in animal husbandry science and technology	1,000,000.00	750,000.00		1,000,000.00			750,000.00	Related to earnings
Zhuge elite plan	1,200,000.00	600,000.00					1,800,000.00	Related to earnings
Construction and integrated application of safe and efficient bio feed technology system	1,250,000.00						1,250,000.00	Related to assets
Reward fund for pig transferred out of large county from Ziyang Agriculture and Animal Husbandry	194,999.92			40,699.92			154,300.00	Related to assets

vegetable basket project subsidy of Ziyang Agriculture and Animal Husbandry	300,000.08			36,799.92			263,200.16	Related to assets
Research and development of key processing technology of collagen elastic ham sausage of New Hope Food	5,833.29			5,833.29				Related to assets
Special appropriation of New Hope Food for research and application of protein crosslinking technology in meat processing	186,180.32			60,382.80			125,797.52	Related to assets
Live pig industrialization project of New Hope Agriculture and Animal Husbandry	420,206.45			173,878.56			246,327.89	Related to assets
R&D on the key technology of production and processing of fruit flavor ham sausage	1,666.71			1,666.71				Related to assets

Integrated technology and industrialization of deep processing and cold chain storage and transportation of high-quality pork	415,840.04			103,959.96			311,880.08	Related to assets
The second batch of project funds of "one project, one discussion" for industrial economic development in suburban county of Chengdu	861,111.08			72,463.80			788,647.28	Related to assets
A kind of intestines and grains and its making method	83,333.30			20,000.04			63,333.26	Related to assets
up-market meet enzyme hydrolysis anti starch retrogradation technology and new product development and application	511,440.00			127,860.00			383,580.00	Related to assets

The 9th batch of "applied technology research and development fund project - integrated technology integration and industrialization of deep processing and cold chain storage and transportation of high-quality pork" in 2014	64,333.37			64,333.37				Related to earnings
Research and industrialization on key technology of quick-frozen prepared food processing	22,500.00			9,000.00			13,500.00	Related to earnings
Subsidy for yak industry chain project	1,450,300.00						1,450,300.00	Related to assets
Research and industrialization on key technology of quick-frozen prepared powder coated food food processing	400,000.00			343,033.13			56,966.87	Related to earnings

A microwave pre-fried paste and a method for processing cooked meat food with this paste	100,000.00						100,000.00	Related to assets
Subsidy for Aba yak breeding base	359,550.48			33,263.48			326,287.00	Related to assets
Subsidy for Aba yak sewage treatment project	149,808.33			40,000.00			109,808.33	Related to assets
Technical transformation of cattle and sheep slaughtering production line	148,489.68			11,286.22			137,203.46	Related to assets
High quality forage demonstration base	68,265.69			14,371.69			53,894.00	Related to assets
Subsidy to Southwest University for Nationalities	290,800.00	144,600.00					435,400.00	Related to earnings
Integration and demonstration of beef cattle safety production technology innovation	878,000.00						878,000.00	Related to assets
Special fund for western talent project		700,000.00					700,000.00	Related to earnings

Wuhan Guoxiong high fuel subsidy	367,333.32			38,000.04			329,333.28	Related to earnings
Xiajin agricultural machinery subsidy	86,288.51			18,165.96			68,122.55	Related to assets
Xiaoxian boar station subsidy	99,166.67			9,999.96			89,166.71	Related to assets
60,000.00 tons of chicken segmentation products production line expansion and base construction project of Xiaoyi Food	2,783,047.60			464,000.00			2,319,047.60	Related to assets
Subsidyto Xiaoyi Food capital construction project	866,665.72			100,000.00			766,665.72	Related to assets
Subsidyto the laborator of Xiaoyi Food	1,899,999.98						1,899,999.98	Related to assets
Fixed assets subsidy for Zhengzhou Quansheng Farm		2,625,000.00					2,625,000.00	Related to assets
Hongyuan Yak slaughtering production line flow project		650,000.00					650,000.00	Related to assets

Infrastructure construction cost of Henan Liuhe Feed Co., Ltd.	2,722,753.98			67,786.68			2,654,967.30	Related to assets
Infrastructure construction cost of Henan Liuhe Feed Co., Ltd.	66,782.65			8,347.80			58,434.85	Related to assets
Land return of Henan Liuhe Feed Co., Ltd.	2,130,300.27			52,599.96			2,077,700.31	Related to assets
Land return of Gaotang Liuhe Rongda Feed Co., Ltd.	2,595,999.86			59,000.04			2,536,999.82	Related to assets
Land return fund of Anyang New Hope Liuhe Feed Co., Ltd.	1,679,418.30			44,195.28			1,635,223.02	Related to assets
Land return of Shanxian Liuhe Feed Co., Ltd.	8,550,000.18			189,999.96			8,360,000.22	Related to assets
Infrastructure construction supporting fee of Hubei Tuanfeng Zhonghui animal husbandry technology Co., Ltd.	264,278.28			47,333.28			216,945.00	Related to assets
Infrastructure construction supporting fee of Pingxiang new hope feed Co., Ltd.	4,762,500.04			211,666.64			4,550,833.40	Related to assets

