III. Basic information

1. Company Profile

According to the Approval Document SFBF (1991) No. 888 issued by the People's Government of Shenzhen, Shenzhen China Bicycle Company (Holdings) Co., Ltd. (hereinafter referred to as the CBC) was reincorporated as the company limited by shares in November 1991. On 28 December 1991, upon the Approval Document SRYFZ(1991) No. 119 issued by Shenzhen Special Economic Zone Branch of the People's Bank of China, the Company got listed on Shenzhen Stock Exchange. Registered of the Company amounted as 689,184,933.00 Yuan.

Legal representative: Wang Shenghong

Location: No. 3008, Buxin Road, Luohu District, Shenzhen

Office address: 8/F Shuibei Jinzuo Building, No.89 Beili North Road, Cuizhu Street, Luohu District, Shenzhen Certificate for Uniform Social Credit Code: 914403006188304524。

2. Business nature and main operation activities

Main business activities: Research & development of the bicycles, electric bicycles, electric motorcycles, motorcycles, electric tricycles, electric four-wheeler, children's bicycles, exercise bikes, sports equipment, mechanical products, toys, electric toys, electronic products, new energy equipment and storage equipment (lithium batteries, batteries, etc.), household appliances and spare parts, and electronic components; wholesale, retail, import and export and related supporting business of above-mentioned products (excluding commodities subject to state trade management, handling the application according to the relevant national regulations for commodities involving quotas, license management and other special provisions and management,); fine chemical products (excluding dangerous goods), wholesale and retail of carbon fiber composite materials; technology development of computer software, transfer of self-developed technological achievements, and providing relevant technical information consultation; own property leasing; property management. (The above projects do not involve special administrative measures for the implementation access of national regulations, and those involving restricted projects and pre-existing administrative licenses must obtain the pre-existing administrative licensing documents before operation.) Purchase and sale of gold products, platinum jewelry, palladium jewelry, K-gold jewelry, silver jewelry, inlaid jewelry, jewelry, jade ware, gem-and-jade products, clocks and watches, precious metal materials, diamonds, jadeite, crafts (except ivory and its products), calligraphy and painting, collection (except for antiques, cultural relics, and items prohibited by national laws and administrative regulations).

Main products or services currently offered are: Gold jewelry, EMMELLE bicycles and electrical bicycles, lithium battery material.

3. Actual controller of the Company

Actual controller of the Company is Wang Shenghong, The controlling shareholder is Wansheng Industrial Holding (Shenzhen) Co., Ltd.,who held or controlled 20% shares of the Company.

4. Release of the financial report

The Financial Report was approved to report at the 14th Session of 11th BOD of CBC on August 23, 2024.

IV. Compilation Basis of Financial Statement

1. Compilation Basis

On the basis of going concern, the Company recognizes and measures according to the actual transactions and events, the Accounting Standards for Business Enterprises-Basic Standards and other specific accounting standards, application guidelines, standard interpretation and other relevant provisions (hereinafter referred to as the Accounting Standards for Business Enterprises), and on this basis, it compiles the financial statements in combination with the provisions of the No.15 Rules on Information Disclosure and Compilation of Companies Offering Securities to the Public - General Provisions on Financial Reports (revised in 2023) issued by China Securities Regulatory Commission.

2. Going concern

The Company has the ability to continue to operate for at least 12 months from the end of this reporting period, and there is no major issue affecting its ability to continue to operate.

V. Main accounting policy and Accounting Estimate

Tips for specific accounting policy and estimate:

Nil

1. Declaration on compliance with accounting standards for business enterprise

The financial statements prepared by the Company meet the requirements of the Accounting Standards for Business Enterprises, and truly and completely reflect the Company's financial status, operating results, changes in owners' equity and cash flow and other relevant information.

2. Accounting period

Calendar year is the accounting period for the CBC, which is starting from 1 January to 31 December.

3. Business cycles

The Company takes 12 months as a business cycle.

4. Book-keeping currency

The CBC takes RMB as the standard currency for bookkeeping.

5.Determination method and selection basis of importance standard

☑Applicable □Not applicable

Item	Criterion of importance
Material receivables with bad debt provision accrued individually	Commercial acceptance bills receivable, accounts receivable and other receivables with a single amount exceeding RMB 5 million (inclusive)
Material amount recovered or reversed from bad debt provision of receivables in the current period	The single amount exceeds RMB 5 million (inclusive)
Write-off of Important material receivables in the current period	The single amount exceeds RMB 5 million (inclusive)

Material prepayments with an age of more than one year	The single amount exceeds RMB 5 million (inclusive)
Material accounts payable with an age of over 1 year	The single amount exceeds RMB 5 million (inclusive)
Material contractual liabilities with an age of more than 1 year	The single amount exceeds RMB 5 million (inclusive)
Material other payables with an age of more than 1 year	The single amount exceeds RMB 5 million (inclusive)
Material construction in progress	Construction in progress with a single amount exceeding RMB
Waterial construction in progress	5 million (inclusive)
Material commitments	Commitments involving an amount of more than 10% of the
Waterial Commitments	total profit and more than RMB 5 million (inclusive)
Material contingencies	Contingencies involving an amount of more than 10% of the
Waterial Contingencies	total profit and more than RMB 5 million (inclusive)
	Matters after the balance sheet date involving an amount
Material matters after the balance sheet date	exceeding 10% of the total profit and exceeding RMB 5 million
	(inclusive)

6. Accounting treatment for business combinations under the same control and those not under the same control

- 1. Business merger under the same control: The assets and liabilities acquired by the Company in business merger are measured according to the book value of the assets and liabilities of the merged party (including the goodwill formed by the acquisition of the merged party by the ultimate controlling party) in the consolidated financial statements of the ultimate controlling party on the date of merger. For the difference between the book value of the net assets obtained in the merger and the book value of the merger consideration paid (or the total face value of the issued shares), adjust the capital premium or share capital premium in the capital reserve. If the capital premium or share capital premium or share capital premium in the retained income.
- 2. Business merger not under the same control: The assets paid, liabilities incurred or assumed by the Company as the consideration for business merger are measured at fair value on the date of purchase, and the difference between fair value and book value is included in the current profits and losses. The Company recognizes the difference between the merger cost and the fair value share of the net identifiable assets of the acquiree obtained in the merger as goodwill; For the difference between the merger cost and the fair value share of the net identifiable assets of the acquiree (which is larger than the merger cost), it reviews the fair values of the assets and liabilities obtained in the merger, the non-cash assets as the merger consideration or the equity securities issued, and the review results show that the determination of the fair values of the determined identifiable assets and liabilities is appropriate. The difference between the business merger cost and the fair value share of the net identifiable assets of the acquiree (which is larger than the business merger cost) is included in the non-operating income in the current merger period.

The business merger not under the same control is realized step by step through multiple transactions, and the merger cost is the sum of the consideration paid on the date of purchase and the fair value of the equity of the acquiree held before the date of purchase; The equity of the purchased party held before the date of purchase shall be re-measured according to the fair value on the date of purchase, and the difference between the fair value and its book value shall be included in the current investment income. Other comprehensive income of the long-term equity investment of the acquiree held before the date of purchase under the accounting by equity method shall be subject to accounting treatment on the same basis as the direct disposal of relevant assets or liabilities by the investee. Changes in other shareholders' equity except net profits and losses, other comprehensive income and profit distribution shall be converted into current profits and losses on the date of purchase. For other equity instrument investments of the acquiree held before the date of purchase, the changes in fair value of the equity instrument investments accumulated in other comprehensive income before the date of purchase are transferred to retained profits and losses.

3. Disposal of related expenses in business merger: Intermediary expenses such as audit, legal services, evaluation and consultation and other related management expenses incurred for business merger are included in current profits and losses when incurred; The transaction costs of equity securities or debt securities issued as the merger consideration are included in the initial recognition amount of equity securities or debt securities.

7. Criteria for control and preparation method of consolidated financial statements

1. Criteria for control and preparation scope of consolidated statements

Control means that the investor has the power over the investee, enjoys variable returns by participating in the related activities of the investee, and has the ability to influence the amount of returns by using the power over the investee. As for whether to control the investee, the Company's criterion factors include:

- (1) Have the power over the investee and the ability to lead the related activities of the investee;
- (2) Be entitled to variable returns to the investee;
- (3) Have the ability to use the power over the investee to influence its return amount.

Unless there is conclusive evidence that the Company cannot lead the related activities of the investee, the Company has the power over the investee if:

- (1) It holds more than half of the voting rights of the investee;
- (2) It holds half or less of the voting rights of the investee, but controls more than half of the voting rights through agreements with other voting rights holders.

If the Company holds half or less of the voting rights of the investee, but after comprehensive consideration of the following facts and circumstances, it is judged that the voting rights held are sufficient to lead the relevant activities of the investee, it is deemed that the Company has power over the investee:

- (1) The size of the voting rights held relative to the voting rights held by other investors, and the degree of dispersion of the voting rights held by other investors;
- (2) The potential voting rights of the investee held by other investors, such as convertible corporate bonds and executable warrants;
 - (3) Other contractual rights;
 - (4) Other relevant facts and circumstances such as the past voting rights of the investee.

The Company evaluates the variability of returns based on the nature of contractual arrangements rather than the legal form of returns.

If the Company exercises the decision-making power as the main responsible person, or if other parties have the decision-making power and other parties exercise the decision-making power as the agents of the Company, it shows that the Company controls the investee.

Once the changes in relevant facts and circumstances lead to changes in the relevant factors involved in the definition of control, the Company will re-evaluate.

The scope of consolidation of the consolidated financial statements is determined on the basis of control, including not only subsidiaries determined by voting rights (or similar rights) themselves or in combination with other arrangements, but also structured entities determined by one or more contractual arrangements.

2. Merger procedure

The consolidated financial statements are based on the financial statements of the Company and its subsidiaries, and are prepared according to other relevant information.

The Company unifies the accounting policies and accounting periods adopted by its subsidiaries, so that the accounting policies and accounting periods adopted by its subsidiaries are consistent with those adopted by the Company. When preparing consolidated financial statements, it follows the principle of materiality to offset the internal exchanges, internal transactions and equity investment projects between the parent company and the subsidiaries, and between the subsidiaries.

The equity and profit and loss attributable to minority shareholders of the subsidiaries are listed separately under the item of the owners' equity in the consolidated balance sheet and under the item of net profit in the consolidated income statement. The current loss shared by minority shareholders of a subsidiary exceeds the balance formed by minority shareholders' share in the initial owners' equity of the subsidiary, thus offsetting minority shareholders' equity.

(1) Increase of subsidiaries and businesses

During the reporting period, when preparing the consolidated balance sheet due to the business merger under the same control and the subsidiaries and businesses increased, the opening balance of the consolidated balance sheet is adjusted; When preparing the income statement, the income, expenses and profits of the subsidiary and business merger from the beginning of the current period to the end of the reporting period are included in the consolidated income statement; When the cash flow statement is consolidated, the cash flows of the subsidiary and the business combination from the beginning of the current period to the end of the reporting period are included in the consolidated cash flow statement; At the same time, the relevant items of the comparative statements shall be adjusted, as if the merged reporting entity had existed since the ultimate controlling party started to control.

During the reporting period, when preparing the consolidated balance sheet for subsidiaries and businesses increased due to business merger not under the same control or other means, the opening balance of the consolidated balance sheet will not be adjusted. When preparing the income statement, the income, expenses and profits of the subsidiary and the business from the date of purchase to the end of the reporting period shall be included in the consolidated income statement. When preparing the cash flow statement, the cash flow of the subsidiary from the date of purchase to the end of the reporting period shall be included in the consolidated cash flow statement.

The Company prepares consolidated financial statements based on the amount of identifiable assets, liabilities and contingent liabilities determined on the basis of the fair value on the date of purchase reflected in the individual financial statements of subsidiaries at the current balance sheet date. The difference between the merger cost and the fair value share of the net identifiable assets of the acquiree obtained in the merger shall be recognized as goodwill. The difference between the merger cost and the fair value share of the net identifiable assets of the acquiree obtained in the merger shall be included in the current profits and losses after review.

