

Management's Discussion and Analysis

For the Three and Nine Months Ended December 31, 2010

The following management discussion and analysis of Zenyatta Ventures Ltd. ("Zenyatta" or the "Corporation") is intended to provide investors with a reasonable basis for assessing the financial performance of the Corporation as well as certain forward looking statements relating to its potential future performance. The information should be read in conjunction with Zenyatta's December 31, 2010 unaudited and March 31, 2010 audited annual financial statements, and the related notes for the periods then ended which have been prepared in accordance with Canadian generally accepted accounting principles. Zenyatta's accounting policies are described in note 2 of the March 31, 2010 audited annual financial statements. All of the financial information presented herein is expressed in Canadian dollars, unless otherwise indicated. This management discussion and analysis is made as at February 25, 2011.

Additional information relating to the Corporation can be found under the Corporation's profile on SEDAR at www.sedar.com.

Forward Looking Statements

This MD&A of the Corporation contains certain forward-looking information and forward-looking statements, as defined in applicable securities laws (collectively referred to herein as "forward-looking statements"). These statements relate to future events or the Corporation's future performance. All statements other than statements of historical fact are forward-looking statements. Often, but not always, forward-looking statements can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "continues", "forecasts", "projects", "predicts", "intends", "anticipates" or "believes", or variations of, or the negatives of, such words and phrases or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors, which may cause actual results to differ materially from those anticipated, expressed or implied in such forward-looking statements.

Factors that could affect these statements include, without limitation, availability of financing and personnel, fluctuations in metal prices, future exploration and development programs, general business and economic conditions, social and political stability, security of title, timing and receipt of permits and licenses, the impact of changes in future legislation and regulations, changes in mining or environmental regulations, competition and currency fluctuations. The forward-looking statements in this MD&A speak only as of the date of this MD&A or as of the date specified in such statement.

Shareholders are cautioned not to place undue reliance on forward-looking information. The Corporation undertakes no obligation to update publicly or otherwise revise any forward-looking information whether as a result of new information, future events or other such factors which affect this information, except as required by law.

These factors and other risks and uncertainties are detailed in the Corporation's reports and disclosure documents filed by the Corporation from time-to-time with Canadian securities regulatory authorities.

Overview

The Corporation is a junior mineral exploration company focused primarily on mineral deposits in Northern Ontario, Canada. The Corporation is actively engaged in exploring mining projects and holds an interest in exploration licences on properties in the "Arc of Fire" area in Northern Ontario, Canada. The properties, located north of Lake Superior and west of James Bay in north-western Ontario, Canada, are unpatented, non-contiguous, and consist of 28 groups of claims, 468 claims and 7356 claim units, totalling 1176.96 km^2 and 117,696 hectares (the "Claims"). The Corporation's current objective is to focus on the exploration of the Claims.

The Corporation was registered and incorporated in Ontario, Canada as a numbered company on July 29, 2008. Pursuant to Articles of Amendment dated November 24, 2009, the Corporation changed its name to Zenyatta Ventures Ltd. On December 23, 2010, the Corporation became a reporting issuer in Ontario, Alberta and British Columbia. The common shares of the Corporation commenced trading on the TSX Venture Exchange under the symbol ZEN.

Overall Performance

During the nine month period ended December 31, 2010, the Corporation completed equity financings and continued exploration activities on the Claims. Overall during the period ended December 31, 2010, the Corporation raised $10,276,459 in share capital through its initial public offering and various private placements, and had expenditures of $1,739,803 consisting of deferred exploration costs, equipment purchase, and operating expenses.

The Corporation continued its exploration of the Claims which it began on March 10, 2010, by engaging Geotech to conduct an airborne electromagnetic geophysical survey on the Claims, and such exploration work was completed on June 30, 2010, pursuant to which the Corporation earned a 25% interest in the Claims. As at December 31, 2010, the Corporation had $1,898,259 in deferred exploration costs as a result of this survey, additional staking and exploration costs, and $340,000 worth of cash, shares and warrants given to Cliffs Canada in connection with the Amended Albany Agreement.

Results of Operations

Net loss

The Corporation recorded a loss of $502,824 with basic and diluted loss per share of $0.02 for the three month period ended December 31, 2010 (2009 - $Nil and $0.00). The loss for the nine month period ended December 31, 2010 was $869,658 with basic and diluted loss per share of $0.04 (2009 - $Nil and $0.00). As this is the first full year of operations of the Corporation, all comparative amounts or revenue and expenses will be $Nil.

Revenue

The Corporation is in the development stage and therefore did not have revenues from operations. Interest income for the three month period ended December 31, 2010 was $1,243 (2009 - $Nil). Interest income for the nine month period ended December 31, 2010 was $2,996 (2009 - $Nil).

Expenses

Stock based compensation costs were $379,957 for the three month period ended December 31, 2010 (2009 – $Nil) and $379,957 for the nine month period ended December 31, 2010 (2009 – $Nil). Stock based compensation was based on a fair value of $0.48 per option for the 2,275,000 options granted to directors, officers and employees in December 2010 as calculated using the Black-Scholes option pricing model. Stock based compensation is recognized over the vesting period of the underlying options.

General and administrative expenses were $172,866 for the three month period ended December 31, 2010 (2009 – $Nil) and $289,907 for the nine month period ended December 31, 2010 (2009 – $Nil). The increase in general and administrative expenses in the third quarter is primarily the result of hiring directly as employees of the Corporation those staff whose services were previously included as contract and management services. This also explains why contract and management services were $Nil for the three month period ended December 31, 2010 (2009 – $Nil) and $212,338 for the nine month period ended December 31, 2010 (2009 – $Nil).

Stock exchange and filing fees were $51,007 for the three month period ended December 31, 2010 (2009 – $Nil) and $58,507 for the nine month period ended December 31, 2010 (2009 – $Nil). These fees were up in the third quarter as a result of the listing of the Corporation on the TSX Venture Exchange in December 2010.

Professional fees were $33,543 for the three month period ended December 31, 2010 (2009 – $Nil) and $94,571 for the nine month period ended December 31, 2010 (2009 – $Nil). These fees consist primarily of the amounts charged for services provided by the Corporation's lawyers, auditors, and accountants.

Investor relations and promotion expenses were $14,079 for the three month period ended December 31, 2010 (2009 – $Nil) and $39,573 for the nine month period ended December 31, 2010 (2009 – $Nil). These expenses consist primarily of the costs of marketing trips and other costs such as attending industry conferences.

Consulting fees were $4,000 for the three month period ended December 31, 2010 (2009 – $Nil) and $4,000 for the nine month period ended December 31, 2010 (2009 – $Nil). These fees consist primarily of the amounts charged for services provided by the Corporation's CFO.