Land return of Jinan Laiwu Liuhe Lelin Feed Co., Ltd.	5,788,033.09			140,600.04			5,647,433.05	Related to assets
Land return of Jiangxi United Agriculture and Animal Husbandry Development Co., Ltd	2,518,310.52			18,934.68		2,499,375.84		Related to assets
Land return of Taihe New Hope Agriculture and Animal Husbandry Technology Co., Ltd.	1,132,556.00			94,368.00			1,038,188.00	Related to assets
Land return of Zoucheng New Hope Liuhe Feed Co., Ltd	2,809,859.16			63,380.28			2,746,478.88	Related to assets
Land compensation of Fuyang Liuhe Feed Co., Ltd	3,680,533.35			84,208.92			3,596,324.43	Related to assets
Infrastructure construction supporting fee of Daqing Liuhe Feed Co., Ltd.	5,103,700.00			400,000.00			4,703,700.00	Related to assets
Research funds for fermentation equipment	187,500.13			27,777.72			159,722.41	Related to assets

Boiler renovation subsidy to Shanghe Liuhe	244,444.42			33,333.36			211,111.06	Related to assets
Guarantee support fund to Linyi Danbao Co., Ltd.	125,848.70						125,848.70	Related to earnings
Land subsidy of Qingdao Tianrun Food Co., Ltd.	2,190,354.04			53,099.52			2,137,254.52	Related to assets
Key technology research and industrialization demonstration of low emission feed preparation for waterfowl	864,284.73			60,222.58			804,062.15	Related to assets
Demonstration of innocuous treatment of breeding waste by enzyme preparation and microbial preparation	41,684.00			32,000.00			9,684.00	Related to earnings
Revise the standard of hydrolyzed feather powder for feed	24,067.00						24,067.00	Related to earnings

Project team of test of chemical autoluminescence for detection of residues in poultry meat	162,087.41			27,200.00			134,887.41	Related to earnings
Integrated demonstration of high efficiency feed creation and modern production technology of high-quality meat and poultry	20,699.74			3,269.00			17,430.74	Related to earnings
Innovation capacity building project of Technology Center	1,212,308.48			397,953.67			814,354.81	Related to assets
Fast detection method of Urea formaldehyde polymer in fish meal	23,085.00						23,085.00	Related to assets
Research and application of feed safety control and rapid detection technology	33,235.44						33,235.44	Related to earnings

Research on molecular mechanism of plant polyphenols against oxidative stress in broilers	80,000.00						80,000.00	Related to earnings
Determination of acid soluble protein in feedstuff	97,664.00			93,234.51			4,429.49	Related to earnings
Demonstration and promotion of FMD purification in breeding pig farms	210,458.40	34,340.00		83,037.99			161,760.41	Related to earnings
Key technology integration and industrial demonstration project of marine agricultural biological products with an annual output of 3000 tons	570,000.00	510,000.00		999,931.04			80,068.96	Related to earnings
Research and demonstration on the key technology of healthy, efficient and environment-friendly breeding of meat duck	279,405.94	25,274.82		304,680.76				Related to earnings

Degradation of mycotoxins in prawn feed materials by fermentation technology (special)	46,260.38						46,260.38	Related to earnings
Study on immune procedure of classical swine fever and Pseudorabies in large scale pig farms (special project)	105,703.30	122,800.00		150,197.00			78,306.30	Related to earnings
Study on the formulation technology of environment-friendly and non-resistant feed for meat and poultry (special project)	3,797,136.92			1,485,429.53			2,311,707.39	Related to earnings
"China& EU intergovernmental cooperation project" - EU horizon SFS-46-2017 (special project)	500,000.00	300,000.00		164,953.51			635,046.49	Related to earnings
Financial subsidies for standardized ecological construction projects	2,381,944.49			83,333.28			2,298,611.21	Related to assets

Fund for white geese conservation project in West Anhui	200,000.00	80,000.00					280,000.00	Related to assets
Special protection fund for rare animals of white geese in West Anhui	460,000.00						460,000.00	Related to assets
Infrastructure construction subsidy for Tongling Huaren	2,514,581.25			134,928.75			2,379,652.50	Related to assets
Land return of Leting Liuhe Xinmeizi Food Co., Ltd.	12,040,000.00			840,000.00			11,200,000.00	Related to assets
Subsidy for recycling project of livestock and poultry manure treatment	2,940,000.00						2,940,000.00	Related to assets
Special subsidy for land use of Leting	3,293,559.58			74,430.72			3,219,128.86	Related to assets
Special subsidy for land use of Weifang	5,465,575.93			122,363.64			5,343,212.29	Related to assets
Hainan Chengmai laboratory reconstruction subsidy	79,775.21						79,775.21	Related to assets