If the business merger not under the same control is realized step by step through multiple transactions, in the consolidated financial statements, the equity of the acquiree held before the date of purchase shall be remeasured according to the fair value of the equity on the date of purchase, and the difference between the fair value and its book value shall be included in the current investment income. Other comprehensive income of the long-term equity investment of the acquiree held before the date of purchase under the accounting by equity method shall be subject to accounting treatment on the same basis as the direct disposal of relevant assets or liabilities by the investee. Changes in other shareholders' equity except net profits and losses, other comprehensive income and profit distribution shall be converted into current profits and losses on the date of purchase. For other equity instrument investments of the acquiree held before the date of purchase, the changes in fair value of the equity instrument investments accumulated in other comprehensive income before the date of purchase are transferred to retained profits and losses.

- (2) Disposal of subsidiaries and businesses
- A. General disposal methods

During the reporting period, if the Company disposes of its subsidiaries and businesses, the income, expenses and profits of the subsidiaries and businesses from the beginning to the disposal date will be included in the consolidated income statement; The cash flow of the subsidiaries and businesses from the beginning to the disposal date will be included in the consolidated cash flow statement.

If the Company loses control of its original subsidiaries due to the disposal of some equity investments, the remaining equity shall be re-measured according to its fair value on the date of loss of control in the consolidated financial statements. The sum of the consideration obtained from the disposal of the equity and the fair value of the remaining equity, minus the difference between the share of the net assets that should be continuously calculated by the original subsidiary from the date of purchase or the date of merger according to the original shareholding ratio, is included in the current investment income when the control right is lost, and the goodwill is also offset. Other comprehensive income related to the original subsidiary's equity investment shall be subject to accounting treatment on the same basis as the subsidiary's direct disposal of relevant assets or liabilities when it loses control. Shareholders' equity recognized due to changes in other shareholders' equity related to the original subsidiary except net profit and loss, other comprehensive income and profit distribution shall be converted into current profits and losses when it loses control.

B. Dispose of equity step by step until loss of control

If the enterprise disposes of its equity investment in a subsidiary step by step through multiple transactions until it loses control, if the transaction of disposing of its equity investment in a subsidiary until the loss of control is a package transaction, it shall treat each transaction as a transaction of disposing of the subsidiary and loss of control; However, the difference between the price of each disposal before the loss of control and the share of the subsidiary's net assets corresponding to the disposal investment shall be recognized as other comprehensive income in the consolidated financial statements, and transferred to the current profits and losses when the control is lost.

The terms, conditions and economic impact of various transactions dealing with equity investment in subsidiaries meet one or more of the following conditions, which usually indicates that multiple transactions shall be subject to accounting treatment as a package transaction:

- (A) These transactions are concluded at the same time or under the consideration of mutual impact;
- (B) These transactions as a whole can achieve a complete commercial result;
- (C) The occurrence of one transaction depends on the occurrence of at least one other transaction;
- (D) A transaction is uneconomical when considered alone, but it is economical when considered together with other transactions.
 - (3) Purchase of minority shares of the subsidiaries

The Company shall adjust the capital premium or share capital premium in the capital reserve in the consolidated balance sheet for the difference between the newly acquired long-term equity investment due to the purchase of minority shares and the share of net identifiable assets that should be continuously calculated by the subsidiaries from the date of purchase (or date of merger) according to the new shareholding ratio. If the capital premium or share capital premium in the capital reserve is insufficient to offset, the retained income shall be adjusted.

(4) Partial disposal of equity investment in subsidiaries without loss of control

For the difference between the disposal price obtained from the partial disposal of the long-term equity investment in the subsidiary and the share of the net assets of the subsidiary that is continuously calculated from the date of purchase or the date of merger corresponding to the disposal of the long-term equity investment, adjust the capital premium or share capital premium in the capital reserve in the consolidated balance sheet. If

the capital premium or share capital premium in the capital reserve is insufficient to offset, adjust the retained income.

8. Classification of joint venture arrangement and accounting treatment for joint control

A joint venture arrangement refers to an arrangement controlled jointly by two or more participants. Joint venture arrangements are divided into joint operation and joint ventures.

- 1. Joint operation refers to the joint venture arrangement in which the Company is entitled to the assets related to the arrangement and undertakes the liabilities related to the arrangement. The Company recognizes the following items related to the share of interests in joint operation:
 - (1) Recognize the assets held separately, and recognize the assets held jointly according to their shares;
- (2) Recognize the liabilities undertaken separately, and recognize the liabilities jointly undertaken according to their shares;
 - (3) Recognize the income generated from the sale of its share of joint operation output;
 - (4) Recognize the income generated by the sale of output in the joint operation according to its share;
- (5) Recognize the expenses incurred separately, and recognize the expenses incurred in joint operation according to their shares.
- 2. Joint venture refers to a joint venture arrangement in which the Company has rights only to the net assets of the arrangement. The Company shall carry out accounting treatment for the investment of the joint venture in accordance with the provisions on accounting by equity method for long-term equity investment.

9. Recognition of cash and cash equivalents

When preparing the cash flow statement, the Company will recognize the cash on hand and the deposits that can be used for payment at any time as cash. An investment with short term (usually due within three months from the date of purchase), strong liquidity, easy conversion into known cash and little risk of value change will be determined as a cash equivalent. Restricted bank deposits will not be regarded as cash and cash equivalents in the cash flow statement.

10. Foreign currency transaction and financial statement conversion

1. Foreign currency business

When foreign currency business occurs, the amount of foreign currency is converted into RMB for recording according to the spot exchange rate on the date of transaction, and foreign currency monetary items and foreign currency non-monetary items are treated in the following ways at the end of the period:

- (1) Foreign currency monetary items are converted at the spot exchange rate on the balance sheet date. Exchange differences arising from the difference between the spot exchange rate on the balance sheet date and the initial recognition or the spot exchange rate on the previous balance sheet date are included in the current profits and losses.
- (2) Foreign currency non-monetary items measured at historical cost are still converted at the spot exchange rate on the date of transaction, and the amount of their recording currency will not be changed.
- (3) Foreign currency non-monetary items measured at fair value shall be converted at the spot exchange rate on the fair value determination date, and the resulting exchange gains and losses shall be included in the current profits and losses or other comprehensive income.
- (4) Foreign currency exchange gains and losses, except the exchange gains and losses arising from foreign currency special borrowing related to the purchase, construction or production of assets eligible for

capitalization, are included in the cost of assets eligible for capitalization before the assets reach the scheduled serviceable or saleable state, and the rest are included in the current profits and losses.

- 2. Conversion in foreign currency financial statements
- (1) Assets and liabilities in the balance sheet are converted at the spot exchange rate on the balance sheet date; Except for the "undistributed profit", other items of owners' equity are converted at the spot exchange rate at the time of occurrence.
- (2) The income and expenses in the income statement are converted at the approximate exchange rate of the spot exchange rate on the date of transaction.
- (3) The conversion difference of foreign currency financial statements generated according to the above conversion is included in other comprehensive income. When disposing of overseas operations, the conversion difference of foreign currency financial statements related to the overseas operations shall be transferred from the owners' equity to the current profits and losses.
- (4) The cash flow statement is converted by the approximate exchange rate of the spot exchange rate on the date of cash flow occurrence. As a reconciliation item, the influence of exchange rate changes on cash is listed separately in the cash flow statement.

11. Financial instruments

When the Company becomes a party to the financial instrument contract, it recognizes a financial asset or financial liability related to it.

1. Classification, recognition basis and measurement method of financial assets

According to the business model of financial assets under management and the contractual cash flow characteristics of financial assets, the Company divides financial assets into three categories: financial assets measured by amortized cost, financial assets measured by fair value with its changes included in other comprehensive income, and financial assets measured by fair value with its changes included in current profits and losses.

Financial assets are measured at fair value upon initial recognition. For financial assets measured at fair value with its changes included in the current profits and losses, relevant transaction costs are directly included in the current profits and losses; For financial assets of other types, relevant transaction costs are included in the initial recognition amount. If the accounts receivable initially recognized by the Company do not contain significant financing components as defined in the Accounting Standards for Business Enterprises No.14-Income, or the financing components in contracts with a duration of no more than one year are not considered according to the provisions of Accounting Standards for Business Enterprises No.14-Income, the initial measurement shall be made according to the transaction price of the consideration expected to be charged.

(1) Financial assets measured in amortized cost

The Company's business model of managing such financial assets is to collect contract cash flow, and the cash flow generated on a specific date is only for the payment of principal and interest based on the unpaid principal amount. For such financial assets, the Company adopts the effective interest rate method for subsequent measurement according to amortized cost, and the gains or losses arising from amortization or impairment are included in the current profits and losses.

(2) Financial assets measured at fair value with changes included in other comprehensive income

The Company's business model of managing such financial assets is to collect contract cash flow and sell it, and the cash flow generated on a specific date is only for the payment of principal and interest based on the unpaid principal amount. Such financial assets are measured at fair value with changes included in other

comprehensive income, but impairment losses or gains, exchange gains and losses and interest income calculated according to the effective interest rate method are included in current profits and losses.

For the investment in non-transactional equity instruments, the Company can irrevocably designate it as a financial asset measured at fair value with changes included in other comprehensive income at the initial recognition. The designation is made on the basis of a single investment, and the relevant investment conforms to the definition of equity instrument from the issuer's point of view. The Company includes the relevant dividend income of such financial assets in the current profits and losses, and the changes in fair value in other comprehensive income. When the financial asset is derecognized, the accumulated gains or losses previously included in other comprehensive income will be transferred from other comprehensive income to retained income and will not be included in the current profits and losses.

(3) Financial assets measured at fair value with changes included in the current profits and losses

Except for the above financial assets measured in amortized cost and the financial assets measured at fair value with changes included in other comprehensive income, the Company classifies all other financial assets as financial assets measured at fair value with changes included in current profits and losses. In addition, at the time of initial recognition, in order to eliminate or significantly reduce the accounting mismatch, the Company designated some financial assets as the financial assets measured at fair value with changes included in the current profits and losses. Such financial assets are subsequently measured at fair value, with changes in fair value included in current profits and losses.

2. Classification, recognition basis and measurement method of financial liabilities

The Company's financial liabilities are classified into financial liabilities measured at fair value with changes included in current profits and losses and other financial liabilities at initial recognition. For financial liabilities measured at fair value with changes included in the current profits and losses, the related transaction costs are directly included in the current profits and losses, and the related transaction costs of other financial liabilities are included in their initial recognition amount.

(1) Financial liabilities measured at fair value with changes included in the current profits and losses

Financial liabilities measured at fair value with changes included in current profits and losses include transactional financial liabilities (including derivatives belonging to financial liabilities) and financial liabilities designated as measured at fair value with changes included in current profits and losses.

Transactional financial liabilities (including derivatives belonging to financial liabilities) are subsequently measured at fair value, and changes in fair value are included in current profits and losses, except those related to hedging accounting.

For financial liabilities that are designated as being measured at fair value with changes included in current profits and losses at the time of initial recognition, the changes in fair value caused by changes in the Company's own credit risk are included in other comprehensive income, and when the liability is derecognized, the accumulated changes in its fair value caused by changes in its own credit risk included in other comprehensive income are transferred to retained income. Other changes in fair value are included in current profits and losses. If the accounting mismatch in profit and loss will be caused or enlarged by handling the impact of the changes in credit risk of these financial liabilities in the above way, the Company will include all the gains or losses of the financial liabilities (including the amount affected by the changes in the enterprise's credit risk) in the current profits and losses.

(2) Other financial liabilities

Other financial liabilities, except those caused by the transfer of financial assets and financial guarantee contracts that do not meet the conditions for derecognition or continue to be involved in the transferred financial

assets, are classified as financial liabilities measured in amortized cost and subsequently measured in amortized cost. The gains or losses arising from derecognition or amortization are included in the current profits and losses.

3. Methods for determining the fair value of financial assets and financial liabilities

The fair value of financial instruments with an active market shall be determined by the quotation in the active market. The fair value of financial instruments without active market shall be determined by valuation technology. At the time of valuation, the Company adopts the valuation technology that is applicable in the current situation and supported by sufficient available data and other information, selects the input values that are consistent with the characteristics of assets or liabilities considered by market participants in the transaction of relevant assets or liabilities, and gives priority to the relevant observable input values. Unobservable input values can only be used if the relevant observable input values are unavailable or impracticable.