Amortization expense was $715 for the three month period ended December 31, 2010 (2009 – $Nil) and $1,101 for the nine month period ended December 31, 2010 (2009 – $Nil). Amortization is taken on the capitalized cost of the Corporation's equipment.

The future income tax recovery was $152,100 for the three month period ended December 31, 2010 (2009 – $Nil) and $207,300 for the nine month period ended December 31, 2010 (2009 – $Nil). The future income tax recovery relates to the excess of book values over tax values of the Corporation's share issue costs and the Corporation's interest in mineral properties and deferred exploration costs.

Mineral Exploration Activities

Interest in mineral properties and exploration costs capitalized were $6,400 for the three month period ended December 31, 2010 (2009 – $Nil) and $1,323,638 for the nine month period ended December 31, 2010 (2009 – $Nil), which all relate to the Albany Project. Costs capitalized in the third quarter relate to contracted geological services.

Albany Project

During the year ended March 31, 2010, the Corporation signed an option agreement which was subsequently superseded and replaced effective November 2, 2010 (the "Albany Agreement"), to earn an interest in the Albany Property located in Northern Ontario. Under the terms of the Albany Agreement, the Corporation can acquire, upon exercise of the first option, a 25% interest in the Albany Property, and upon exercise of the second option, an additional 55% interest in the Albany Property. The first option was exercised after completion of a helicopter-borne geophysical survey on the property during the period ended June 30, 2010 and issuance of 1,000,000 Units to the option grantor during the period ended September 30, 2010, each unit being comprised of one common share and one warrant to purchase one additional common share at a price of $1.50 any time before December 23, 2015.

The second option can be exercised after making certain payments totaling $195,000 ($30,000 before July 1, 2010, (paid), and $55,000 on each of July 1, 2011, July 1, 2012, and July 1, 2013), incurring aggregate expenses on the property of not less than $10,000,000 before July 1, 2014. The Albany Agreement provides a clawback right that allows the optionor to reduce the Corporation's interest in the property to 30% subsequent to the exercise of the second option. The optionor is a significant shareholder of the Corporation.

The Albany Property is subject to payment of a 2.0% net smelter return royalty ("NSR"), which may be reduced to 1.0% upon payment of $1,000,000, and success fees of $250,000 upon commencement of the first pre-feasibility study and $500,000 upon commencement of each additional pre-feasibility study. The net smelter return royalty and the success fees are payable to a corporation controlled by the President, Chief Executive Officer and Director of the Corporation.