Special subsidy for pig feedof Hainan Chengmai	18,866.30						18,866.30	Related to assets
Zunhua boiler treatment subsidy	112,000.16			15,999.96			96,000.20	Related to assets
Patent navigation project of chicken and pig gut health regulation and antibiotic replacement technology (special project)		150,000.00		113,207.54			36,792.46	Related to assets
National waterfowl technology system construction project (special project)		300,000.00		300,000.00				Related to earnings
R&Dof animal and poultry environment-friendly and healthy breeding mode and product (special		300,000.00		2,910.00			297,090.00	Related to assets
Annual Science and Technology Progress Award Fund in 2018		50,000.00					50,000.00	Related to assets

Land return of Fuxin Liuhe Agriculture and Animal Husbandry Co., Ltd.		5,530,000.00		48,938.04			5,481,061.96	Related to assets
In total	289,061,565.64	29,322,490.26		29,449,488.88		3,409,140.15	285,525,426.87	

Other instructions:

Companies are required to comply with the disclosure requirements of *Shenzhen Stock Exchange Industry Information Disclosure Guidelines No. 1-Listed Companies Engaged in Livestock and Poultry and Aquaculture Related Business*.

33. Capital stock

Unit: Yuan

	Opening balance	This change increases or decreases (+, -)					Final balance
		Issue new share	Sending shares	Conversion of provident fund into stock	Other	Subtotal	
Total number of shares	4,216,015,009.00						4,216,015,009.00

34. Capital reserve

Unit: Yuan

Project	Opening balance	Increase in this period	Decrease in this period	Final balance
Capital premium (stock premium)	813,348,367.82	49,325,618.17		885,128,376.31
Other capital reserve	1,624,310,000.16	22,454,390.32	1,847,835.75	1,644,916,554.73
Including: other equity changes of investee	1,621,765,875.57		1,847,835.75	1,619,918,039.82
Non-cash donate reserve	2,544,124.59			2,544,124.59
Other		22,454,390.32		22,454,390.32
In total	2,437,658,367.98	71,780,008.49	1,847,835.75	2,507,590,540.72

Other explanations, including the changes in the current period and the reasons for the changes:

The increase of capital (share capital) premium in the current period is a net increase of 46,909,455.84 Yuan of capital reserve affected by changes in minority equity in the current year, and 2,416,162.33 Yuan of capital reserve affected by stock equity incentive.

The increase of other capital reserve in the current period is the capital reserve of 22,454,390.32 Yuan included in the owner's equity in

the share-based payment of the company's equity incentive. The decrease in the current period is the part of the capital reserve change of Minsheng Bank calculated by equity method, which is enjoyed by the company according to the shareholding ratio.

35. Inventory stock

Unit: Yuan

Total	2,201,906,114.80	198,872,196.15	0.00	2,400,778,310.95

A description of the surplus reserve, including the changes in the current period and the reasons for the changes:

The increase of surplus reserve in the current period includes the amount withdrawn at 10% of the net profit of the parent company and the share of the parent company in the withdrawal of 10% of the net profit of each subsidiary. The decrease of the surplus reserve is the share of the company with the decrease of the subsidiary when disposing the subsidiary, and 300,444.79 Yuan at the beginning of the year affected by the implementation of the new financial instruments standard adjustment.

38. Undistributed profit

Unit: Yuan

Project	Current period	Previous period
Undistributed profit at the end of the previous period before adjustment	12,997,313,375.41	12,480,739,193.39
Total number of undistributed profits at the beginning of the adjustment period (increase +, decrease -)	-31,138,927.47	-361,020,420.23
Adjust the initial undistributed profit in the later period	12,966,174,447.94	12,119,718,773.16

Plus: net profit attributable to the owner of the parent company for the current period	5,041,999,768.06	1,704,646,781.14
Less: withdrawal of statutory surplus reserve	198,864,436.40	194,649,927.54
Dividends payable on common shares	124,285,434.57	632,402,251.35
Other comprehensive income carried-over retained earnings	94,838,132.73	
Undistributed profit at the end of the period	17,590,186,212.30	12,997,313,375.41

Details of undistributed profits at the beginning of the adjustment period:

- 1). Due to the retroactive adjustment of the *Accounting Standards for Enterprises* and its related new regulations, the undistributed profit of -31,138,927.47 Yuan at the beginning of the period is affected.
- 2). Due to the change of accounting policy, the undistributed profit 0.00 Yuan at the beginning of the period is affected.
- 3). Due to the correction of major accounting errors, the undistributed profit 0.00 Yuan at the beginning of the period is affected.
- 4). The change in the scope of the merger caused by the same control affects the undistributed profit 0.00 Yuan at the beginning of the period.
- 5). Other adjustments add up to affect the amount of 0.00 Yuan undistributed profits at the beginning of the period.