4. Recognition basis and measurement method for transfer of financial assets Recognition for transfer of financial assets

C	ircumstances	Recognition results			
Almost all risks and rewards transferred	in the ownership of financial assets are	The financial assets are derecognized (new			
Almost all risks and rewards in the ownership of	The control of financial assets is given up	assets/liabilities are recognized)			
financial assets are neither transferred nor retained	The control of financial assets is not given up The relevant assets and liabilities is recognized according to the extent of continuing involvement transferred financial assets				
Almost all risks and rewards in the ownership of financial assets are retained	Continue to recognize the financial asseliabilities	ets and recognize the received consideration as financial			

The Company divides the transfer of financial assets into the overall transfer and partial transfer of financial assets.

- (1) If the overall transfer of financial assets meets the conditions for derecognition, the difference between the following two amounts shall be included in the current profits and losses: the book value of the transferred financial assets on the derecognition date; The sum of the consideration received for the transfer of financial assets and the cumulative amount of changes in fair value that were originally directly included in other comprehensive income (the financial assets involved in the transfer are those classified as financial assets measured at fair value with changes included in other comprehensive income in Article 18 of Accounting Standards for Business Enterprises No.22-Recognition and Measurement of Financial Instruments).
- (2) If a part of the financial assets is transferred, and the transferred part as a whole meets the conditions for derecognition, the book value of the whole financial assets before the transfer shall be allocated between the derecognition part and the continued recognition part (in this case, the retained service assets shall be regarded as part of continued recognition of financial asset) according to their respective relative fair values on the date of transfer, and the difference between the following two amounts shall be included in the current profits and losses: the book value of the derecognition part on the derecognition date; The sum of the consideration received for the derecognition part (including all new assets acquired minus all new liabilities assumed) and the corresponding derecognition amount in the accumulated amount of changes in fair value originally included in other comprehensive income (the financial assets involved in partial transfer are those classified as financial assets measured at fair value with changes included in other comprehensive income in Article 18 of Accounting Standards for Business Enterprises No.22-Recognition and Measurement of Financial Instruments).

If the transfer of financial assets does not meet the conditions for derecognition, the whole transferred financial assets shall be continuously recognized, and the received consideration shall be recognized as a financial liability.

5. Conditions for derecognition of financial liabilities

If the current obligations of financial liabilities(or part of them) have been discharged, the financial liabilities (or part of them) shall be derecognized. If the following conditions exist:

- (1) If the Company transfers the assets used to pay financial liabilities to an institution or establishes a trust, and the obligation of debt payment still exists, it shall not derecognize the financial liabilities.
- (2) The Company (the borrower) and the lender sign an agreement to replace the original financial liabilities (or part of them) by taking on new financial liabilities, and the contractual terms are essentially different. The Company shall derecognize the original financial liabilities (or part of them) and recognize a new financial liability at the same time.

If the financial liabilities (or part of them) are derecognized, the Company will record the difference between the book value and the consideration paid (including the transferred non-cash assets or liabilities) into the current profits and losses.

- 6. Impairment of financial assets
- (1) Recognition method of impairment provision

The Company conducts impairment accounting treatment on financial assets (including receivables) measured in amortized cost, debt instrument investment and lease receivables measured at fair value with changes included in other comprehensive income on the basis of expected credit losses, and recognizes the loss provisions. In addition, for contract assets, loan commitments and financial guarantee contracts, impairment provisions are also accrued and impairment losses are recognized in accordance with the accounting policies described in this section.

Expected credit loss refers to the weighted mean of credit loss of financial instruments weighted by the risk of default. Credit loss refers to the difference between all contracted cash flows that the Company discounted at the original actual interest rate and all cash flows that it is expected to receive, that is, the present value of all cash shortages.

Except for the purchased or originated financial assets with credit impairment, the Company evaluates whether the credit risk of relevant financial assets has increased significantly since the initial recognition on each balance sheet date. If the credit risk has not increased significantly since the initial recognition, it is in the first stage, and the Company will measure the loss provision according to the amount equivalent to the expected credit loss of the financial asset in the next 12 months; If the credit risk has increased significantly since the initial recognition but with no credit impairment, it is in the second stage, and the Company will measure the loss provision according to the amount equivalent to the expected credit loss of the financial asset during the whole duration; If the financial asset has suffered credit impairment since its initial recognition, it is in the third stage, and the Company will measure the loss provision according to the amount equivalent to the expected credit loss of the financial asset in the whole duration. When evaluating the expected credit loss, the Company considers the reasonable and well-founded information, including forward-looking information, about past events, current situation and future economic situation prediction that can be obtained on the balance sheet date without unnecessary extra cost or effort.

The expected credit loss in the next 12 months refers to the expected credit loss caused by financial asset default events that may occur within 12 months after the balance sheet date (if the expected duration of financial assets is less than 12 months, within the expected duration), which is a part of the expected credit loss in the whole duration.

For financial instruments with low credit risk on the balance sheet date, the Company assumes that the credit risk has not increased significantly since the initial recognition, and chooses to measure the loss provision according to the expected credit loss in the next 12 months.

For the financial assets in the first and second stages and with low credit risk, the Company calculates the interest income according to the book balance without deducting the impairment provision and the actual interest rate. For the financial assets in the third stage, the interest income shall be calculated according to the book balance minus the amortized cost and the actual interest rate after the impairment provision has been accrued.

(2) Financial asset with impairment

When the Company anticipates that one or more events that have an adverse effect on the future cash flow of a financial asset occur, the financial asset becomes a financial asset with credit impairment. Evidence of credit impairment of financial assets includes the following observable information:

- A. The issuer or the debtor has major financial difficulties;
- B. The debtor has breached the contract, such as default or overdue payment of interest or principal;
- C. The creditor makes concessions to the debtor that it will not make under any other circumstances due to economic or contractual considerations related to its financial difficulties;
 - D. The debtor is likely to go bankrupt or carry out other financial restructuring;
- E. The financial difficulties of the issuer or debtor lead to the disappearance of the active market of the financial asset;
- F. A financial asset is purchased or originated at a large discount, which reflects the fact that credit loss has occurred.

Credit impairment of financial assets may be caused by the joint action of multiple events, not necessarily by an event that can be identified separately.

(3) Financial assets with credit impairment purchased or originated

For the purchased or originated financial assets with credit impairment, the Company only recognizes the cumulative change of expected credit loss in the whole duration after initial recognition as loss provision on the balance sheet date. On each balance sheet date, the change amount of expected credit loss during the whole duration is included in the current profits and losses as impairment loss or gain. Even if the expected credit loss determined on the balance sheet date is less than the amount of the expected credit loss reflected by the estimated cash flow at the time of initial recognition, the favorable change of expected credit loss will be recognized as impairment gain.

(4) Criteria for judging significant increase in credit risk

If the default probability of a financial asset in the estimated duration determined on the balance sheet date is significantly higher than that in the estimated duration determined at the initial recognition, it indicates that the credit risk of the financial asset is significantly increased. Except in special circumstances, the Company uses the change of default risk in the next 12 months as a reasonable estimate of the change in default risk in the whole duration to determine whether the credit risk has increased significantly since the initial recognition.

(5) Method of evaluating the expected credit loss of financial assets

The Company evaluates the expected credit loss of financial assets based on individual and combined items. It individually evaluates the credit risk of financial assets with significantly different credit risks, such as: receivables from related parties; accounts receivable from government agencies and units; and receivables with obvious signs that the debtor is likely to be unable to fulfill the repayment obligations.

Except for financial assets whose credit risks are individually evaluated, the Company divides financial assets into different groups based on common risk characteristics, and evaluates the credit risks on the basis of combination.

(6) Accounting treatment method for impairment of financial assets

The Company calculates the expected credit losses of various financial assets on the balance sheet date, and the resulting increase or reversal amount of loss provision is included in the current profits and losses as impairment losses or gains.

If the Company actually suffers from credit losses, and the relevant financial assets are determined to be irrecoverable and approved for write-off, the book balance of the financial assets will be directly written down. If the financial assets written down are recovered later, they will be included in the current profits and losses of recovery as the reversal of impairment losses.

7. Financial guarantee contract

A financial guarantee contract refers to a contract in which the issuer pays a certain amount to the contract holder who has suffered losses when the debtor fails to repay the debt according to the original or revised terms of the debt instrument at maturity. The financial guarantee contract shall be measured at fair value upon initial recognition. For the financial guarantee contract for a financial liability not designated as being measured at fair value with changes included into the current profits and losses, after the initial recognition, subsequent measurement shall be made according to the higher of the expected credit loss provision amount determined on the balance sheet date and the balance of the initial recognition amount after deducting the accumulated amortization amount determined according to the income recognition principle.

8. Offset of financial assets and financial liabilities

Financial assets and financial liabilities are listed separately in the balance sheet without mutual offset. However, if the following conditions are met at the same time, the net amount after mutual offset shall be listed in the balance sheet:

- (1) The Company has the legal right to offset the recognized financial assets and financial liabilities, and such legal right is now enforceable;
- (2) The Company plans to settle accounts by netting, or realize the financial assets and pay off the financial liabilities at the same time.

9. Equity instruments

Equity instruments refer to contracts that can prove that the Company has residual interests in assets after deducting all liabilities. The issuance (including refinancing), repurchase, sale or cancellation of equity instruments by the Company are treated as changes in equity. The Company does not recognize changes in the fair value of equity instruments. Transaction costs related to equity transactions are deducted from equity.

Various distributions (excluding stock dividends) made by the Company to holders of equity instruments are used as profit distribution to reduce the owners' equity. The stock dividends distributed do not affect the total owners' equity.

12. Note receivable

The Company measures the loss provision for notes receivable according to the expected credit loss amount of the whole duration.

Except for the notes receivable whose credit risk is evaluated individually, the Company divides the notes receivable into different portfolios based on the credit risk of their acceptors as a common risk characteristic, and calculates the expected credit loss on the basis of the portfolios. The basis for determining the portfolios is as follows:

Portfolio name	Basis for determining the portfolio
I Bank acceptance bill	Management evaluation has low credit risk and the expected credit loss is generally not recognized

Commercial acceptance bill	Same as "Accounts Receivable" portfolio
----------------------------	---

The Company individually tests the impairment of the notes receivable with objective evidence and other notes that are suitable for individual evaluation, recognizes the expected credit loss, and calculates the individual impairment provision.

13. Account receivable

The CBC adopts the simplified model of expected credit loss for accounts receivables specified in "Accounting Standards for Business Enterprises No.14 - Revenue" and without containing significant financing components (including the case that the financing components in contracts that do not exceed one year are not considered according to the standards), that is, always measures their loss provisions according to the amount of expected credit loss during the entire duration, and the resulting increased or reversed amount of the loss provision is included in the current profit and loss as an impairment loss or gain.

Based on common risk characteristics, the Company divides accounts receivable into different groups according to common credit risk characteristics such as customer categories:

Portfolio name	Basis for determining the portfolio
Individual identification portfolio	Commercial acceptance bills receivable, accounts receivable and other receivables with significant single amount (receivables with an ending balance of more than RMB 5 million (including RMB 5 million)), or accounts receivable with insignificant individual amount but high risk
Aging portfolio	Taking the aging of receivables as the credit risk characteristic
Related-party portfolio receivable	Receivables from related parties

- (1) Individual identification portfolio: For receivables with an ending balance of more than RMB 5 million (including RMB 5 million), or accounts receivable with insignificant individual amount but high risk, impairment test shall be conducted separately for each customer. Impairment test shall be conducted separately for accounts receivable with objective evidence indicating impairment and other accounts receivable applicable to individual evaluation (such as accounts receivable in dispute with the other party or involving litigation and arbitration; accounts receivable with obvious signs that the debtor is likely to be unable to fulfill the repayment obligations, etc.), to recognize expected credit loss and calculate individual impairment provision.
- (2) Aging portfolio: For accounts receivable that have not been impaired after individual testing or whose individual amount is not significant but with low risk, the Company evaluates the expected credit loss of various accounts receivable based on the actual loss rate of the same or similar accounts receivable portfolio with similar credit risk characteristics in previous years.
- (3) Associated portfolio: Unless there is conclusive evidence indicating an impairment, the accounts receivable formed between related parties shall not be accrued for bad debt provision.