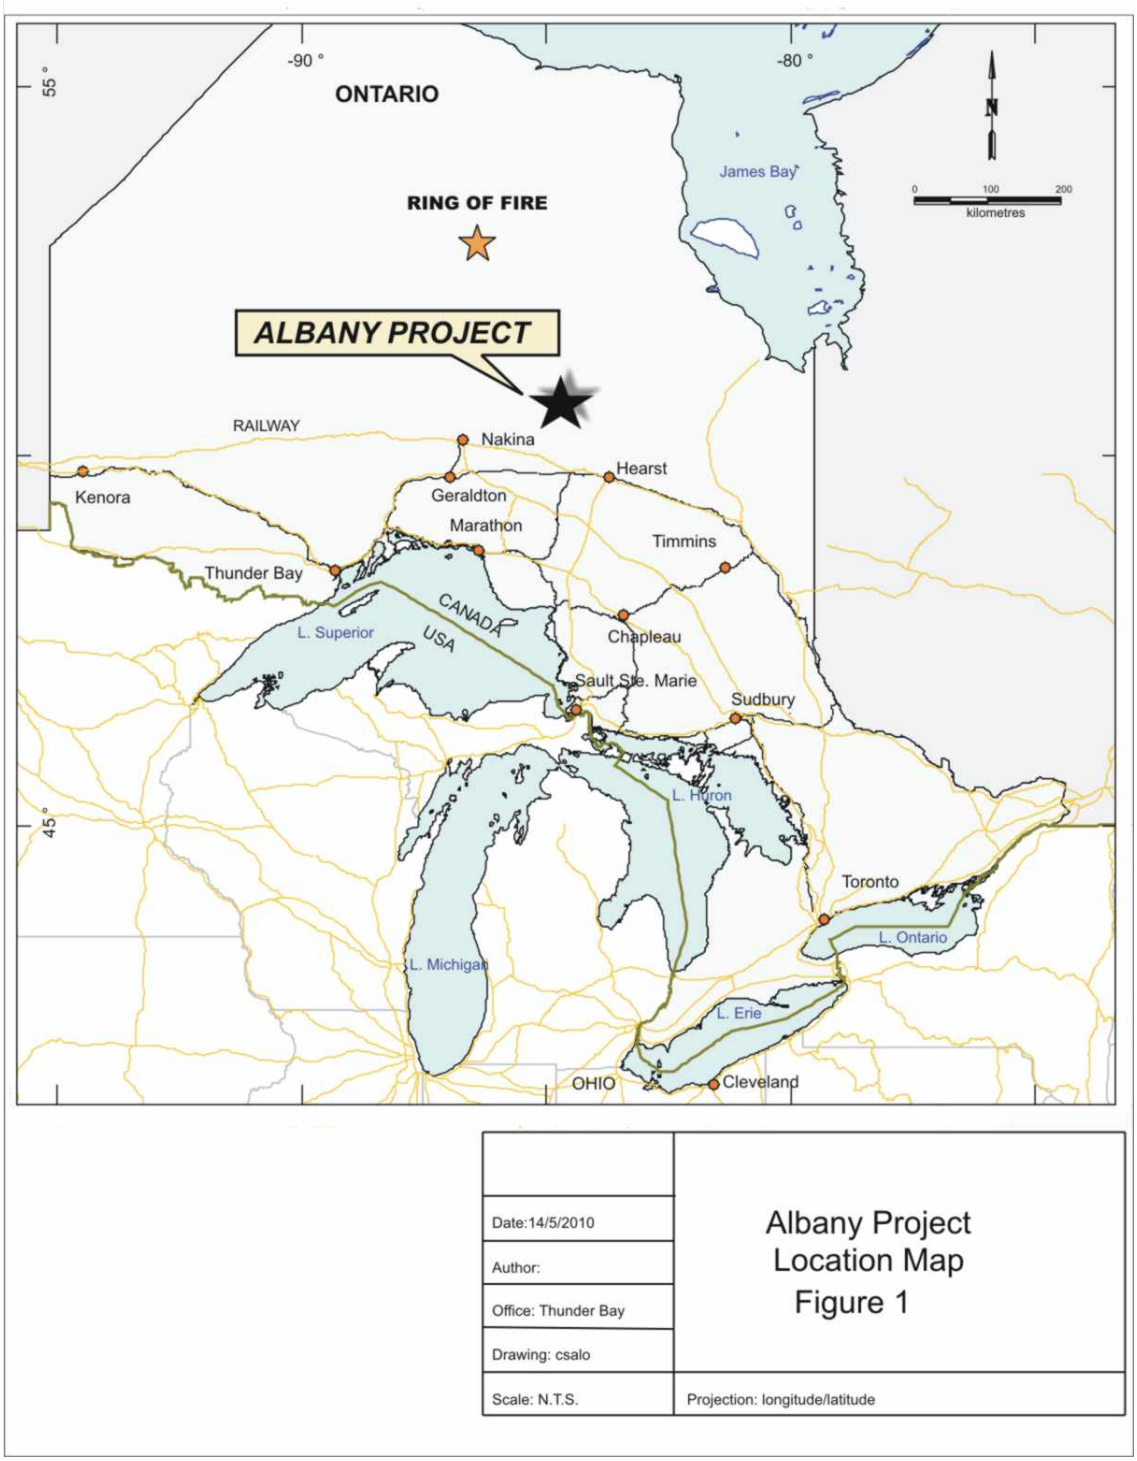

The following disclosure relating to the Albany Project has been derived from the report prepared for the Corporation by Jean M. Legault, M.Sc., P.Geo., of Geotech dated November 1, 2010, as amended on November 26, 2010, and entitled "*43-101 Technical Report on the Albany Project – Porcupine Mining District, Ontario NTS: 42K / 01, 02, 03, 07, 08, 09, 10, 14, 15, 16 - 42F / 15, 16 - 42N / 01, 02, 03, 04, 06 for Zenyatta Ventures Ltd.*" (the "Technical Report"). Mr. Legault, the author of the Technical Report, is a "qualified person" within the meaning of NI 43-101 and is independent of the Corporation. The Technical Report may also be reviewed under the Corporation's profile on the SEDAR website at www.sedar.com.

Project Description and Location

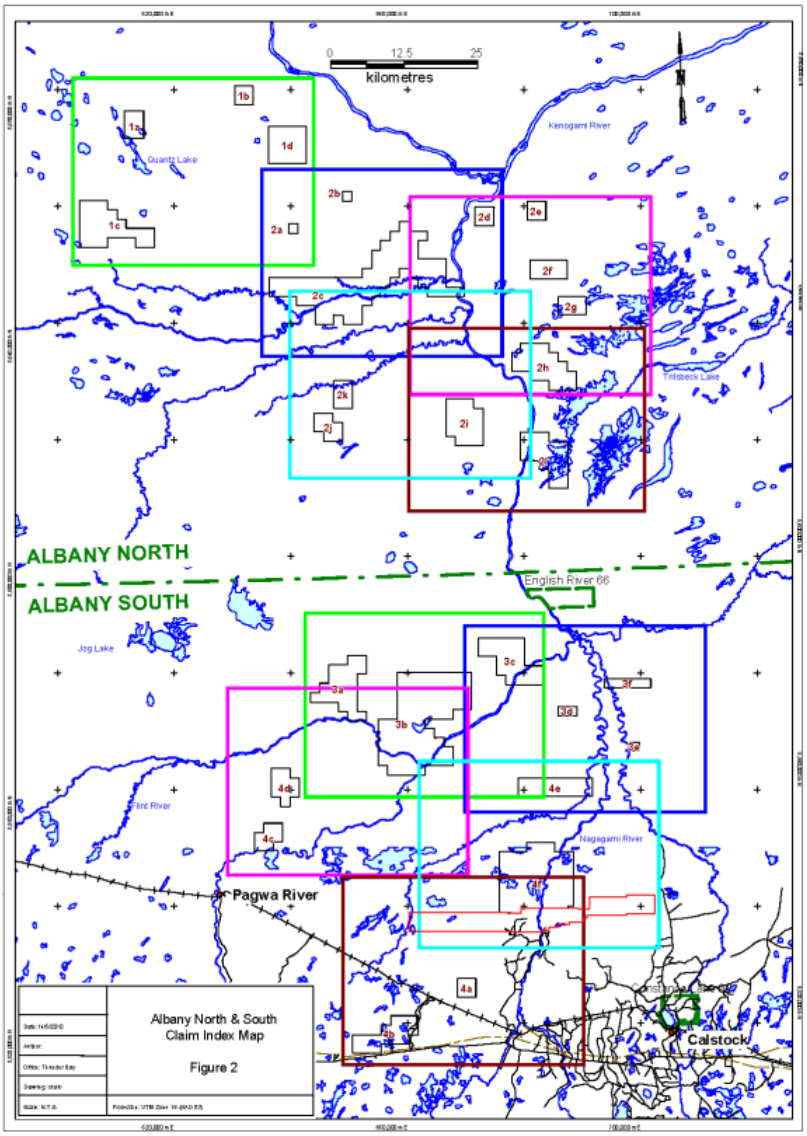

The Claims are located north of Lake Superior and west of James Bay in north-western Ontario, Canada. The southernmost claim block (4b) is approximately 86.5 km west of the town of Hearst, just north (0.46 km) of the Trans Canada Highway #11 (see Figures 1 and 2 below).

The majority of the Claims were staked during the late summer and fall of 2009, followed by additional staking in the winter and spring of 2010. The Claims are currently owned 25% by the Corporation and 75% by Cliffs Canada, and are registered in the name of Cliffs Canada.

A total of approximately $1,550,000 has been spent to date on a Geotech airborne EM geophysical survey that began in the field on March 20, 2010 and ended on May 19, 2010. Data processing and interpretation was complete on June 30, 2010. This amount will be filed with the MNDM. A total of $8,507,446 is proposed to be spent for a two phase exploration program that began in the fall of 2010 and continues into winter 2011. The Claims have not been the subject of a cadastral survey. Currently, there are no pending challenges to the title of the claims, and surface rights are owned by the Crown.

The Claims cover sections of ground that is reported to have been explored by eight exploration companies: Nagagami River Prospecting, Algoma Ore Properties, Satellite Metal Mines Limited, Keevil Mining, Cedam Limited, Shell Canada Explorations Limited, East-West Resource Corporation and Gowest Amalgamated Resources Limited. Presently, a numbered company "1518164 Ontario Incorporated" holds a group of claims adjacent to and south of the Claim block 4f.

There are no environmental liability issues related to previous exploration work on the Claims. The Corporation has not received from any government authority, any communication or notice concerning any actual or alleged breach of any environmental laws, regulations, policies or permits. There are no permits that must be acquired to conduct the proposed exploration work.