Decrease in operating receivables (increase with "-" sign)	-824,945,947.59	137,901,574.67
Increase in operating payables (reduced with "-" sign)	3,316,188,153.20	523,309,819.45
Net cash flow from operating activities	4,436,893,031.04	3,336,986,800.09
2. Major investment and fund-raising activities that do not involve cash receipts and payments:	--	--
3. Net changes in cash and cash equivalents:	--	--
The final balance of cash	5,692,332,240.91	5,370,971,251.78
Less: the opening balance of cash	5,370,971,251.78	3,025,665,980.78
Net increase in cash and cash equivalents	321,360,989.13	2,345,305,271.00

(2) Net cash of acquired subsidiaries paid in the current period

Unit: Yuan

	Amount
Cash or cash equivalents paid in the current period when a business merger occurs in the current period	845,790,087.00
Among them:	--
Weinan Zhengneng Agriculture and Animal Husbandry Technology Co., Ltd.	109,640,000.00
Dong'a New Hope Modern Agricultural Development Co., Ltd.	4,000,000.00
Shaanxi Zhongshan Xingwang Agriculture and Animal Husbandry Technology Co., Ltd.	44,500,000.00

Laiyang New Animal Husbandry Co., Ltd.	523,400,000.00
Hengnan Muyun Ecological Agriculture Co., Ltd.	1,000,000.00
Zhengzhou Quansheng Agriculture and Animal Husbandry Technology Co., Ltd.	128,250,000.00
Xianyang Yongxiang Agricultural Technology Co., Ltd.	35,000,087.00
Minus: cash and cash equivalents held by the company on the date of purchase	10,531,326.46
Among them:	--
Weinan Zhengneng Agriculture and Animal Husbandry Technology Co., Ltd.	114,325.16
Dong'a New Hope Modern Agricultural Development Co., Ltd.	
Shaanxi Zhongshan Xingwang Agriculture and Animal Husbandry Technology Co., Ltd.	
Laiyang New Animal Husbandry Co., Ltd.	4,739.01
Hengnan Muyun Ecological Agriculture Co., Ltd.	
Zhengzhou Quansheng Agriculture and Animal Husbandry Technology Co., Ltd.	
Xianyang Yongxiang Agricultural Technology Co., Ltd.	10,412,262.29
Among them:	--
Net cash paid by obtaining the subsidiaries	835,258,760.54

Other instructions:

(3) Net cash received for disposal of subsidiaries in the current period

Unit: Yuan

	Amount
Current disposal of cash or cash equivalents received by subsidiaries in the current period	53,964,771.95
Among them:	--
Guangdong Xinhao Zhenghe Agriculture and Animal Husbandry Co., Ltd.	19,800,000.00
Fengshun New Nope Biotechnology Co., Ltd.	9,900,000.00
Jiangxi Lianhe Agriculture and Animal Husbandry Development Co., Ltd.	20,464,771.95
Dezhou Liuhe Guoli Feed Co., Ltd.	3,800,000.00
Minus: cash and cash equivalents held by the company on the date of loss of control	38,038,492.28

Among them:	--
Guangdong Xinhao Zhenghe Agriculture and Animal Husbandry Co., Ltd.	4,269,094.37
Fengshun New Nope Biotechnology Co., Ltd.	
Jiangxi Lianhe Agriculture and Animal Husbandry Development Co., Ltd.	25,100,326.79
Dezhou Liuhe Guoli Feed Co., Ltd.	8,669,071.12
Among them:	--
Disposal of net cash received by subsidiaries	15,926,279.67

Other instructions:

Note: Among the above-mentioned companies, the net cash received by Jiangxi Lianhe Agriculture and Animal Husbandry Development Co., Ltd. is -4,635,554.84 Yuan, and the net cash received by Dezhou Liuhe Guoli Feed Co., Ltd. is 4,869,071.12 Yuan, which is transferred into the "payment of other cash related to investment activities" project according to the provisions of the standards; the amount presented in the project is 25,430,905.63 Yuan.

(4) Composition of cash and cash equivalents

Unit: Yuan

Project	Final balance	Opening balance
I. Cash	5,692,332,240.91	5,370,971,251.78
Among them: Cash on hand	6,983,790.62	8,514,422.75
A bank deposit that can be used for payment at any time	5,352,809,447.26	4,942,672,942.89
Other monetary funds that can be used for payment at any time	332,539,003.03	419,783,886.14
III. Balance of cash and cash equivalents at the end of the period	5,692,332,240.91	5,370,971,251.78
Among them: Use of restricted cash and cash equivalents by parent companies or subsidiaries within the group	84,847,337.96	79,899,407.48

Other instructions:

57. Statement of changes in owner's equity item notes

Explain the name of the "other" project and the adjusted amount of the balance at the end of the previous year:

Items not to be specified in the Statement of Changes in Owner's Equity

58. Assets with restricted ownership or use rights

Unit: Yuan

Project	Final book value	Limited reasons
Monetary fund	84,847,337.96	Futures purchase, guarantee company deposit, etc.
Inventory	34,517,671.76	Used as collateral for short-term loans
Fixed assets	78,122,866.89	Used as collateral for long-term and short-term loans
Intangible assets	28,106,890.21	Used as collateral for long-term and short-term loans
Long term equity investment	71,120,000.00	Other instructions (2)
Total	296,714,766.82	--

Other instructions:

(1) The company uses the land of its subordinate companies in Nepal, New Hope Liuhe Co., Ltd., Anhui Xinhua Co., Ltd., Yangling Benxiang fattening Pig Co., Ltd., Beijing Qianxihe Co., Ltd., Singapore Biotechnology Co., Ltd. as collateral for long-term and short-term loans, with a total mortgage loan equivalent to 31,472,480,000.00 Yuan.