14. Receivable financing

Receivable financing reflects notes receivable and accounts receivable that are measured at fair value on the balance sheet date with changes included in other comprehensive income. For the accounting treatment method, please refer to the related treatment of the financial assets measured at fair value with changes included in other comprehensive income classified in Item (XI) Financial Instrument of this accounting policy.

15. Other account receivable

Determination method and accounting treatment of the expected credit loss of other account receivable

For other receivables, the expected credit loss is determined according to historical data and forward-looking information. Based on whether the credit risk of other receivables has increased significantly since the initial recognition, the Company adopts the amount equivalent to the expected credit loss in the next 12 months or the whole duration to measure the impairment loss. For specific accounting treatment methods, please refer to Item (XIII) Accounts Receivable of this accounting policy.

16. Contractual assets

Contract assets refer to the right that the Company has transferred the goods to customers and has the right to receive consideration, and such right depends on other factors besides the passage of time.

17. Inventory

The Company shall comply with the disclosure requirement of jewelry-related industries in the "Shenzhen Stock Exchange Self-Regulatory Guidelines for Listed Companies No. 3- Industry Disclosure"

(1) Classification of inventory

The CBC classifies the inventory into raw materials, goods in process, goods on hand, wrap page, low value consumables, materials for consigned processing and goods sold, etc.

(2) Valuation of inventories

Inventories are initially measured at cost upon acquisition, which includes procurement costs, processing costs and other costs. Cost of the inventory issued is carried forward on the basis of a combination of the weighted average method and specific identification when inventories are issued.

(3)Inventory system

Perpetual inventory system is adopted.

- (4) Amortization method of low-value consumables and packaging materials
- "One-time amortization method" is adopted for accounting.

(5) Provision for inventory impairment

When a comprehensive count of inventories is done at the end of the period, provision for inventory impairment is allocated or adjusted using the lower of the cost of inventory and the net realizable value. The net realizable value of stock in inventory (including finished products, goods in stock and materials for sale) that can be sold directly is determined using the estimated saleable price of such inventory deducted by the cost of sales and relevant taxation over the course of ordinary production and operation. The net realizable value of material in inventory that requires processing is determined using the estimated saleable price of the finished product deducted by the cost to completion, estimated cost of sales and relevant taxation over the course of ordinary production and

operation. The net realizable value of inventory held for performance of sales contract or labor service contract is determined based on the contractual price; in case the amount of inventory held exceeds the contractual amount, the net realizable value of the excess portion of inventory is calculated using the normal saleable price.

Provision for impairment is made according to individual items of inventories at the end of the period; however, for inventories with large quantity and low unit price, the provision is made by categories; inventories of products that are produced and sold in the same region or with the same or similar purpose or usage and are difficult to be measured separately are combined for provision for impairment.

If the factors causing a previous write-off of inventory value has disappeared, the amount written-off is reversed and the amount provided for inventory impairment is reversed and recognized in profit or loss for the period.

During the reporting period, the specific methods and implementation of the Company's inventory impairment measurement are as follows:

(1) Inventory impairment method

The issuer's inventory mainly includes raw materials, inventory goods and materials commissioned for processing. The ending inventory of the Company is measured according to the lower of cost and net realizable value. When the net realizable value is lower than the cost, the inventory depreciation provision is accrued.

①Specific methods for measuring the impairment of raw materials

Raw materials mainly include gold and diamond raw materials. The closing net realizable value of gold raw materials is determined according to the closing price of spot gold trading announced by Shanghai Gold Exchange at the end of the period. For the part with the book cost higher than the closing net realizable value, inventory depreciation provision is accrued; Diamond raw materials are used for processing finished diamond inlaid products, but the finished diamond inlaid products are with great difference. At the end of the year, the Company will comprehensively judge whether there are signs of impairment based on the price fluctuation of diamonds in that year, processing rates and pricing policies, and if there are signs of impairment, it will measure the impairment one by one.

2 Specific methods for measuring the impairment of inventory goods

Inventory goods mainly include finished gold products, finished K-gold products and finished inlaid products. The depreciation of finished gold products and finished K-gold products shall be measured one by one, and the closing net realizable value shall be determined by referring to the sales outbound price at the end of the period after deducting the relevant sales expenses and taxes. For finished products whose closing book cost is higher than the net realizable value, the inventory depreciation provision shall be accrued. The finished inlaid products are quite different. At the end of the period, the Company will comprehensively judge whether there are signs of impairment according to the price fluctuation of diamonds in that year and the pricing policy. If there are signs of impairment, the impairment will be measured one by one.

3 Specific methods for measuring the impairment of materials commissioned for processing

Materials commissioned for processing mainly include gold and diamond raw materials, which are similar in nature to raw materials, so the measurement method is consistent with that of raw materials.

18. Assets held for sale

1. Basis for classification as non-current assets held for sale or disposal group

If the book value of an non-current asset is recovered mainly through sales (including the exchange of non-monetary assets with commercial substance) rather than continuous use or disposal group, the Company will classify it as held for sale. The specific standard is to meet the following conditions at the same time:

(1) According to the practice of sales of such assets or disposal groups in similar transactions, they can be sold immediately under the current situation;

(2) The Company has made a resolution on a sale plan and obtained a firm purchase commitment. It is expected that the sale will be completed within one year (if the relevant regulations require the approval of the relevant authority or regulatory department of the Company before the sale, such approval has been obtained).

If the control right of the subsidiary is lost due to the sale of the investment in the subsidiary, regardless of whether part of the equity investment is retained after the sale and the conditions for classification of the held-for-sale category are met, the investment in the subsidiary as a whole will be classified as held-for-sale category in the individual financial statements of the parent company, and all assets and liabilities of the subsidiary will be classified as held-for-sale category in the consolidated financial statements.

2. Accounting treatment of non-current assets or disposal groups held for sale

When the Company initially measures or re-measures the non-current assets or disposal groups held for sale on the balance sheet date, if the book value is higher than the net amount of fair value minus the sale expenses, the book value will be written down to the net amount of fair value minus the sale expenses, and the written-down amount will be recognized as asset impairment loss and included in the current profits and losses, and impairment provision of assets held for sale will be accrued at the same time. If the net amount of the fair value of non-current assets held for sale on the subsequent balance sheet date is increased after deducting the sale expenses, the previously written-down amount will be restored and reversed within the amount of asset impairment loss recognized after being classified as held for sale, and the reversed amount will be included in the current profits and losses. Assets impairment losses recognized before being classified as held for sale shall not be reversed.

For the amount of asset impairment loss recognized by the disposal group held for sale, the book value of goodwill in the disposal group shall be deducted first, and then the book value of non-current assets in the disposal group shall be deducted proportionally according to the proportion of the book value of non-current assets in the disposal group. For the subsequent reversal amount of asset impairment losses recognized by the disposal group held for sale, the book value will be increased in proportion according to the proportion of the book value of non-current assets except goodwill in the disposal group.

Non-current assets held for sale or non-current assets in disposal group are not depreciated or amortized, and interest and other expenses of liabilities in disposal group held for sale continue to be recognized.

When the Company derecognizes the non-current assets held for sale or disposal groups, the unrecognized gains or losses will be included in the current profits and losses.

When non-current assets or disposal groups are no longer classified as held for sale because they no longer meet the classification conditions of held for sale, or non-current assets are removed from the disposal groups held for sale, the measurement shall be based on the lower of the following two amounts:

- (1) For the book value before being classified as held for sale, the adjusted amount based on depreciation, amortization or impairment that should have been recognized if it is not classified as held for sale;
 - (2) Recoverable amount.
 - 3. Determination standard and presentation method of discontinued operation

Discontinued operations refers to a component that meets any of the following conditions and can be distinguished separately and has been disposed of by the Company or classified as a component held for sale:

- (1) This component represents an independent main business or a single main business area;
- (2) This component is part of an associated plan to dispose of an independent main business or a separate main business area;
 - (3) This component is a subsidiary acquired exclusively for resale.

For the discontinued operation listed in the current period, the Company separately lists the profit and loss of continuing operation and the profit and loss of discontinued operation in the current income statement, and

re-lists the information originally listed as the profit and loss of continuing operation as the profit and loss of discontinued operation in comparable accounting period in the income statement of the comparative period.

19. Debt investment

For debt investment, the Company determines the expected credit loss on each balance sheet date according to the types of counterparties and risk exposures and in consideration of historical default and industry forward-looking information or various external actual and expected economic information. For the determination method and accounting treatment method of expected credit loss, please refer to the provisions of Item (XI) Financial Instruments of this accounting policy.

20. Other debt investment

For Other debt investment, the Company determines the expected credit loss on each balance sheet date according to the types of counterparties and risk exposures and in consideration of historical default and industry forward-looking information or various external actual and expected economic information. For the determination method and accounting treatment method of expected credit loss, please refer to the provisions of Item (XI) Financial Instruments of this accounting policy.

21. Long-term account receivable

The Company's long-term receivables include receivable financial lease and other long-term receivables.

For the receivable financial lease formed by the transactions regulated in Accounting Standards for Business Enterprises No.21-Lease, the loss provision shall be measured according to the amount equivalent to the expected credit loss during the whole duration.

For other long-term receivables, the Company determines the expected credit loss on each balance sheet date according to the types of counterparties and risk exposures and in consideration of historical default and reasonable forward-looking information or various external actual and expected economic information.

Based on whether the credit risk has increased significantly since the initial recognition, the Company adopts the amount equivalent to the expected credit loss in the next 12 months or the whole duration to measure the impairment loss of long-term receivables. Except for the long-term receivables whose credit risk is evaluated individually, they are divided into different portfolios based on their credit risk characteristics:

Portfolio name	Basis for determining the portfolio
Normal long-term receivables	This portfolio is a long-term receivable with no overdue risk
Overdue long-term receivables	This portfolio is a long-term receivable with high overdue risk

22. Long-term equity investment

1. Basis for determining joint control and significant influence on the investee

Joint control refers to the common control of an arrangement according to the relevant agreement, and that the related activities of the arrangement must be unanimously agreed by the participants who share the control rights before making decisions. When judging whether there is joint control, firstly, it is judged whether all participants or a group of participants collectively control the arrangement. If all participants or a group of participants must act in concert to decide the related activities of an arrangement, it is considered that all participants or a group of participants collectively control the arrangement. Secondly, it is judged whether the decision of the related activities of the arrangement must be unanimously agreed by the participants who collectively control the arrangement, and joint control can only be formed if and only if the decision of the related activities requires the unanimous consent of the participants who collectively control the arrangement. If there are two or more participants who can collectively control an arrangement, it does not constitute joint control. When judging whether there is joint control, the protective rights enjoyed are not considered.

Significant influence refers to that the investor has the right to participate in the decision-making of the financial and operating policies of the investee, but it cannot control or jointly control the formulation of these policies with other parties. When determining whether a significant influence can be exerted on the investee, consider the influence of the investor's direct or indirect holding of the voting shares of the investee and the potential voting rights held by the investor and other parties in the current period after it is assumed to be converted into the equity of the investee, including the influence of the current convertible warrants, stock options and convertible corporate bonds issued by the investee. When foreign investment meets the following conditions, it is generally determined that it has a significant impact on the investing unit: ① It is represented in the Board of Directors or similar authority of the investee; ② It participates in the formulation of the financial and business policies of the investee; ③ Important transactions with the investee occur; ④ Management personnel are sent to the investee; ⑤ Key technical data is provided to the investee. When directly or indirectly owning more than 20% but less than 50% of the voting shares of the investee, it is generally considered to have a significant impact on the investee.