Accessibility, Climate, Local Resources, Infrastructure and Physiography

The Claims (28 non-contiguous groups) are located over a large area of twenty townships, with all claims blocks located within the Porcupine Mining District of Northern Ontario. The Claims are all located north of Highway 11 and the town of Hearst is situated approximately 86 km to the east of the southernmost Claim block, 4b (see Figure 1).

The Claims are situated within the Hudson Bay-James Bay Lowlands area where the topography is essentially flat, low-lying and swampy. Overburden is very thick in places with little or no outcrop exposure. The Kenogami River flows north in the eastern section of the map area with several meandering tributaries flowing in from the west. There are many creeks flowing between peat bogs throughout the area. Vegetation is dominated by wetlands, with some areas of spruce and alder trees, and cedar swamps. Spruce and alder trees are also abundant along the banks of the Nagagami River and other smaller rivers.

The Claims are located in a remote area of Northern Ontario. Access to most of the Claims can only be gained using float plane, helicopter and All-Terrain-Vehicle. Claim blocks 4a and 4b, located in the southern area can be accessed from Highway 11. Some of the Claims located near the Kenogami River, or other rivers are accessible by boat or canoe. The town of Hearst, population of 5825, located 86 km east from claim block 4b, has many facilities to keep an exploration camp well supplied. Facilities include hotels, housing, hospitals, hardware stores, gas stations, and a local airport. Float plane and helicopter companies can also be found in Hearst.

The Claims are situated in Northern Ontario where there are different climates and weather extremes. Most of the region has a continental climate with warm to hot summers (June, July and August; 25^{o}C to 35^{o}C) and cold winters (December to March, 10 ^{o}C to -20 ^{o}C). Spring and autumn tend to be short seasons and have some of the weather of winter and summer. As a generalization, precipitation ranges from 600 mm to around 900 mm.

Surface exploration work can be carried out during the months of May to November, possibly later if there is no accumulation of snow. Additional exploration work (geophysical surveys and diamond drilling) can be conducted year-round.

History

The Claims cover large amounts of ground that has potential to host nickel, copper, and platinum group metal mineralization. The ground is underexplored and considered new frontier. The land staked by Cliffs Canada in 2009 and 2010 was selected based on geophysical information from Ontario Geological Survey airborne magnetic maps, the geological interpretation of those maps, and additional geological and geophysical data from the following historical exploration assessment reports:

Deposit Type

Mafic-ultramafic intrusion hosted Cu-Ni-PGM deposits range in age from Archean to Tertiary (mainly Archean and Proterozoic in Ontario), are stratabound, and host copper, nickel and/or platinum-group sulphides. These deposits generally occur in two types of cratonic settings: (1) as complexes related to flood basalts in an intracontinental rift environment; and (2) as large strataform complexes either sheet-like or dike-like. Host rocks include (commonly layered) norite, gabbro, quartz diorite, pyroxenite, amphibolite, diabase, peridotite, anorthosite, dunite, troctolite and harzburgite.

The principle mineralogy includes pentlandite, chalcopyrite, pyrrhotite, cubanite, and millerite. Other minerals may include pyrite, marcasite, valleriite, bornite, cobalt sulphides and sphalerite. PGMs may include sulphides, tellurides, arsenides, antimonides and alloys. Generally, the more mafic the composition, the higher the Ni/Cu ratio. The texture and style of the mineralization is disseminated, net textured, sulphide matrix breccia and massive sulphides that occur as stratabound to stratiform, tabular layers or lenses. The ore minerals are commonly located at or near the base of the host intrusion and sulphide veins and disseminations usually occur in the footwall rocks. PGM rich horizons generally occur at a significant distance above the base of the intrusion.

A geophysical anomaly for massive sulphides should be produced by an airborne or ground EM survey. Airborne and ground magnetic (“mag”) surveys may produce anomalies for pyrrhotite mineralization.

The Corporation is conducting exploration programs targeting nickel, copper, and platinum PGMs on the Claims. The Corporation has identified in the Claims a highly prospective 'new frontier' containing a vast underexplored area referred to as the Albany Project or "Arc of Fire" in the James Bay Lowlands. The area has been largely ignored in the past as a result of swamp and the younger Phanerozoic (460-360 Ma) cover rocks, up to 200m thick, overlying the prospective Archean rocks. Recent advances in airborne EM technology have allowed deeper penetration/resolution through the Fe-deficient shallow marine carbonate/clastic sediments to target favourable geological and structural settings within the underlying Archean.

The "Arc of Fire" consists of several large multi-phased mafic-ultramafic-alkalic complexes forming an arc line approximately 150km long. One of these complexes, called the Nagagami River Alkaline Ring Complex, shows similarities to the Mid-Continent Rift related Coldwell Complex on the north shore of Lake Superior. The "Arc of Fire" is believed to also represent a deep seated Proterozoic structure that may be related to the 1.1 billion year old Mid-Continent Rifting. The Mid-Continent Rift is a known deep seated structural environment that hosts a number of significant mineral deposits around Lake Superior, including the recently discovered Rio Tinto's Eagle and Tamarack Cu-Ni deposits and Magma's TBN PGM deposit. Rifting environments around the world are host to many large mineral deposits due to a tapping of the copper-nickel rich mantle by way of the structural conduits and traps for metal transport and deposit.

The Corporation will be targeting a Cu-Ni deposit at the Albany Project. The Proterozoic geological and geophysical setting is large enough to host and hide world class deposits of this model type. The "Arc of Fire" has considerable exploration potential with easy access and low-cost entry opportunities. Historical drilling documents favourable rock types such as picrite, gabbro, anorthosite and carbonatites.

Mineralization

The majority of the Claims have not been previously explored. Historical exploration on a very small number of the Claims has been minor. The rocks that underlie the Claims are covered with thick overburden with little to no outcrop exposure, therefore most of the mineralization observed has been from drill core. The following are the Ontario Geological Survey ("OGS") occurrences located in the Claims:

1) Niobium – UTM's: 688472.8 East, 5560979.6 North, NAD 83 – a sample of anorthosite assayed 0.1% Nb_2O_5 (MDI# 42K01NM00004) from Algoma drill hole #5-64. (Figure 2, Claim block 4e)

2) Niobium – UTM's: 685545.8 East, 5551186.5 North, NAD 83 – a sample of amphibole pyroxene syenite assayed 0.3% Nb_2O_5 (MDI# 42K01SW00004) from Algoma drill hole #8-64. (Figure 2, Claim block 4f).