(2) Tibet Xinhao Technology Co., Ltd., a subsidiary of the company, takes the capital contribution of 71,120,000.00 Yuan to Kangping Xinwang Farming and Animal Husbandry Co., Ltd. as the pledge, providing equity pledge guarantee for Kangping Xinwang to finance 200,000,000.00 Yuan from CDB Sichuan branch.

60. Government subsidy

(1) Basic situation of government subsidy

Unit: Yuan

Types	Amount	Presentation of items	The amount included in the profits and losses of the current period
-------	--------	-----------------------	---

Research on Comprehensive Prevention and Control of Major Infectious Diseases in Poultry and Construction Project of International Cooperation platform	82,800.00	Deferred Income	279,575.37
Technical Integration and demonstration Project of equipment Development for Environmental Control facilities in Waterfowl House	146,000.00	Deferred Income	50,713.84
Regulation and Mechanism of Dietary composition and feeding system on the formation of healthy and High-quality Meat of Livestock and Poultry	119,840.00	Deferred Income	99,070.10
Subsidy for boiler retrofit of Qujing Guoxiong	54,000.00	Deferred Income	2,100.00
Xiangyang New Hope government Land preferential subsidy	3,280,402.00	Deferred Income	11,530.40
Project subsidy of Jiangmen Liuhe Engineering Technology Research and Development Center	160,650.00	Deferred Income	
Award and subsidy funds for the Construction of R & D institutions in Jiangmen Liuhe large-scale Industrial Enterprises	485,129.00	Deferred Income	
Funds for supporting scientific and technological development in Jiangmen Liuhe and 2019	137,700.00	Deferred Income	
Linyi breeding pig government subsidy for tank tricycles	29,600.00	Deferred Income	
Linyi breeding pig government fermentor subsidy	79,340.00	Deferred Income	
Subsidy for Junan breeding Pig Huang-Huai-Hai Project	195,000.00	Deferred Income	
Exhibition hall subsidy of Junan Breeding Pig Ridge Spring Farm	599,999.98	Deferred Income	30,001.37
Yanting Xinhao Qingshui subsidy	200,000.00	Deferred Income	15,003.00
Longkou breeding pigs breeding sows subsidy	600,000.00	Deferred Income	50,000.00
Subsidies for large-scale biogas projects in Yanting	93,750.00	Deferred Income	12,500.00
Subsidy for resource utilization project of new good manure treatment in Yanting	1,220,000.00	Deferred Income	59,168.00
Huanghua Xinhao Industrial Development Fund	900,000.00	Deferred Income	
New Hope Agriculture and Animal Husbandry "Sichuan Shift Project" innovative talents individual Project funding	264,264.46	Deferred Income	

Yangling Benxiang produces 20,000 tons of bagged organic fertilizer and 10,000 tons of liquid fertilizer annually.	800,000.00	Deferred Income	40,000.00
Intelligent central kitchen industry public supply chain payment platform	135,000.00	Deferred Income	
Research and Development and demonstration Project of complete sets of equipment for Chinese automatic Central Kitchen	185,000.00	Deferred Income	
Subsidy for Jiaxiang refrigerated modern efficient Animal Husbandry Development Project	650,000.00	Deferred Income	43,333.38
Jiaxiang refrigerated strong County Xing Village subsidy	2,680,000.00	Deferred Income	47,196.00
Subsidy for boiler retrofit in Jinshan, Dezhou	80,000.00	Deferred Income	5,600.00
Subsidy for technical transformation of fixed assets in 2018	1,862,000.00	Deferred Income	139,650.03
Funds for industrial development-- deep processing of agricultural products	1,000,000.00	Deferred Income	101,562.51
Big data optimized recycling system of high efficiency bacteria and algae wastewater and demonstration of resistant Feed products	360,000.00	Deferred Income	166,356.56
Guangdong Province Modern Agricultural Industry Technology System Innovation team Construction (Feed Industry) Project	50,000.00	Deferred Income	
Animal husbandry science and technology floating plan	750,000.00	Deferred Income	1,000,000.00
Zhuge Elite Plan	600,000.00	Deferred Income	
Southwest University for Nationalities Grant	144,600.00	Deferred Income	
Special fund for western talent project	700,000.00	Deferred Income	
Fixed assets subsidy of Zhengzhou Quansheng Breeding Farm	2,625,000.00	Deferred Income	
Hongyuan Yak slaughtering production Line running water project	650,000.00	Deferred Income	
Demonstration and popularization of foot-and-mouth disease purification in Pig breeding Farm	34,340.00	Deferred Income	83,037.99
Key technology integration and industrial demonstration project with an annual output of 3000 tons of marine agricultural biological products	510,000.00	Deferred Income	999,931.04
Research and demonstration of key techniques for healthy, efficient and environmentally friendly breeding of meat duck	25,274.82	Deferred Income	304,680.76