- 2. Determination of initial investment cost
- (1) Long-term equity investment formed by business merger

A. In the case of business merger under the same control, if cash payment, transfer of non-cash assets or taking on debts and issuance of equity securities are adopted as the merger consideration, the initial investment cost of long-term equity investment shall be the share of the book value of the owners' equity of the merged party in the consolidated financial statements of the final controlling party on the date of merger. If the investee under the same control can be controlled due to additional investment and other reasons, the initial investment cost of long-term equity investment shall be determined according to the share of the net assets of the merged party in the book value of the consolidated financial statements of the final controlling party on the date of merger. For the difference between the initial investment cost of the long-term equity investment on the date of merger and the book value of the long-term equity investment before the merger plus the book value of the newly paid consideration for the shares on the date of merger, adjust the capital premium or share capital premium. If the capital premium or share capital premium is insufficient to offset, the retained income will be offset.

B. For the business merger not under the same control, the merger cost shall be determined as the initial investment cost of long-term equity investment on the date of purchase in accordance with the relevant provisions of the Accounting Standards for Business Enterprises No.20-Business Merger. If the investees not under the same control can be controlled due to additional investment and other reasons, the sum of the book value of the original equity investment plus the new investment cost shall be taken as the initial investment cost calculated by the cost method.

(2) In addition to the long-term equity investment formed by business merger, the initial investment cost of long-term equity investment obtained by other means shall be determined in accordance with the following provisions:

- A. For long-term equity investment obtained by paying cash, the initial investment cost shall be the actual purchase price. The initial investment cost includes expenses, taxes and other necessary expenses directly related to obtaining long-term equity investment.
- B. For long-term equity investment obtained by issuing equity securities, the initial investment cost shall be the fair value of issuing equity securities.
- C. For long-term equity investment obtained by exchange of non-monetary assets, the initial investment cost shall be determined in accordance with the Accounting Standards for Business Enterprises No.7-Exchange of Non-monetary Assets.
- D. For long-term equity investment obtained by debt restructuring, its initial investment cost shall be determined in accordance with the Accounting Standards for Business Enterprises No.12-Debt Restructuring.
 - 3. Subsequent measurement and profit and loss recognition method
- (1) Accounting by cost method: Long-term equity investment that can be controlled by the investee shall be accounted by cost method. When accounting by cost method, the cost of long-term equity investment is adjusted by adding or recovering investment. For the long-term equity investment accounted by the cost method, except for the declared but undistributed cash dividends or profits included in the price or consideration actually paid at the time of investment, the Company shall recognize the investment income according to the cash dividends or profits declared by the investee, and no longer distinguish whether it belongs to the net profit realized by the investee before and after the investment.
- (2) Accounting by equity method: For the long-term equity investment jointly controlled or significantly influenced by the investee, except for the equity investment in the associated enterprise, part of it is indirectly held by venture capital institutions, mutual funds, trust companies or similar entities including investment with insurance funds, regardless of whether the above entities have a significant influence on this part of the investment, the Company to measure this part of the indirectly held investment at fair value with its changes included in profits and losses in accordance with the relevant provisions of Accounting Standards for Business Enterprises No.22-Recognition and Measurement of Financial Instruments, and adopts the equity method for accounting. When accounting by equity method, after the Company obtains the long-term equity investment, the investment income and other comprehensive income are recognized respectively according to the share of the net profit and loss and other comprehensive income realized by the investee, and the book value of the longterm equity investment is adjusted; The Company shall calculate its share according to the profit or cash dividend declared by the investee, and correspondingly reduce the book value of long-term equity investment; The Company shall adjust the book value of the long-term equity investment and include it in the owners' equity for other changes in the owners' equity of the investee except the net profit and loss, other comprehensive income and profit distribution. The Company recognizes the net loss of the investee to the extent that the book value of the long-term equity investment and other long-term rights and interests that substantially constitute the net investment of the investee are written down to zero, unless the Company has the obligation to bear additional losses. If the investee realizes the net profit in the future, the Company will resume the recognition of the income share after the income share makes up for the unrecognized loss share. When recognizing the share of the net profit and loss of the investee, the Company will adjust the net profit of the investee based on the fair value of the identifiable assets of the investee at the time of investment, and offset the gains and losses of internal transactions between the Company and associated enterprises and joint ventures, and recognize the investment profit and loss on this basis. The internal transaction losses between the Company and the investee shall be recognized in full if they belong to asset impairment losses according to the Accounting Standards for Business Enterprises No.8-Asset Impairment. If the accounting policies and accounting periods adopted by the investee are inconsistent with those of the Company, the financial statements of the investee shall be adjusted

according to the accounting policies and accounting periods of the Company, so as to recognize the investment profits and losses.

Long-term equity investments in associated enterprises and joint ventures held before the first execution date, if there is any debit difference of equity investments related to the investment, shall be amortized by the original remaining term straight-line method, and the amortized amount shall be included in the current profits and losses.

(3) When disposing of long-term equity investment, the difference between its book value and the actual purchase price is included in the current profits and losses. If the long-term equity investment accounted by equity method is included in the owners' equity due to other changes in the owners' equity of the investee except the net profit and loss, the part originally included in the owners' equity will be transferred to the current profits and losses in proportion when disposing of the investment, except for other comprehensive income arising from the investee's re-measurement of the changes in defined benefit plan net liabilities or net assets.

23. Investment real estate

Investment real estate refers to real estate held to earn rent or capital appreciation, or both. It includes leased land use rights, land use rights held and ready to be transferred after appreciation, and leased buildings. When the Company can obtain rental income or value-added income related to investment real estate and the cost of investment real estate can be measured reliably, the Company will initially measure it according to the actual expenditure of purchase or construction.

The Company adopts the cost model to measure the investment real estate on the balance sheet date. Under the cost model, the Company measures the investment real estate and makes depreciation or amortization in accordance with the provisions of Item (23) Fixed Assets and Item (26) Intangible Assets of this accounting policy. When the investment real estate is disposed of, or permanently withdrawn from use, and it is not expected to obtain economic benefits from its disposal, the recognition of the investment real estate shall be terminated. When the Company sells, transfers, scraps or damages the investment real estate, the amount of disposal income after deducting its book value and relevant taxes shall be included in the current profits and losses.

24. Fixed assets

(1) Recognition conditions

Fixed assets refer to tangible assets with a service life of more than one fiscal year, which are held for producing goods, providing labor services, leasing or managing.

(2) Depreciation methods

Category	Method	Years of depreciation	Scrap value rate	Yearly depreciation rate
Houses and buildings	Straight-line depreciation	20	0.1	0.045
Machinery equipment	Straight-line depreciation	10	0.1	0.09
Transportation equipment	Straight-line depreciation	5	0.1	0.18
Electronic equipment and others	Straight-line depreciation	5	0.1	0.18

At the end of each year, the company rechecks the service life, estimated net salvage and depreciation method of fixed assets.

25. Construction in progress

The construction in progress is measured according to the actual cost, which includes all necessary project expenditures incurred during the construction period, borrowing costs that should be capitalized before the project reaches the scheduled serviceable state, and other related expenses.

Construction in progress is carried forward to fixed assets when it reaches the scheduled serviceable state. The criteria for scheduled serviceable state shall meet one of the following conditions:

- (1) The physical construction (including installation) or production of fixed assets has been completely or substantially completed;
- (2) It has been put into trial production or trial operation, and the results show that the assets can normally produce qualified products, or the trial operation results show that it can operate or operate properly;
- (3) The amount of expenditure that continues to occur on fixed assets purchased, constructed or produced is very small or almost none;
- (4) The fixed assets purchased, constructed or produced have reached the design or contract requirements, or are basically in line with the design or contract requirements.

26. Borrowing expenses

1. Recognition principle of capitalization of borrowing costs

Borrowing costs include interest incurred by borrowing, amortization of discount or premium and auxiliary expenses, as well as exchange difference incurred by borrowing in foreign currency. If the borrowing costs incurred by the Company can be directly attributed to the purchase, construction or production of assets that meet the capitalization conditions, they shall be capitalized and included in the cost of relevant assets; Other borrowing costs shall be recognized as expenses when incurred according to the amount incurred, and included in the current profits and losses.

Assets eligible for capitalization include fixed assets, investment real estate, inventory and other assets that need to go through a long period of purchase, construction or production activities to reach the predetermined serviceable or saleable state.

Borrowing costs shall be capitalized when the following conditions are met at the same time:

- (1) Asset expenditure has occurred, including the expenditure occurred in the form of paying cash, transferring non-cash assets or undertaking interest-bearing debts for purchasing, constructing or producing assets that meet capitalization conditions;
 - (2) Borrowing costs have been incurred;
- (3) The purchase, construction or production activities necessary to make the assets reach the expected serviceable or saleable state have started.
 - 2. Period of capitalization of borrowing costs

Borrowing expenses incurred for purchasing, constructing or producing assets that meet the capitalization conditions, if they meet the above capitalization conditions and occur before the assets reach the predetermined serviceable or saleable state, shall be included in the cost of the assets; If the purchase, construction or production activities of the assets are abnormally interrupted for more than 3 months, the capitalization of borrowing costs shall be suspended and recognized as current expenses until the purchase, construction or production activities of the assets resume; When the purchased, constructed or produced assets reach the

predetermined serviceable or saleable state, the capitalization of their borrowing costs will be stopped. Borrowing costs incurred after reaching the intended serviceable or saleable state are directly included in financial expenses in the current period.

3. Calculation method of capitalized amount of borrowing costs

During the capitalization period, the capitalization amount of interest (including amortization of discount or premium) in each accounting period shall be determined in accordance with the following provisions:

- (1) Where a special borrowing is borrowed for the purpose of purchasing, constructing or producing assets that meet the capitalization conditions, it shall be determined by the actual interest expenses incurred in the current period of the special borrowing, minus the interest income obtained by depositing unused borrowing funds in the bank or the investment income obtained by temporary investment.
- (2) If the general borrowing is occupied for the purpose of purchasing, constructing or producing assets that meet the capitalization conditions, the interest amount that should be capitalized on the general loan shall be calculated and determined according to the weighted mean of the accumulated asset expenditure exceeding the special borrowing portion multiplied by the capitalization rate of the occupied general borrowing.

27. Biological assets

Nil

28. Oil and gas asset

Nil

29. Intangible assets

(1) Service life and its determination basis, estimation, amortization method or review procedure

1. Service life and its determination basis, estimation, amortization method or review procedure

Intangible assets are measured at actual cost. The cost of outsourced intangible assets includes the purchase price, relevant taxes, and other expenses directly attributable to making the assets reach the intended use. If intangible assets are purchased by installment, and the purchase price of intangible assets exceeds the normal credit conditions and actually with financing nature, the cost of intangible assets is the present value of the purchase price. The cost of intangible assets invested by investors shall be determined according to the value agreed in the investment contract or agreement is unfair, it shall be recorded according to the fair value of intangible assets. For intangible assets obtained by exchange of non-monetary assets, the initial investment cost shall be determined in accordance with the Accounting Standards for Business Enterprises No.7-Exchange of Non-monetary Assets. For intangible assets obtained by debt restructuring, its initial investment cost shall be determined in accordance with the Accounting Standards for Business Enterprises No.12-Debt Restructuring. For intangible assets acquired by merger of enterprises under the same control, their entry value shall be determined according to the book value of the merged party; For intangible assets acquired by merger of enterprises not under the same control, their entry value shall be determined at the fair value.

The Company analyzes and judges the service life of intangible assets when acquiring them, and divides them into intangible assets with limited service life and intangible assets with uncertain service life. Intangible assets with limited service life shall be amortized within the expected service life by adopting the amortization method that can reflect the expected realization mode of economic benefits related to such assets from the time when the intangible assets are available for use; If the expected realization mode cannot be reliably determined, straight-line amortization method shall be adopted.

Amortization method, service life, determination basis and residual rate of various intangible assets with limited service life:

Category	Amortization method	Service life (year)	Determination basis	Residual rate (%)
Land use right	Straight-line method	40-50 years	Statutory term/registration term of land use certificate	0.00
Trademark right	Straight-line method	10 years	Statutory term	0.00
Software	Straight-line method	2-10 years	Benefit period/contract period	0.00
Patent	Straight-line method	5-10 years	Benefit period/contract period	0.00
Non-patent technology	Straight-line method	5-10 years	Benefit period/contract period	0.00
Industrial property rights and proprietary technology	Straight-line method	10 years	Benefit period/contract period	0.00
Others	Straight-line method	5-10 years	Benefit period/contract period	0.00

At the end of each year, the Company reviews the service life and amortization method of intangible assets with limited service life. If the service life and amortization method of intangible assets are different from those previously estimated, the amortization period and amortization method shall be changed.