Additional mineral occurrences (observed in drill core) have been reported in historical exploration company assessment reports:

1) Mineralization in outcrop: trace pyrrhotite, pyrite and chalcopyrite - UTM`s: 652395E/5515600N, NAD 83 - observed in gabbro/norite. (Figure 2, claim block 4b)

2) DDH #4: UTM's 652360E, 5515621N, NAD 83 - 2% pyrrhotite, pyrite, trace chalcopyrite within gabbro/norite. (Figure 2, claim block 4b)

3) DDH #4-64: UTM's 690049E/5561066N, NAD 83 - 5-10% magnetite within syenite; at 755 feet – 20% magnetite until end of hole. (Figure 2, claim block 4e)

4) DDH#5-64: UTM's 688452E/5561071, NAD 83 - 5% magnetite in diorite. (Figure 2, claim block 4e)

5) DDH #8-64: UTM's 685792E, 5551132N, NAD 83 - trace amounts of REE's in drill hole – 0.04% columbium, 0.1% lanthanum, 0.02% neodymium. (Figure 2, claim block 4f)

6) DDH #HS69-1: UTM's 696226E, 5579982N, NAD 27 - at 1338 feet, thin seam of calcite and quartz, containing pyrrhotite and chalcopyrite. (Figure 2, claim block 3f)

7) DDH #HD69-1B: UTM's 656977E, 5639148N, NAD 27 - at approximately 900 feet, intersected gabbro with minor sulphides. (Figure 2, claim block 2c)

8) DDH #HA69-1: (South of Lone Lake area) At 731 feet to 901 feet, drilling intersected magnetite carbonatite described as: "blue-grey granular quartz with magnetite in small disseminated grains interbedded with seams, stringers and veins of massive magnetite. Contains some massive magnetite beds, estimated at 30-40% soluble iron. (Exact location not found.)

Exploration

The Corporation is conducting staged exploration on the Claims. The preliminary exploration utilized a helicopter borne time domain EM geophysical VTEM35 survey flown by Geotech. Geotech's time-domain EM system utilizes modern advances in digital electronics and signal processing. The VTEM35 system has the highest signal to noise ratio of any airborne EM system resulting in the deepest possible depth of investigation.

A test survey conducted over two Claim blocks indicated that the VTEM35 system has excellent penetration in what is a moderately conductive environment. Geotech's modeling suggests that the VTEM35 system is mapping a thickness of approximately 350-400 meters on average. Based on these results the VTEM35 system is expected to map a thickness with similar resistivity depths approaching 600 meters.

The field portion of the survey commenced on March 20, 2010 and ended May 19, 2010, with lines flown in a north-south direction using 150 metre line spacing. The survey totalled approximately 9450 line km over 28 Claim blocks. Results of this survey were used to identify several high priority geophysical electromagnetic targets for follow-up drilling under the recommended Phase I and II Drill Budgets.

Interpretation and Conclusions

The Claims are situated in a vast area of Northern Ontario that in the opinion of the author of the Technical Report is underexplored. The Claims cover ground that is considered new frontier in mineral exploration. The disclosure in the Technical Report summarizes the limited historical exploration work carried out by companies, reported results, interpretation of geophysical surveys and diamond drilling, and recommendations for future exploration work on the Claims.

The Claims cover ground that has potential to host Cu-Ni-PGM deposits. Most of the limited historical exploration has been reconnaissance geophysical surveys (airborne and ground magnetic, and electromagnetic projects), with a minor amount of follow-up diamond drilling. Past geophysical magnetic surveys have outlined several anomalies within the Precambrian rocks that underlie the Paleozoic limestone. A helicopter borne VTEM geophysical survey has been successfully completed over the Claims. Results have been presented as stacked profiles, and contour color images at a scale of 1:10,000 & 1:20,000. The survey results are supported by the EM anomaly picking, EM time-constant (Tau) and magnetic derivative analyses that were performed. The results of the Corporation's recently flown helicopter borne magnetic and EM survey outlined several high priority targets for diamond drill testing of possible Cu-Ni-PGM mineralization.

Recommendations and Budget

The Corporation has finished the preliminary exploration for Cu-Ni-PGE targets on the Claims and is proposing to conduct a follow-up two-phase exploration program described below.

The preliminary exploration on the Claims, carried out in the winter and spring of 2010, consisted of a Geotech helicopter borne VTEM 35 survey. Results of this survey will be used to identify high priority Cu-Ni-PGM targets for diamond drilling. A total of 22 high priority geophysical anomalies (EM and magnetic) have been identified for follow-up modeling and drill testing with a minimum of 1000 metres per target. Based on the geophysical results obtained, a number of other EM anomalies were identified on various Claim blocks and warrant drill testing as well. The magnetic results may also contain worthwhile information in support of exploration targets of interest. It is therefore recommended in the Technical Report that a detailed interpretation of the available geophysical data be conducted, in conjunction with the geology. It is recommended that this should include 2D - 3D inversion modeling analyses and magnetic derivative analysis prior to ground follow up and drill testing.

The two phases of recommended exploration will include geophysical modeling and a minimum of 22,000 metres of diamond drilling to test airborne magnetic and EM anomalies. The proposed two-phase budget for exploration on the Claims are estimated to cost a total of $8,507,446; $5,083,263 in respect of the Phase I and $3,424,183 in respect of the Phase II. Phase II of the exploration program is contingent on the results of Phase I.

Outlook

The priority for the Corporation at this point is to continue the exploration program on the Albany Project which includes geophysics and drilling throughout 2011 with a budget of approximately $8 million.

Selected Financial Information

The following table sets forth selected financial information with respect to the Corporation as at and for the period from incorporation to March 31, 2009, the year ended March 31, 2010, and the nine month periods ended December 31, 2009 and 2010. The selected financial information has been derived from the audited and unaudited financial statements of the Corporation for the financial periods indicated. The following should be read in conjunction with the said financial statements and related notes thereto.

	Nine months ended December 31,		Year ended March 31,	Period from Incorporation to March 31,
	2010 (Unaudited)	**2009 (Unaudited)**	**2010 (Audited)**	**2009 (Audited)**
Total Revenue	$2,996	Nil	$184	Nil
Net Income (Loss)	$(869,658)	Nil	$(147,951)	Nil
# Shares Outstanding	39,570,313	Nil	21,390,000	Nil
Net Income (Loss) per Share (Basic)	$(0.04)	Nil	$(0.06)	Nil
Net Income (Loss) per Share (Diluted)	$(0.04)	Nil	$(0.06)	Nil
Total Assets	$12,570,690	Nil	$3,196,598	Nil
Total Financial Liabilities	$337,064	Nil	$155,901	Nil
Total Shareholder's Equity	$12,233,626	Nil	$3,040,697	Nil

Summary of Quarterly Results

The following table sets out selected quarterly information for the eight most recently completed quarters, from the date of incorporation to the most recent interim period for which financial statements are prepared.