Study on immune program of classical swine fever and pseudorabies in large-scale pig farm (Special)	122,800.00	Deferred Income	150,197.00
"China-EU Intergovernmental Cooperation Project"-EU Horizon SFS-46-2017 (special)	300,000.00	Deferred Income	164,953.51
Funds for West Anhui White Goose Conservation Project	80,000.00	Deferred Income	
Patent navigation project of chicken and Pig intestinal health Regulation and antibiotic substitution Technology (Special)	150,000.00	Deferred Income	113,207.54
National Waterfowl Technology System Construction Project (Special)	300,000.00	Deferred Income	300,000.00
Livestock and Poultry Environmental Protection and Healthy Breeding Model and Product Research and Development (Special)	300,000.00	Deferred Income	2,910.00
Award funds for Scientific and Technological Progress in 2018	50,000.00	Deferred Income	
Land refund of Fuxin Liuhe Agriculture and Animal Husbandry Co., Ltd.	5,530,000.00	Deferred Income	48,938.04
Financial subsidy	12,275,067.17	Other income	12,275,067.17
Subsidies for agricultural development projects	4,890,139.00	Other income	4,890,139.00
Energy saving and environmental protection subsidy	942,579.46	Other income	942,579.46
Funds for the promotion of external trade and economic cooperation	3,820,000.00	Other income	3,820,000.00
Science and technology innovation fund		Other income	0.00
Special subsidy funds for production support	2,404,508.13	Other income	2,404,508.13
Various rewards	4,257,489.00	Other income	4,257,489.00
Tax return	6,689,228.56	Other income	6,689,228.56
Deferred income amortization-assets	21,831,576.58	Other income	21,831,576.58
Deferred income amortization-earnings	3,296,695.86	Other income	3,296,695.86
Subsidy for introduction and breeding sows	350,000.00	Other income	350,000.00
Social insurance and employment subsidy	2,831,380.03	Other income	2,831,380.03
Harmless disposal subsidy	4,856,449.88	Other income	4,856,449.88
Subsidies for frozen meat and other reserve materials	15,496,116.26	Other income	15,496,116.26
Subsidy for diseased pigs		Other income	0.00
Subsidy Funds for Pure Land Health Industry in 2016		Other income	0.00
Demolition subsidy	971,017.96	Other income	971,017.96
Science and technology subsidy	1,635,000.00	Other income	1,635,000.00
Scale enterprise subsidy	170,000.00	Other income	170,000.00
Funds for national information industrialization workstation	3,710,000.00	Other income	3,710,000.00

Subsidy for demonstration projects of modern technology development and integration	150,000.00	Other income	150,000.00
Special subsidy for refrigeration project	100,000.00	Other income	100,000.00
Funds to support the development of science and technology	150,000.00	Other income	150,000.00
Special funds for Patent implementation and Promotion	17,200.00	Other income	17,200.00
Subsidies for pig breeding and slaughtering for prevention and control of classical swine fever in Africa	4,082,612.00	Other income	4,082,612.00
Workshop digitization subsidy	400,000.00	Other income	400,000.00
Industrial development fund	580,000.00	Other income	580,000.00
Pig breeding subsidy	4,319,090.00	Other income	4,319,090.00
Sichuan Agriculture and Animal Husbandry + Provincial merger and reorganization project	1,840,000.00	Other income	1,840,000.00
Patent subsidy	612,100.00	Other income	612,100.00
Steady post subsidy	4,713,535.54	Other income	4,713,535.54
Other	1,442,012.88	Other income	1,442,012.88
Total	138,156,288.57		113,155,014.75

(2) Return of government subsidy

Note: Zhengzhou Quansheng Agriculture and Animal Husbandry Technology Co., Ltd. purchased this year includes a wholly-owned subsidiary of Ruzhou Quansheng Agriculture and Animal Husbandry Technology Co., Ltd.; Weinan Zhengneng Agriculture and Animal Husbandry Technology Co., Ltd. acquired this year includes a wholly-owned subsidiary of Heyang Zhenghe Modern Animal Husbandry Co., Ltd.

(2) Combined cost and goodwill

Unit: Yuan

Combined cost	Shaanxi Zhongshan Xingwang Agriculture and Animal Husbandry Technology Co., Ltd.	Laiyang Xinmu Breeding Co., Ltd.	Hengnan County Muyun Ecological Agriculture Co., Ltd.	Zhengzhou Quansheng Agriculture and Animal Husbandry Technology Co., Ltd.	Weinan Zhengneng Agriculture and Animal Husbandry Technology Co., Ltd.	Donga County New Hope Modern Agricultural Development Co., Ltd.	Xianyang Yongxiang Agricultural Technology Co., Ltd.
--Cash	44,500,000.00	648,700,000.00	10,800,000.00	135,000,000.00	125,000,000.00	4,000,000.00	35,000,087.00
Total combined cost	44,500,000.00	648,700,000.00	10,800,000.00	135,000,000.00	125,000,000.00	4,000,000.00	35,000,087.00
Less: fair value share of identifiable net assets obtained	44,500,000.00	397,328,400.00	10,800,000.00	36,650,600.95	105,079,878.03	4,000,000.00	37,974,537.36
Goodwill / merger cost less than the fair value share of identifiable net assets acquired		251,371,600.00		98,349,399.05	19,920,121.97		-2,974,450.36

The method for determining the fair value of the combined cost, and the description of the contingent consideration and its changes:

The main reasons for the formation of large goodwill:

The formation of goodwill is caused by the difference between the cost of the merger and the fair value share of the identifiable net assets acquired by the purchaser in the merger.