The Company regards intangible assets with unpredictable future economic benefits as intangible assets with uncertain service life, and does not amortize intangible assets with uncertain service life. The Company reviews the service life of intangible assets with uncertain service life in each accounting period. If there is evidence that the service life of intangible assets is limited, its service life shall be estimate and treatment shall be carried out according to the above provisions.

Please refer to Item (27) Impairment of Long-term Assets in this accounting policy for details on the impairment test method and accrual method for impairment provision of intangible assets.

(2) Collection scope of R&D expenditure and related accounting treatment methods

R&D expenditure is directly related to R&D activities of the enterprise, including R&D employee compensation, direct input expenses, depreciation expenses and long-term deferred expenses, design expenses, equipment debugging expenses, intangible assets amortization expenses, commissioned external R&D expenses, and other expenses. The collection and calculation of R&D expenditure is based on the fact that relevant resources are actually invested in R&D activities. R&D expenditure includes expensed R&D expenditure and capitalized development expenditure.

The division standard of research stage expenditure and development stage expenditure of R&D projects: Research stage expenditure refers to the expenditure incurred by original planned investigation for acquiring and understanding new scientific or technical knowledge; Development stage expenditure refers to the expenditure incurred by applying research results or other knowledge to a plan or design to produce new or substantially improved materials, devices and products before commercial production or use.

Expenditures of intangible assets developed by the Company itself during the research stage of R&D projects are included in the current profits and losses when incurred. Expenditure in the development stage of

the development project can only be recognized as intangible assets if the following conditions are met at the same time:

- (1) It is technically feasible to complete the intangible assets so that they can be used or sold;
- (2) It has the intention to complete the intangible assets and use or sell them;
- (3) For the ways in which intangible assets generate economic benefits, including the ability to prove that the products produced by using the intangible assets exist in the market or the intangible assets themselves exist in the market, if the intangible assets will be used internally, their usefulness shall be proved;
- (4) It has sufficient technical, financial and other resources to support the development of the intangible assets, and has the ability to use or sell the intangible assets;
 - (5) Expenditure attributable to the development stage of the intangible assets can be reliably measured.

The expenditure in the development stage that has been expensed in the previous period is no longer adjusted.

30. Impairment of long-term assets

Long-term assets such as long-term equity investment, investment real estate measured by cost model, fixed assets, construction in progress, intangible assets and right-to-use assets, which show signs of impairment on the balance sheet date, shall be tested for impairment. If the impairment test results show that the recoverable amount of the asset is lower than its book value, the impairment provision shall be accrued according to the difference and included in the impairment loss. The recoverable amount is the higher of the net amount of the asset fair value after deducting the disposal expenses and the present value of the expected future cash flow of the asset. The asset impairment provision is calculated and recognized on the basis of individual assets. If it is difficult to estimate the recoverable amount of individual assets, the recoverable amount of the asset group shall be determined by the asset group to which the asset belongs. Asset group is the smallest asset portfolio that can generate cash inflow independently.

Goodwill shall be tested for impairment at least at the end of each year. The Company conducts goodwill impairment test, and the book value of goodwill formed by business merger is allocated to relevant asset groups according to reasonable methods from the date of purchase; If it is difficult to allocate to the relevant asset group, allocate it to the relevant asset group portfolio. When allocating the book value of goodwill to the relevant asset group or asset group portfolio, it shall be allocated according to the proportion of the fair value of each asset group or asset group portfolio to the total fair value of the relevant asset group or asset group portfolio. If it is difficult to reliably measure the fair value, it shall be apportioned according to the proportion of the book value of each asset group or asset group portfolio to the total book value of the relevant asset group or asset group portfolio. When carrying out impairment test on relevant asset groups or asset group portfolio containing goodwill, if there are signs of impairment on asset groups or asset group portfolio related to goodwill, first carry out impairment test on asset groups or asset group portfolio that do not contain goodwill, calculate the recoverable amount, and compare it with the relevant book value to recognize the corresponding impairment loss. Then carry out impairment test on the asset group or asset group portfolio containing goodwill, and compare the book value of these relevant asset groups or asset group portfolio (including the book value of the allocated goodwill) with its recoverable amount. If the recoverable amount of the relevant asset group or asset group portfolio is lower than its book value, recognize the impairment loss of goodwill.

Once the above-mentioned asset impairment losses are recognized, they will not be reversed in future accounting periods.

31. Long-term expenses to be apportioned

Long-term deferred expenses refer to the expenses that have been incurred by the Company but should be borne by the current period and subsequent periods with an amortization period of more than 1 year, including the improvement expenses of fixed assets rented by operating lease. Long-term deferred expenses shall be amortized evenly during the benefit period of relevant projects.

Category	Amortization years
Decoration and maintenance fee	3-6 years

32. Contractual liability

Contractual liabilities reflect the Company's obligation to transfer goods to customers for received or receivable consideration from customers. If the customer has paid the contract consideration or the Company has obtained the unconditional right to receive the contract consideration before the Company transfers the goods to the customer, the contractual liabilities shall be recognized according to the amount received or receivable when the customer actually issues the payment or the payment is due, whichever is earlier.

Contract assets and contractual liabilities under the same contract are listed on a net basis, and contract assets and contractual liabilities under different contracts are not offset.

33. Employee compensation

(1) Accounting treatment for short-term compensation

Short-term salary refers to the employee's salary that the Company needs to pay in full within 12 months after the end of the annual report period when employees provide relevant services, except post-employment benefits and dismissal benefits. During the accounting period when employees provide services, the Company recognizes the actual short-term salary as a liability, and includes it into relevant asset costs and expenses according to the beneficiaries of employees' services.

(2) Accounting treatment for post-employment benefit

Post-employment benefits refer to various forms of remuneration and benefits provided by the Company after employees retire or terminate labor relations with the Company in order to obtain services provided by employees, except short-term remuneration and dismissal benefits. Post-employment benefit plans include defined contribution plan and defined benefit plans. Defined contribution plan refers to the post-employment benefit plan in which the Company will not undertake further payment obligations after paying a fixed fee for an independent fund; Defined benefit plan refers to the post-employment benefit plan except the defined contribution plan.

(1) Defined contribution plan

Defined contribution plan includes basic old-age insurance and unemployment insurance. During the accounting period when employees provide services for the Company, the amount payable shall be calculated according to the local payment base and proportion, recognized as liabilities, and included in the current profits and losses or related asset costs.

During the accounting period when employees provide services, the amount payable calculated according to the defined contribution plan is recognized as a liability and included in the current profits and losses or related asset costs.

(2) Defined benefit plan

According to the formula determined by the expected cumulative benefit unit method, the Company attributes the benefit obligations generated by defined benefit plan to the period when employees provided services, and includes them in the current profits and losses or related asset costs. The employee compensation cost caused by defined benefit plan of the Company includes the following components:

A. Service costs, including current service costs, past service costs and settlement gains or losses. Current service costs refer to the increase in the present value of defined benefit plan obligations caused by employees' provision of services in the current period; Past service costs refer to the increase or decrease of the present value of defined benefit plan obligations related to employee service in the previous period caused by the revision of the defined benefit plan.

B. Net interest of net liabilities or net assets in defined benefit plan, including the interest income of planned assets, the interest expense of defined benefit plan obligations and the interest affected by the asset ceiling.

C. Changes arising from re-measurement of net liabilities or net assets in defined benefit plan.

Unless other accounting standards require or allow employee benefit costs to be included in the asset costs, the Company will include the above items A and B in the current profits and losses, and include Item C in other comprehensive income which will not be transferred back to profit or loss in subsequent accounting periods, but these amounts recognized in other comprehensive income can be transferred within the scope of equity.

(3) Accounting for retirement benefits

Dismissal benefits refer to the compensation provided to employees by the Company for terminating the labor relationship with employees before the expiration of their labor contracts or for encouraging employees to voluntarily accept layoffs. If the Company provides dismissal benefits to employees, the employee compensation liabilities arising from the dismissal benefits shall be recognized at the earlier of the following two dates, and included in the current profits and losses: when the Company cannot unilaterally withdraw the dismissal benefits provided by the plan to terminate labor relations or the proposal to cut back; When the Company recognizes the costs or expenses related to the reorganization involving the payment of dismissal benefits.

(4) Accounting for other long-term employee benefits

Other long-term employee benefits refer to all employee compensation except short-term salary, postemployment benefits and dismissal benefits, including long-term paid absences, long-term disability benefits and long-term profit sharing plans. Other long-term employee benefits provided by the Company to employees, if they meet the requirements of the defined contribution plan, shall be handled in accordance with the relevant provisions of the defined contribution plan; For other long-term employee benefits other than the above, the net liabilities or net assets of other long-term employee benefits shall be recognized and measured according to the relevant regulations of the defined benefit plan. At the end of the reporting period, the Company attributed the benefit obligations arising from other long-term employee benefits to the period when employees provided services, and included them in the current profits and losses or related asset costs.

34. Accrual liability

If the Company's obligation related to contingencies meet the following conditions at the same time, it will be recognized as a liability: (1) This obligation is the current obligation undertaken by the Company; (2) The performance of this obligation may lead to the outflow of economic benefits; (3) The amount of the obligation can be measured reliably.

All or part of the expenditures required for the estimated liabilities are expected to be compensated by the third party or other parties, and the compensation amount is recognized as an asset separately when it is basically determined that it can be received, and the recognized compensation amount does not exceed the book value of the recognized liabilities. The estimated liabilities are initially measured according to the best estimate of the expenditure required to perform the relevant current obligations, with the factors related to contingencies, such as risks, uncertainties and time value of money, comprehensively considered. If the time value of money has a significant impact, the best estimate shall be determined by discounting the relevant future cash outflows.

On the balance sheet date, the Company reviews the book value of the estimated liabilities. If there is conclusive evidence that the book value cannot truly reflect the current best estimate, such book value will be adjusted according to the current best estimate.

35. Share-based payment

1. Types of share-based payment

Share-based payment of the Company is divided into cash-settled share-based payment and equity-settled share-based payment.

Equity-settled share-based payment shall be measured at the fair value of equity instruments granted to employees. If it is exercisable immediately after the grant, it will be included in the relevant costs or expenses according to the fair value of the equity instrument on the grant date, and the capital reserve will be increased accordingly. If it is exercisable only after the service within the waiting period is completed or the specified performance conditions are met, on each balance sheet date within the waiting period, the service obtained in the current period shall be included in the relevant costs or expenses and capital reserve based on the best estimate of the number of exercisable equity instruments and according to the fair value on the grant date of the equity instruments. After the vesting date, the recognized related costs or expenses and the total owners' equity will not be adjusted.

Cash-settled share-based payment shall be measured at fair value of liabilities calculated and determined based on shares or other equity instruments undertaken by the Company. If it is exercisable immediately after the grant, it will be included in the relevant costs or expenses at the fair value of the liabilities undertaken by the Company on the grant date, and the liabilities will be increased accordingly. For cash-settled share-based payment exercisable after the service in the waiting period is completed or the specified performance conditions are met, the service obtained in the current period shall be included in the costs or expenses and corresponding liabilities on each balance sheet date during the waiting period based on the best estimate of the vesting situation and according to the fair value of the liabilities undertaken by the Company. On each balance sheet date and settlement date before the settlement of related liabilities, the fair value of liabilities is re-measured, and its changes are included in the current profits and losses.

2. Accounting treatment related to implementation, modification and termination of share-based payment plan

No matter how the terms and conditions of the granted equity instruments are modified, or even the grant of the equity instruments is cancelled or the equity instruments are settled, the Company shall at least recognize that the corresponding services obtained are measured according to the fair value of the granted equity instruments on the grant date, unless the vesting conditions of the equity instruments (except market conditions) cannot be met.