	Dec. 31, 2010	Sept. 30, 2010	June 30, 2010	March 31, 2010	Dec. 31, 2009	Sept. 30, 2009	June 30, 2009	March 31, 2009
Revenue	$1,243	$944	$809	$184	Nil	Nil	Nil	Nil
Loss	$502,824	$253,199	$113,635	$147,951	Nil	Nil	Nil	Nil
Loss per Share (Basic)	$0.02	$0.01	$0.01	$0.06	Nil	Nil	Nil	Nil
Loss per Share (Diluted)	$0.02	$0.01	$0.01	$0.06	Nil	Nil	Nil	Nil

Liquidity and Capital Resources

The Corporation had estimated working capital of $9,857,684 and cash of $9,557,894 as at December 31, 2010 (unaudited). The Corporation funded operations during the period ended December 31, 2010 through the net proceeds of its initial public offering, private placement financings, and existing cash.

The Corporation remains in sound financial position to fund its currently planned and anticipated exploration programs, operating expenses and contractual commitments for calendar year 2011, as well as meet currently known contractual commitments beyond the 2011 work program.

The Corporation will need to raise additional funding to finance future exploration programs and development activity. The availability of equity capital, and the price at which additional equity could be issued, is dependent upon the success of the Corporation's exploration activities, and upon the state of the capital markets generally. Additional financing may not be available on terms favourable to the Corporation or at all. If the Corporation does not receive future financing, it may not be possible for the Corporation to advance the exploration and development of the Claims.

Off Balance Sheet Arrangements
There are currently no off balance sheet arrangements which could have an effect on current or future results or operations, or the financial condition of the Corporation.

Transactions with Related Parties
During the three and nine-month periods ended December 31, 2010, a corporation controlled by a director and officer of the Corporation charged the following amounts: $Nil and $211,918 (December 31, 2009: $Nil) for contract and management services; $7,294 and $29,756 (December 31, 2009: $Nil) for investor relations and promotion; $20,929 and $20,929 (December 31, 2009: $Nil) for general and administrative expenses related to travel.

As at December 31, 2010, $23,107 (March 31, 2010: $82,580) included in accounts payable and accrued liabilities was owing to a corporation controlled by a director and officer of the Corporation.

The above transactions occurred in the normal course of operations and are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties. The amounts owing to the related parties are unsecured, non-interest bearing with no fixed terms of repayment.

During the nine-month period ended December 31, 2010, a director of the Corporation subscribed for 300,000 units of the Corporation for gross proceeds of $75,000 through a private placement. A director and officer of the Corporation and the spouse of the same director and officer subscribed for an aggregate of 113,000 flow-through shares for gross proceeds of $79,100, and a director of the Corporation subscribed for an aggregate of 110,000 flow-through shares for gross proceeds of $77,000 pursuant to the IPO.

On August 1, 2010 the Corporation entered into an employment agreement with the CEO whereby the Corporation would pay the CEO an annual salary of $225,000, payable monthly.

Changes in Accounting Policies including Initial Adoption

International Financial Reporting Standards ("IFRS")
In 2006, the Canadian Accounting Standards Board ("AcSB") published a new strategic plan that will significantly affect financial reporting requirements for Canadian companies. The AcSB strategic plan outlines the convergence of GAAP with IFRS. The transition date is for interim and annual financial statements relating to fiscal year's beginning on or after January 1, 2011. The transition date of April 1, 2011 for the Corporation will require the restatement for comparative purposes of amounts reported by the Corporation for the year ending March 31, 2011 and each set of interim financial statements issued in fiscal 2011.

The Corporation has commenced the development of an IFRS implementation plan to prepare for this transition, and is in the process of analyzing the key areas where changes to current accounting policies may be required. While an analysis will be required for all accounting policies, the initial key areas of assessment will include:

- Exploration and development expenditures;
- Accounting for income taxes; and
- First-time adoption of International Financial Reporting Standards (IFRS 1).

As the analysis of each of the key areas progresses, other elements of the Corporation's IFRS implementation plan will also be addressed, including: the implication of changes to accounting policies and processes; financial statement note disclosures on information technology; internal controls; contractual arrangements; and employee and consultants training. The table below summarizes the expected timing of activities related to the Corporation's transition to IFRS.

Initial analysis of key areas for which changes to accounting policies may be required	Completed
Detailed analysis of all relevant IFRS requirements and identification of areas requiring accounting policy changes or those with accounting policy alternatives	Completed
Assessment of first-time adoption (IFRS 1) requirements and alternatives	Completed
Final determination of changes to accounting policies and choices to be made with respect to first-time adoption alternatives	In process, completion expected during Fiscal 2011
Resolution of the accounting policy change implications on information technology, internal controls and contractual arrangements	In process, completion expected during Fiscal 2011
Management, employee and consultant education and training	Throughout the transition process
Quantification of the Financial Statement impact of changes in accounting policies	Throughout fiscal 2011

Impact of Adopting IFRS on the Corporation's Business

As part of its analysis of potential changes to significant accounting policies, the Corporation is assessing what changes may be required to its accounting systems and business processes. The Corporation believes that the changes identified to date are minimal and the systems and processes can accommodate the necessary changes.

To date, the Corporation has not identified any contractual arrangements that may be affected by potential changes to significant accounting policies.

The Corporation's advisers involved in the preparation of the financial statements are being continually trained on the relevant aspects of IFRS and the anticipated changes to accounting policies.

The Board and the Audit Committee have been regularly updated on the progress of the IFRS conversion plan, and made aware of the evaluation to date of the key aspects of IFRS affecting the Corporation.

First-time adoption of IFRS

The adoption of IFRS requires the application of IFRS 1 *First-time Adoption of International Financial Reporting Standards* ("IFRS 1"), which provides guidance for an entity's initial adoption of IFRS. IFRS 1 generally requires retrospective application of IFRS, effective at the end of its first annual IFRS reporting period. However, IFRS 1 also provides certain optional exemptions and mandatory exceptions to this retrospective treatment.

The Corporation has not identified any relevant optional exemptions that it expects apply in its preparation of an opening IFRS statement of financial position as at April 1, 2011, its transition date. Prior to reporting interim financial statements in accordance with IFRS for the quarter ending June 30, 2011, the Corporation may decide to apply optional exemptions contained in IFRS 1 if they become relevant.

IFRS 1 does not permit changes to estimates that have been made previously. Accordingly, estimates used in the preparation of the Corporation's opening IFRS statement of financial position as at the transition date will be consistent with those made under current Canadian GAAP. If necessary, estimates will be adjusted to reflect any difference in accounting policy.