Other instructions:

The method for determining the fair value of identifiable assets and liabilities:

Contingent liabilities of the acquiree in a business merger:

Other instructions:

Xianyang Yongxiang Agricultural Technology Co., Ltd., which originally held 51% of the shares in the company, but it was stipulated in the investment agreement at that time that "the expenditure of more than 500000 Yuan shall be agreed by the shareholders". The company and another shareholder of Xianyang Yongxiang jointly control Xianyang Yongxiang, which is a joint venture of the company. Only after the acquisition of 49% of the shares of the company this year did the company control the company and began to compile the company's statements after October 31, the date of the merger.

(4) Gains or losses arising from the re-measurement of equity held before the date of purchase according to fair value

Is there a transaction in which the merger is achieved step by step through multiple transactions and control is obtained during the reporting period?

Yes No

(5) The date of purchase or the statement of the fair value of the identifiable assets and liabilities of the purchaser that the consolidated consideration or the fair value of the identifiable assets and liabilities cannot be reasonably determined at the end of the current period.

(6) Other notes

2. Disposal of subsidiary companies

Is there a situation in which a single disposal loses control over the investment of a subsidiary?

Yes No

Unit: Yuan

Subsidiary name	Equity disposal price	Proportion of equity disposal	Equity disposal mode	The point at which control is lost	The basis for determining the time point of loss of control	The difference in the share of the subsidiary's net assets at the level of the consolidated financial statements corresponding to the disposal price and the disposal investment	Proportion of remaining equity on the date of loss of control	Book value of remaining equity at the date of loss of control	Fair value of remaining equity at the date of loss of control	The gain or loss arising from the remaining equity is re-measured according to fair value	The determination method and the Fair value of residual Equity on the date of loss of Control	The amount of other comprehensive income related to the company's equity investment transferred to profit and loss
Dezhou Liuhe Guoli Feed Co., Ltd.	3,800,000.00	52.00%	Transfer	July 16, 2019	Industrial and commercial change	-1,589,581.12						

Guangdong Xinhao Zhenhe Agriculture and Animal Husbandry Co., Ltd	19,800,000.00	99.00%	Transfer	May 27, 2019	Industrial and commercial change	-4,226,737.50						
Fengshun New Hope Biotechnology Co., Ltd.	9,900,000.00	99.00%	Transfer	April 30, 2019	Industrial and commercial change	3,456,442.85	1.00%	65,086.44	65,086.44			

Jiangxi Lianhe Agriculture and Animal Husbandry Development Co., Ltd.	21,056,771.61	55.00%	Transfer	April 30, 2019	Industrial and commercial change	880,431.42						
---	---------------	--------	----------	----------------	----------------------------------	------------	--	--	--	--	--	--

Other instructions:

Jiangxi Lianhe Agriculture and Animal Husbandry Development Co., Ltd., a subsidiary disposed of this year, includes two subsidiaries.

Is there a situation in which the investment in the subsidiary is disposed of step by step through multiple transactions and the control is lost in the current period?

Yes No

3. Changes in the scope of mergers for other reasons

Explain the changes in the scope of the merger caused by other reasons (for example, newly established subsidiaries, liquidation subsidiaries, etc.) and their related information:

(1) Newly established subsidiaries in this period:

Subsidiary name	Net assets at the end of the period	Current net profit
Sichuan New Hope Liuhe Science and Technology Innovation Co., Ltd.	998,453.25	-1,546.75

(7) Unconfirmed commitments related to the investment of the cooperative enterprise

The company does not have any unconfirmed commitments related to the investment of the cooperative enterprise.

(8) Contingent liabilities related to the investment of a cooperative enterprise or joint venture

The company has no contingent liabilities related to the investment of the cooperative enterprise or joint venture.

4. Interests in structured subjects those are not included in the consolidated financial statements

Relevant description of structured subjects that are not included in the scope of the consolidated financial statements:

5. Other

X. Risks associated with financial instruments

The Company's main financial instruments include monetary funds, accounts receivable, notes receivable, interest receivable, dividends receivable, other receivables, other current assets, transactional financial assets and available-for-sale financial assets, accounts payable, interest payable, notes payable, employee remuneration payable, dividends payable, other payables, short-term loans, transactional financial liabilities, non-current liabilities due within one year, long-term loans, bonds payable and long-term payables. Details of the various financial instruments have been disclosed in the relevant notes. In order to reduce the risks related to financial instruments, the Company has formulated corresponding risk management policies and set up corresponding posts or functional departments to ensure the effective implementation of risk management objectives and policies; management manages and monitors these exposures to ensure that the above risks are controlled within a limited scope.