If the Company cancels the granted equity instruments or settles the granted equity instruments within the waiting period (except those cancelled due to failure to meet the conditions of vesting conditions), the treatment is as follows:

- (1) The cancellation or settlement will be treated as accelerated vesting, and the amount that should have been recognized in the remaining waiting period will be recognized immediately.
- (2) All the money paid to employees at the time of cancellation or settlement shall be treated as the repurchase of equity, and the part paid for repurchase that is higher than the fair value of the equity instrument on the repurchase date shall be included in the current expenses.
- (3) If a new equity instrument is granted to employees, and it is determined that the new equity instrument granted is used to replace the cancelled equity instrument on the grant date of the new equity instrument, the Company shall handle the granted alternative equity instrument in the same way as the modification of the terms and conditions of the original equity instrument.

36. Other financial instruments including preferred stock and perpetual bonds

37. Revenue

Disclosure of accounting policies adopted in income recognition and measurement according to business types

The Company has fulfilled its contractual obligations, that is, to recognize the income when the customer obtains the control right of relevant goods. Performance obligation refers to the commitment to transfer clearly distinguishable goods to customers in the contract. The Company evaluates the contract on the contract start date to identify each individual performance obligation contained in the contract. If the following conditions are met at the same time, it is clearly distinguishable goods:

- (1) Customers can benefit from the goods itself or from the use of the goods along with other easily available resources;
- (2) The commitment to transfer the goods to customers can be distinguished separately from other commitments in the contract.

The following situations usually indicate that the commitment to transfer the goods to customers cannot be distinguished separately from other commitments in the contract:

- (1) Significant services need to be provided to integrate the goods and other goods promised in the contract into the combined output agreed in the contract and transfer it to customers;
 - (2) The goods will make major modifications or customizations to other goods promised in the contract;
 - (3) The goods are highly correlated with other goods promised in the contract.

The transaction price is the amount of consideration that the Company is expected to receive for transferring the goods to customers, excluding the payment collected on behalf of third parties and the payment that the Company is expected to return to customers. When determining the transaction price of the contract, if there is a variable consideration, the Company will determine the best estimate of the variable consideration according to the expected value or the most likely amount, and include it in the transaction price at an amount not exceeding the amount that is unlikely to be significantly reversed when the relevant uncertainty is

eliminated. If there is a significant financing component in the contract, the Company will determine the transaction price according to the amount payable in cash when the customer obtains the goods control right, and the difference between the transaction price and the contract consideration will be amortized by the effective interest rate method during the contract period. If the interval between the customer obtaining the goods control right and the customer paying the price is less than one year, the Company will not consider the financing component. When the consideration that the Company has the right to collect from the customer due to the transfer of goods is in the form of non-cash, the Company will determine the transaction price according to the fair value of the non-cash consideration on the contract start date. If the fair value of the non-cash consideration cannot be reasonably estimated, the Company will indirectly determine the transaction price with reference to the individual selling price of the goods it promised to transfer to customers. For the payment that the Company expects to return to customers, except for obtaining other clearly distinguishable goods from customers, the consideration payable shall be used to offset the transaction price. If the consideration payable to customers exceeds the fair value of clearly distinguishable goods obtained from customers, the excess amount shall be used as the consideration payable to customers to offset the transaction price. If the fair value of clearly distinguishable goods obtained from customers cannot be reasonably estimated, the Company will fully offset the transaction price from the consideration payable to customers. When carrying out accounting treatment on the transaction price offset by the consideration payable to customers, the Company will offset the current income at the later time of recognizing the relevant income and paying (or promising to pay) the customer consideration.

If the contract contains two or more performance obligations, the Company will allocate the transaction price to each individual performance obligation according to the relative proportion of the individual selling price of the goods promised by each individual performance obligation on the contract start date, and measure the income according to the transaction price allocated to each individual performance obligation. In case of subsequent changes in the transaction price, the Company will allocate the subsequent changes to the performance obligations in the contract according to the basis adopted on the contract start date. The transaction price will not be re-allocated due to the change of individual selling price after the contract start date.

If any of the following conditions is met, the Company will perform its obligations within a certain period of time; Otherwise, it is a fulfillment of performance obligation at a certain time point:

- (1) Customers gain and consume the economic benefits brought by the Company's performance at the same time:
 - (2) Customers can control the goods under construction during the performance of the Company;
- (3) The goods produced during the performance of the Company have irreplaceable uses, and the Company has the right to collect payment for the accumulated part of the performance completed so far during the whole contract period.

For the performance obligations performed in a certain period of time, the Company shall recognize the income according to the performance progress during that period, except that the performance progress cannot be reasonably determined. The Company determines the performance progress of provided services according to the input method. When the performance progress cannot be reasonably recognized, if the cost already incurred by the Company is expected to be compensated, the revenue will be recognized according to the cost amount already incurred until the performance progress can be reasonably recognized.

For the performance obligations fulfilled at a certain time point, the Company recognizes the income when the customer obtains the control right of relevant goods. When judging whether the customer has obtained the control of the goods, the Company will consider the following signs:

- (1) The Company is entitled to the right of real time payment collection for the goods, that is, the customer has the real time payment collection obligation for the goods;
- (2) The Company has transferred the legal ownership of the goods to the customer, that is, the customer has the legal ownership of the goods;
- (3) The Company has transferred the goods in kind to the customer, that is, the customer has occupied the goods in kind;
- (4) The Company has transferred the main risks and rewards on the ownership of the goods to the customer, that is, the customer has obtained the main risks and rewards on the ownership of the goods;
 - (5) The customer has accepted the goods.

According to whether the Company has control over the goods or services before transferring them to customers, the Company judges whether it is the main responsible person or the agent when engaging in transactions. If the Company can control the goods or services before transferring them to customers, the Company is the main responsible person, and the income is recognized according to the total consideration received or receivable; Otherwise, the Company is an agent, and will recognize the income according to the expected amount of commission or handling fee, which is determined according to the net amount of the total consideration received or receivable after deducting the price payable to other interested parties, or according to the established commission amount or proportion.

The situations in which the Company can control the goods before transferring them to customers include the following:

- (1) The enterprise transfers the control right of goods or other assets to the customer after it obtains it from a third party;
 - (2) The enterprise can lead the third party to provide services to customers on behalf of the enterprise;
- (3) After the enterprise obtains the control right of the goods from the third party, it integrates the goods with other goods into a combined output and transfers it to the customer by providing significant services.

When judging whether it has control over the goods before transferring them to customers, the Company comprehensively considers all relevant facts and circumstances, including:

- (1) The enterprise bears the main responsibility for transferring goods to customers;
- (2) The enterprise bears the inventory risk of the goods before or after their transfer;
- (3) The enterprise has the right to decide the prices of the goods for trade independently;
- (4) Other relevant facts and circumstances.

Different income recognition methods and measurement methods involved in different business models adopted by similar businesses

The Company's commodity sales mainly include circulation sales, shopping mall joint operation and proprietary e-commerce, and the recognition methods of sales revenuethese three ways are as follows:

- (1) Circulation sales refers to that the Company recognizes the sales revenue when the goods are delivered to the customer and the authorized representative or the first carrier recognized by the customer at the designated place, and the customer and the authorized representative or the first carrier have signed for it, and the Company has received the payment or obtained delivery documents.
- (2) The shopping mall joint operation is the Company cooperates with the shopping mall to carry out joint sales in the form of counters in the shopping mall, and according to the agreement signed with the shopping mall, the shopping mall collects the payment when the Company's counters sell goods to customers, and the Company and the shopping mall carry out sales settlement. The shopping mall pays the Company after reconciling with the Company at the agreed settlement time (generally the next month) and deducting the income and related

expenses enjoyed by the shopping mall. The Company recognizes the sales revenue after deducting the deduction profit belonging to the shopping mall according to the full amount of the completed transaction of actual sales in the month.

(3) Proprietary e-commerce refers to that the Company retails through third-party e-commerce platforms (such as Tmall and JD.COM), and recognizes the sales revenue when the customer signs for the goods and obtains the payment or payment right.

38.Contract cost

Contract costs include incremental costs incurred in obtaining contract and contract performance costs.

The incremental costs incurred to obtain the contract refer to the costs that the Company would not have incurred if the contract had not been obtained (e.g., sales commission, etc.). If the cost is expected to be recovered, the Company recognizes it as an asset for the costs of acquiring the contract. Expenses incurred by the Company in obtaining the contract, other than the incremental costs that are expected to be recovered, are included in profit or loss for the current period when incurred.

If the costs incurred for the performance of the contract are not subject to the scope of the relevant standards such as inventory, fixed assets or intangible assets, and the following conditions are met at the same time, the Company recognizes them as an asset for contract performance costs:

- (1) the cost is directly related to a current or an anticipated contract, including direct labor, direct materials, manufacturing expenses (or similar expenses), costs expressly borne by the customer and other costs incurred solely as a result of the contract;
- (2) the cost increases the resources that the enterprise will use to fulfill its performance obligations in the future;
 - (3) the cost is expected to be recovered.

The asset as recognized by the cost of acquiring the contract and the asset as recognized by the cost of performance of the contract are amortized on the same basis as the revenue recognition of the goods or services related to the assets, and are included in profit or loss for the current period.

If the carrying amount of an asset related to the contract cost is higher than the following two differences, the Company shall make an impairment provision for the excess and recognize it as an asset impairment loss:

- (1) The residual consideration that the enterprise is expected to receive as a result of the transfer of commodities related to the asset:
 - (2) An estimate of the costs to be incurred for the transfer of the relevant goods.

If the factors of impairment in the previous period change subsequently, so that the difference by (1) minus (2) is higher than the carrying amount of the asset, the original provision for impairment of the asset shall be reversed and included in the profit or loss for the current period, but the carrying amount of the reversed asset shall not exceed the carrying amount of the asset on the reversal date assuming that no provision for impairment is made.

39. Government subsidies

1. Types of government subsidies

Government subsidies refer to the monetary assets or non-monetary assets obtained by the company from the government free of charge, including government subsidies related to assets and government subsidies related to income.

Asset-related government subsidies refer to government subsidies obtained by a company for the acquisition, construction or other formation of long-term assets.

Income-related government subsidies refer to government subsidies other than asset-related government subsidies.

2. The principle and timing of recognition of government subsidies

Recognition principle of government subsidies:

- (1) The company is able to meet the conditions attached by the government subsidy;
- (2) The company is able to receive government subsidies.

The government subsidy can only be recognized if the above conditions are met at the same time.

- 3. Measurement of government subsidies
- (1) If the government subsidy is a monetary asset, the company shall measure it according to the amount received or receivable;
- (2) If the government subsidy is a non-monetary asset, the company shall measure it at fair value, and if the fair value cannot be reliably obtained, it shall be measured at the notional amount (the notional amount is RMB 1).
 - 4. Accounting treatment of government subsidies
- (1) Asset-related government subsidies are written off the carrying amount of the underlying assets or recognized as deferred income upon acquisition. If it is recognized as deferred income, it shall be included in profit or loss in installments in accordance with a reasonable and systematic method during the useful life of the relevant asset. Government subsidies measured in notional amounts are directly included in profit or loss for the current period.
 - (2) Government subsidies related to income shall be handled as follows:

A. If it is used to compensate the company for the relevant costs, expenses or losses in subsequent periods, it shall be recognized as deferred income at the time of acquisition, and shall be included in the profit or loss for the current period or offset the relevant costs during the period when the relevant costs, expenses or losses are recognized.

- B. If it is used to compensate for the relevant costs, expenses or losses incurred by the company, it shall be directly included in the current profit or loss or offset the relevant costs when acquired.
- (3) For government subsidies that are included in both the asset-related part and the income-related part, if they can be distinguished, they shall be accounted for separately in different parts, and if it is difficult to distinguish, they shall be classified as income-related government subsidies as a whole.
- (4) Government subsidies related to the company's routine operations shall be included in other income or offset related costs and expenses according to the economic business substance. Government subsidies unrelated to the company's routine activities are included in non-operating income and expenditure. If the finance department directly allocates the discount funds to the company, the company will offset the relevant borrowing costs with the corresponding discount.
- (5) If the confirmed government subsidy needs to be returned, it shall be handled according to the following circumstances:
- A. If the carrying amount of the relevant asset is reduced at the time of initial recognition, the carrying amount of the asset shall be adjusted.
- B. If there is relevant deferred income, the carrying amount of the relevant deferred income shall be written off, and the excess part shall be included in the profit or loss for the current period.
 - C. If it belongs to other circumstances, it shall be directly included in the profit or loss for the current period.