Impact of Adopting IFRS on the Corporation's Financial Statements

The adoption of IFRS will result in some changes to the Corporation's accounting policies that are applied in the recognition, measurement and disclosure of balances and transactions in its financial statements.

The following provides a summary of the Corporation's evaluation to date of potential changes to accounting policies in key areas based on the current standards and guidance within IFRS. This is not intended to be a complete list of areas where the adoption of IFRS will require a change in accounting policies, but to highlight the areas the Corporation has identified as having the most potential for a significant change. The International Accounting Standards Board has a number of ongoing projects, the outcome of which may have an effect on the changes required to the Corporation's accounting policies on adoption of IFRS. At the present time, however, the Corporation is not aware of any significant expected changes prior to its adoption of IFRS that would affect the summary provided below.

1) Exploration and Evaluation Expenditures

IFRS 6, *Exploration for and Evaluation of Mineral Resources* (IFRS 6), applies to expenditures incurred on properties in the exploration and evaluation (E&E) phase. The E&E phase begins when an entity obtains the legal rights to explore a specific area and ends when the technical feasibility and commercial viability of extracting a mineral resource are demonstrable. IFRS 6 requires entities to select and consistently apply an accounting policy specifying which E&E expenditures are capitalized and which are expensed.

The Corporation expects to develop an accounting policy under IFRS that is substantially similar to its current policy.

2) Impairment of (Non-financial) Assets

IFRS requires a write down of assets if the higher of the fair market value and the value in use of a group of assets is less than its carrying value. Value in use is determined using discounted estimated future cash flows. Current Canadian GAAP requires a write down to estimated fair value only if the undiscounted estimated future cash flows of a group of assets are less than its carrying value.

The Corporation's accounting policies related to impairment of non-financial assets will be changed to reflect these differences. However, the Corporation does not expect that this change will have an immediate impact on the carrying value of its assets. The Corporation will reperform impairment assessments in accordance with IFRS at the transition date.

3) Asset Retirement Obligations (Decommissioning Liabilities)

IFRS requires the recognition of a decommissioning liability for legal or constructive obligations, while current Canadian GAAP only requires the recognition of such liabilities for legal obligations. A constructive obligation exists when an entity has created reasonable expectations that it will take certain actions.

The Corporation's accounting policies related to decommissioning liabilities will be changed to reflect these differences. However, the Corporation does not expect this change will have an immediate impact on the carrying value of its assets.

4) Property and Equipment

IFRS contains different guidance related to recognition and measurement of property and equipment than current Canadian GAAP.

The Corporation does not expect any changes to its accounting policies related to property and equipment that would result in a significant change to line items within its financial statements.

5) Income Taxes

In certain circumstances, IFRS contains different requirements related to recognition and measurement of future (deferred) income taxes.

The Corporation does not expect any changes to its accounting policies related to income taxes that would result in a significant change to line items within its financial statements.

Subsequent Disclosures

Further disclosures of the IFRS transition process are expected as follows:

- The Corporation's MD&A for the 2011 interim periods and the year ended March 31, 2011 will include updates on the progress of the transition plan, and, to the extent known, further information regarding the impact of adopting IFRS on key line items in the annual financial statements.

- The Corporation's first financial statements prepared in accordance with IFRS will be the interim financial statements for the three months ending June 30, 2011, which will include notes disclosing transitional information and disclosure of new accounting policies under IFRS. The interim financial statements for the three months ending June 30, 2011, will also include the March 31, 2011 financial statements for the comparative period adjusted to comply with IFRS, and the Corporation's transition date IFRS statement of financial position (at April 1, 2010).

Financial Instruments and Other Instruments

The Corporation's financial instruments consist of cash, temporary investments, GST receivable and accounts payable and accrued liabilities. Unless otherwise noted, the Corporation does not expect to be exposed to significant interest, currency or credit risks arising from these financial instruments. The Corporation estimates that the fair value of these financial instruments approximate carrying values.

The Corporation has designated its cash and temporary investments as held-for-trading, which are measured at fair value. Financial instruments as at December 31, 2010 included GST receivable, which is classified as loans and receivables and is measured at amortized cost. Accounts payable and accrued liabilities are classified as other financial liabilities, which are measured at amortized cost. As at December 31, 2010, the carrying and fair value amounts of the Corporation's financial instruments are approximately the same.

At December 31, 2010, the Corporation's financial instruments that are carried at fair value, consisting of cash and temporary investments, have been classified as Level 1 within the fair value hierarchy.

Fair value estimates are made at the balance sheet date based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties in significant matters of judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect these estimates.

Disclosure of Outstanding Share Data
The Corporation is authorized to issue an unlimited number of Shares, of which 39,570,313 Shares were issued and outstanding as fully paid and non-assessable as at December 31, 2010. Also, 15,055,549 Warrants were outstanding as at December 31, 2010.

In December 2010, the Corporation granted 2,275,000 stock options to directors, officers and employees. These stock options were granted pursuant to the Corporation's Stock Option Plan with a term of five years and an exercise price of $0.60 per share. As at December 31, 2010, 758,333 of the above stock options had vested and are exercisable.

9,225,000 common shares and 4,027,000 warrants of the Corporation held by Principals (as defined by the TSXV) of the Corporation prior to the completion of the IPO were held in escrow. 10% of such securities were released upon completion of the IPO, and 15% will be released every six months thereafter, subject to acceleration provisions provided for in National Policy 46-201 – Escrow for Initial Public Offerings. In addition, 14,565,000 shares held by non-principals prior to the completion of the IPO are subject to resale restrictions imposed by the TSXV. 150,000 of such shares are subject to the release schedule noted above; 4,175,000 of such shares are subject to a one-year hold period with 20% released every three months, the first release being the completion of the IPO; and 10,240,000 of such shares are subject to a four-month hold period with 20% released every month, the first release being the completion of the IPO.

Risks and Uncertainties
The Corporation's risk exposures and the impact on the Corporation's financial instruments are summarized below. As at December 31, 2010 there had been no changes in the risks, objectives, policies and procedures from the previous period.

Credit risk
As at December 31, 2010, the Corporation's credit risk was primarily attributable to cash, temporary investments, and GST receivable. The Corporation has no significant concentration of credit risk arising from operations. Financial instruments included in GST receivable consisted of goods and services tax due from the Federal Government of Canada. The Corporation's cash and temporary investments are held with reputable financial institutions. Management believes that the credit risk with respect to financial instruments included in GST receivable is remote.

Liquidity risk
The Corporation's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities when due. As of December 31, 2010, the Corporation had a cash balance of $9,557,894 as well as $525,998 in temporary investments to settle current liabilities of $337,064. The Corporation's ability to continue operations and fund its exploration property expenditures is dependent on management's ability to secure additional financing. Management is continuing to pursue various financing initiatives in order to provide sufficient cash flow to finance operations as well as funding its exploration expenditures. All of the Corporation's financial liabilities have contractual maturities of less than 30 days and are subject to normal trade terms.