1. Credit risks

Credit risk refers to the risk that one party of a financial instrument fails to perform its obligations and causes financial losses to the other party. The company is mainly faced with customer credit risk caused by credit sales. Before signing a new contract, the company will assess the credit risk of new customers, including external credit ratings and bank creditworthiness certificates in some cases (when this information is available). The company sets a credit limit for each customer, which is the maximum amount that does not require additional approval.

2. Market risk

The market risk of financial instruments refers to the risk that the fair value of financial instruments or future cash flow fluctuates due to market price changes, including foreign exchange risk, interest rate risk and so on.

3. Interest rate risk

The bank borrowing of the Company at the end of the period is mainly at a fixed interest rate, and only a small amount of short-term loans and some long-term loans are floating interest rates, but the interest rate does not change much, so the change in the interest rate has a limited impact on the Company.

4. Foreign exchange risk

The company invests and operates in several countries in Asia, Africa and Europe, and the income currencies are all in local currencies, and the fluctuations in the exchange rates of these currencies and RMB will affect the company's overseas income and profits; the company has carried out US dollar financing through the Singapore platform for the investment and operation of overseas operating companies, and exchange gains or losses will be brought about by exchange rate fluctuations between the US dollar and overseas local currencies. In addition, the currency of raw materials purchased by overseas operating companies is mainly US dollars, and the exchange rate fluctuations between the US dollar and the local currency will lead to changes in procurement costs. The company has set up a special exchange rate management team on the Singapore platform to manage exchange rate fluctuations among relevant currencies and track the impact of exchange rate changes on operating performance. and through natural hedging and the purchase of financial derivatives to manage exchange risk.

5. Liquidity risk

Liquidity risk refers to the risk of a shortage of funds when an enterprise fulfills its obligation to pay cash or other financial assets. It is the company's policy to ensure that there is sufficient cash to repay the maturing debt. Liquidity risk is centrally controlled by the company's financial department. The finance department ensures that the company has sufficient funds to repay its debt in all reasonable circumstances by monitoring cash balances, readily realizable securities and rolling forecasts of cash flows over the next 12 months.

XI. Disclosure of fair value**1. End-of-period fair value of assets and liabilities measured at fair value**

Unit: Yuan

Project	Fair value at the end of the term			
	Fair value measurement at the first level	The second level of fair value measurement	The third level fair value measurement	Total
I. Continuous fair value measurement	--	--	--	--
(I) Transactional financial assets	4,594,255.65			4,594,255.65

1. Financial assets measured at fair value and whose changes are included in the profits and losses of the current period	4,594,255.65			4,594,255.65
(3) Derivative financial assets	4,594,255.65			4,594,255.65
(III) Investment in other equity instruments			318,276,827.48	318,276,827.48
Total assets continuously measured at fair value	4,594,255.65		318,276,827.48	322,871,083.13
(VI) Transactional financial liabilities	5,240,664.99			5,240,664.99
Derivative financial liabilities	5,240,664.99			5,240,664.99
Total liabilities continuously measured at fair value	5,240,664.99			5,240,664.99
II. Unsustainable fair value measurement	--	--	--	--

2. The basis for determining the market price of sustainable and non-sustainable fair value measurement projects at the first level

Derivative financial assets in transactional financial assets are futures contracts and interest rate swaps purchased, which are confirmed according to the final quotation provided by the futures trading center.

3. Continuous and non-sustainable fair value measurement items at the third level, valuation techniques adopted and qualitative and quantitative information of important parameters

The investment of other equity instruments measured at the third level of fair value of the Company is the equity of the unlisted company held by the Company. The operating environment, operating conditions and financial situation of the invested enterprise have not changed significantly, so the company is measured according to the investment cost as a reasonable estimate of the fair value.

XII. Related parties and related transactions

1. The situation of the parent company of this enterprise

Name of parent company	Place of registration	Nature of business	Registered capital	The shareholding ratio of the parent company to the enterprise	The proportion of voting rights of the parent company to its own enterprise
New Hope Group Co., Ltd.	Chengdu	Administration	800,000,000	24.86%	24.86%
Southern Hope Industrial Co., Ltd.	Tibet Lhasa	R & D, wholesale and resale	1,034,313,700	29.21%	29.21%

A description of the parent company of the enterprise

The controlling shareholder of Southern Hope Industrial Co., Ltd., the largest shareholder of the company, is New Hope Group Co., Ltd., the second largest shareholder of the company, so the controlling shareholder of the company is New Hope Group Co., Ltd., and the actual control of New Hope Group Co., Ltd. is Yonghao Liu, so the final actual controller of the company is Yonghao Liu.

The ultimate controller of this enterprise is New Hope Group Co., Ltd.

Other instructions:

2. The situation of the subsidiaries of the enterprise

The details of the subsidiaries of this enterprise can be found in note 9 and (1) 1 the composition of the enterprise group.

3. The situation of cooperative enterprises and joint ventures