Interest rate risk
The Corporation has cash balances and temporary investments. The Corporation's current policy is to invest excess cash in investment-grade short-term deposit certificates issued by its banking institutions. The Corporation periodically monitors the investments it makes and is satisfied with the credit ratings of its banks. The Corporation closely monitors interest rates to determine the appropriate course of action to be taken by the Corporation.

Price risk
The Corporation is exposed to price risk with respect to commodity prices. The Corporation closely monitors commodity prices to determine the appropriate course of action to be taken by the Corporation.

Exploration Risk
Mineral exploration and development involve a high degree of risk and few projects are ultimately developed into producing mines. There is no assurance that the Corporation's future exploration and development activities will result in the definition of a body of commercial ore. Whether an ore body will be commercially viable depends on a number of factors including the particular attributes of the deposit such as size, grade and proximity to infrastructure, as well as mineral prices and government regulations, including environmental regulations.

Financial Capability and Additional Financing
If the Corporation's exploration programs are successful, additional funds will be required in order to complete the development of its properties. The only sources of future funds presently available to the Corporation are the sale of additional equity capital or the entering into of joint venture arrangements or other strategic alliances in which the funding sources could become entitled to an interest in the properties or the projects. The Corporation's capital resources are largely determined by the strength of the junior resource market and by the status of the Corporation's projects in relation to these markets, and its ability to compete for investor support of its projects.

In order to exercise the Second Option to increase its ownership of the Albany Project to 80%, the Corporation must incurring aggregate expenses on the property of not less than $10 million before July 1, 2014, of which $1.5 million has been incurred.

There is no assurance that the Corporation will be successful in raising sufficient funds to meet its obligations or to complete all of the currently proposed exploration programs. If the Corporation does not raise the necessary capital to meet its obligations under current contractual obligations, the Corporation may have to forfeit its interest in properties or prospects earned or assumed under such contracts. In addition, if the Corporation does not raise the funds to complete the currently proposed exploration programs, the viability of the Corporation could be jeopardized.

Permits and Government Regulation
Although the Corporation believes it has all of the necessary permits to carry out the proposed exploration programs, the operations of the Corporation may require licenses and permits from time to time from various governmental authorities to carry out exploration and development at its projects. Obtaining permits can be a complex, time-consuming process. There can be no assurance that the Corporation will be able to obtain the necessary licences and permits on acceptable terms, in a timely manner or at all. The costs and delays associated with obtaining permits and complying with these permits and applicable laws and regulations could stop or materially delay or restrict the Corporation from continuing or proceeding with existing or future operations or projects. Any failure to comply with permits and applicable laws and regulations, even if inadvertent, could result in the interruption or closure of operations or material fines, penalties or other liabilities. In addition, the requirements applicable to sustain existing permits and licenses may change or become more stringent over time and there is no assurance that the Corporation will have the resources or expertise to meet its obligations under such licenses and permits.

The mineral exploration activities of the Corporation are subject to various laws governing prospecting, development, production, taxes, labour standards, occupational health, mine safety, waste disposal, toxic substances and other matters. Mining and exploration activities are also subject to various laws and regulations relating to the protection of the environment, historical and archaeological sites and endangered and protected species of plants and animals. Although the exploration activities of the Corporation are currently carried out in material compliance with all applicable rules and regulations, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner which could limit or curtail exploration or development. New rules and regulations may be enacted or existing rules and regulations may be applied to the operations and activities of the Corporation and could have a substantial adverse impact on the Corporation.

Fluctuating Prices

The profitability of the Corporation's operations will be dependent upon the market price of mineral commodities. Mineral prices fluctuate widely and are affected by numerous factors beyond the control of the Corporation. The level of interest rates, rate of inflation, world supply of mineral commodities, consumption patterns, sales of nickel and copper, forward sales by producers, production, industrial and consumer demand, speculative activities and stability of exchange rates can all cause significant fluctuations in prices. Such external economic factors are in turn influenced by changes in international investment patterns, monetary systems and political developments. The prices of mineral commodities have fluctuated widely in recent years. Current and future price declines could cause commercial production to be impracticable. The prices of commodities are affected by numerous factors beyond the Corporation's control.

Environmental Regulation

The Corporation's activities are subject to environmental laws and regulations which may materially adversely affect its future operations. These laws and regulations control the exploration and development of the Albany Project and their effects on the environment, including air and water quality, waste handling and disposal, the protection of different species of plant and animal life, and the preservation of lands. These laws and regulations will require the Corporation to acquire permits and other authorizations for certain activities. There can be no assurance that the Corporation will be able to acquire such necessary permits or authorizations on a timely basis, if at all.

Further, environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Corporation's operations.

The Corporation is not currently insured against most environmental risks. Without such insurance, and if the Corporation becomes subject to environmental liabilities, the payment of such liabilities would reduce or eliminate its available funds or could exceed the funds the Corporation has to pay such liabilities and result in bankruptcy.

Proposed transactions

As is typical of the mineral exploration and development industry, the Corporation is continually reviewing potential merger, acquisition, investment and joint venture transactions and opportunities that could enhance shareholder value. At present there are no transactions being contemplated by management or the board that would affect the financial condition, results of operations and cash flows of any asset of the Corporation.

Critical accounting estimates
A detailed summary of all of the Corporation's significant accounting policies is included in Note 2 to the March 31, 2010 audited financial statements.

Internal Controls over Financial Reporting
Management is responsible for the design of internal controls over financial reporting to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements in accordance with accounting principles generally accepted in Canada. Based on regular reviews of its internal control procedures during and at the end of the period covered by this MD&A, management believes its internal controls and procedures are effective in providing reasonable assurance that financial information is recorded, processed, summarized and reported in a timely manner.

Changes to Internal Control over Financial Reporting
There have been no significant changes to the Corporation's internal controls over financial reporting that occurred during the nine month period ended December 31, 2010 that have materially affected, or are reasonably likely to materially affect the Corporation's internal control over financial reporting.

Disclosure Controls
Management is also responsible for the design and effectiveness of disclosure controls and procedures to provide reasonable assurance that material information related to the Corporation is made known to the Corporation's certifying officers. The Corporation's Chief Executive Officer and Chief Financial Officer have each evaluated the effectiveness of the Corporation's disclosure controls and procedures as of December 31, 2010 and have concluded that these controls and procedures are effective in providing reasonable assurance that material information relating to the Corporation is made known to them by others within the Corporation