40. Deferred tax assets/deferred tax liabilities

When the company acquires assets and liabilities, it determines its tax base. If there is a temporary difference between the carrying amount of assets and liabilities and their tax base, the deferred tax assets or deferred tax liabilities arising from them shall be recognized in accordance with the regulations.

1. Recognition of deferred tax assets

- (1) The company recognizes deferred tax assets arising from deductible temporary differences to the extent that it is likely to obtain taxable income that can be used to offset deductible temporary differences. However, deferred tax assets arising from the initial recognition of assets or liabilities are not recognized in transactions that (1) is not a business combination, and (2) the transaction does not affect either accounting profits or taxable income (or deductible losses) at the time of the transaction.
- (2) The Company recognizes the corresponding deferred tax assets for deductible temporary differences related to investments in subsidiaries, associates and joint ventures that meet the following conditions at the same time: (1) the temporary differences are likely to be reversed in the foreseeable future, and (2) the taxable income used to offset the deductible temporary differences is likely to be obtained in the future.
- (3) For deductible losses and tax credits that can be carried forward to subsequent years in accordance with the provisions of the tax law, they shall be treated as deductible temporary differences, and the corresponding deferred tax assets shall be recognized to the extent that the future taxable income that is likely to be used to offset the deductible losses and tax credits.

2. Recognition of deferred tax liabilities

- (1) The company recognizes all deferred tax liabilities arising from taxable temporary differences, except for the deferred income tax liabilities arising from the following transactions: (1) the initial recognition of goodwill, and (2) the initial recognition of assets or liabilities arising from transactions that satisfy both the following characteristics: the transaction is not a business combination, and the transaction does not affect either the accounting profit or the taxable income (or deductible loss) at the time of the transaction.
- (2) The Company recognizes the corresponding deferred tax liabilities for taxable temporary differences related to investments in subsidiaries, associates and joint ventures, but other than those with the following conditions are met at the same time: (1) the investment enterprise can control the time for the reversal of the temporary difference, and (2) the temporary difference is likely not to be reversed in the foreseeable future.

3. Presentation of net offsets of deferred tax assets and deferred tax liabilities

When the company has the legal right to settle on a net basis and intends to settle on a net basis or acquire assets and settle liabilities at the same time, the company's current income tax assets and current income tax liabilities are presented on a net basis after offset.

When there is a legal right to settle the current income tax assets and current income tax liabilities on a net basis, and the deferred tax assets and deferred tax liabilities are related to the income tax levied by the same tax collection and administration department on the same taxpayer or levied by the same tax collection and administration department to different tax subjects, but in each period of reversal of deferred tax assets and liabilities of material nature in the future, the taxpayer involved intends to settle the current income tax assets and liabilities on a net basis or acquire the assets and settle liabilities at the same time, the deferred tax assets and deferred tax liabilities of the Company are presented on a net basis after offset.

41. Leasing

(1) Accounting treatment as a lessee lease

(1) Right-of-use assets

On the commencement date of the lease term, the Company, as the lessee, recognizes the right to use the leased asset during the lease term as right-of-use asset, except for short-term leases and leases of low-value assets.

Right-of-use assets are initially measured at cost, which includes:

- A. Initial measurement amount of the lease liability;
- B. If there is a lease incentive for the lease payment paid on or before the start date of the lease term, the relevant amount of the lease incentive already enjoyed shall be deducted;
 - C. Initial direct costs incurred;
- D. Costs expected to be incurred to dismantle and remove the leased asset, restore the site on which the leased asset is located, or restore the leased asset to the condition agreed in the lease terms, except for the production of inventory.

The Company adopts the cost model for the subsequent measurement of right-of-use assets, and adopts the straight-line method for depreciation of various types of right-of-use assets.

If the Company is able to reasonably determine that the ownership of the leased assets will be acquired at the expiration of the lease term, the depreciation shall be accrued during the remaining useful life of the leased assets, and if it cannot be reasonably determined that the ownership of the leased assets can be acquired at the expiration of the lease term, the depreciation shall be accrued during the period which is shorter from the lease term and the remaining useful life of the leased assets. If the right-of-use asset is impaired, the Company will carry out subsequent depreciation based on the carrying amount of the right-of-use asset after deducting the impairment loss.

When the Company remeasures lease liabilities based on the present value of the changed lease payments and adjusts the carrying amount of right-of-use assets accordingly, if the carrying amount of right-of-use assets has been reduced to zero, but the lease liabilities still need to be further reduced, the remaining amount will be included in profit or loss for the current period.

The impairment test method and impairment provision method of right-of-use assets are detailed in (XXVII) Impairment of long-term assets of this accounting policy.

(2) Lease liabilities

At the commencement date of the lease term, the Company recognizes the present value of unpaid lease payments as lease liabilities, excluding short-term leases and leases of low-value assets.

When calculating the present value of the lease payment, the Company, as the lessee, uses the interest rate implicit in the lease as the discount rate, and if the interest rate implicit in the lease cannot be determined, the incremental borrowing rate of the Company is used as the discount rate.

The Company calculates the interest expense of lease liabilities for each period of the lease term at a fixed periodic interest rate and includes them in profit or loss for the current period. Variable lease payments that are not included in the measurement of lease liabilities are recognized in profit or loss for the current period when they are actually incurred.

After the commencement date of the lease term, the Company will remeasure the lease liability based on the present value of the changed lease payment in the event of a change in the amount of the substantial fixed payment, a change in the estimated amount payable for the residual value of the guarantee, a change in the index or ratio used to determine the amount of the lease payment, a change in the evaluation result or actual exercise of the option to purchase, renew or terminate the option.

(3) Short-term leases and leases of low-value assets

A short-term lease is a lease with a lease period of not more than 12 months on the start date of the lease term and does not include an option to purchase. A lease of a low-value asset refers to a lease with a low value when a single leased asset is a brand-new asset. If the Company subleases or expects to sublease the leased assets, the original lease is not a low-value asset lease.

The Company chooses not to recognize right-of-use assets and lease liabilities for short-term leases and leases of low-value assets, and to include the relevant lease payments in profit or loss or the cost of related assets on a straight-line basis for each period of the lease term.

(2) Accounting treatment as a lessor's lease

On the lease commencement date, the Company divides the lease into the finance lease and the operating lease. A financial lease refers to a lease that substantially transfers almost all of the risks and rewards associated with the ownership of the leased asset, regardless of whether the ownership is ultimately transferred. Operating leases refer to leases other than financial leases. When the Company acts as a subleaselessor, it classifies the sublease based on the right-of-use assets generated from the original lease.

(1) Accounting treatment of operating leases

Lease receipts from operating leases are recognized as rental income on a straight-line basis for each period of the lease term. The Company capitalizes the initial direct expenses incurred in connection with the operating lease and apportion them to profit or loss for the current period on the same basis as the rental income recognition during the lease term. Variable lease payments that are not included in lease receipts are recognized in profit or loss for the current period when they are actually incurred.

(2) Accounting treatment of financial leases

On the lease commencement date, the Company recognizes the financial lease receivables for the financial lease and terminates the recognition of the financial lease assets. When the Company initially measures the financial lease receivables, the net lease investment is recorded as the entry value of the financial lease receivables. The net lease investment is the sum of the unsecured residual value and the present value of lease receipts not yet received at the start date of the lease term discounted at the interest rate implicit in the lease.

The Company calculates and recognizes interest income for each period of the lease term at a fixed periodic interest rate. The derecognition and impairment of financial lease receivables are described in (XI) Financial instruments of this accounting policy.

Variable lease payments that are not included in the net measurement of lease investments are recognized in profit or loss for the period when they are actually incurred.

IX. Changes of consolidation scope

1. Enterprise combined under different control

(1) Enterprise combined under different control in the Period

Acquiree	Time point for equity obtained	Cost of equity obtained	Ratio of equity obtained	Acquired way Equity obtained way	Purchasing date	Standard to determine the purchasing date	Income of acquiree from purchasing date to	Net profit of acquiree from purchasing date to
----------	--------------------------------------	-------------------------	--------------------------	---	-----------------	---	--	--

		period-end	period-end

(2) Combination cost and goodwill

Unit: RMB/CNY

Consolidation cost	
Cash	
Fair value of non-cash assets	
Fair value of debts issued or assumed	
Fair value of equity securities issued	
Fair value of contingent consideration	
Fair value of the equity prior to the purchasing date	
Other	
Total combination cost	
Less: shares of fair value of identifiable net assets acquired	
The amount by which the goodwill/cost of consolidation is less than the share of fair value of identifiable net assets acquired	

Determination method for fair value of the combination cost:

Contingent consideration and changes:

Main reasons for large goodwill resulted:

Other note:

(3) Identifiable assets and liability on purchasing date under the acquiree

Unit: RMB/CNY

	Fair value on purchasing date	Book value on purchasing date
Assets:		
Monetary fund		
Account receivable		
Inventory		
Fixed assets		
Intangible assets		
Liability:		
Loan		
Account payable		
Deferred income tax liabilities		
Net assets		
Less: Minority interests		
Net assets acquired		

Determination method for fair value of the identifiable assets and liabilities:

Contingent liability of the acquiree bear during combination:

Other note:

(4)	<i>a</i> • 1	• • •		e • 1	P 41	. 1 111 6	1 • 1 4

Whether it is a business combination realized by two or more transactions of exchange and a transaction of obtained control rights in the Period or not

□Yes☑No

- (5) On purchasing date or period-end of the combination, combination consideration or fair value of identifiable assets and liability for the acquiree are un-able to confirm rationally
- (6) Other Note:
- 2. Enterprise combine under the same control
- (1) Enterprise combined under the same control in the Period

Unit: RMB/CNY

Combined party	Equity ratio obtained in combinatio	Basis of combined under the same control	Combinatio n date	Standard to determine the combinatio n date	Income of the combined party from periodbegin of combination to the combination date	Net profit of the combined party from period- begin of combinatio n to the combinatio n date	Income of the combined party during the comparison period	Net profit of the combined party during the comparison period
----------------	-------------------------------------	--	----------------------	---	--	--	---	---

Other note:

(2) Combination cost

Unit: RMB/CNY

Consolidation cost	
Cash	
Book value of non-cash assets	
- Book value of debts issued or assumed	
The face value of the equity securities issued	
Contingent consideration	

Explanation on contingent consideration and its changes:

Other note:

(3) Book value of the assets and liability of the combined party on combination date

	Consolidation date	End of last period
Assets:		
Monetary fund		
Account receivable		
Inventory		

Fixed assets	
Intangible assets	
Liability:	
Loan	
Account payable	
Net assets	
Less: Minority interests	
Net assets acquired	

Contingent liability of the combined party bear during combination:

Other note:

3. Counter purchase

Basic transaction information, basis of counter purchase, whether making up business due to the assets and liability reserved by listed company and basis, determination of combination cost, amount and calculation on adjusted equity by equity transaction:

4. Subsidiary disposal

Whether lost controlling rights while dispose subsidiary on one time or not

□Yes ☑No

Whether lost controlling rights in the Period while dispose subsidiary on two or more steps or not

□Yes⊠No

5. Other reasons for consolidation range changed

Reasons for changed on consolidation range (such as new subsidiary established, subsidiary liquidated etc.)And relevant information:

In the current period, four new wholly-owned subsidiaries are established, including Dongguan Xinsen Jewelry .-with a registered capital of 5 million yuan, Shenzhen Yunyouxuan Jewelry Co., Ltd..-with a registered capital of 15 million yuan, Hangzhou Huabao Digital Culture Co Ltd.-with a registered capital of 5 million yuan, Tibet Jinyaya Trading Co., Ltd. .-with a registered capital of 2 million yuan, and Shenzhen China International.-with a registered capital of HKD 10,000 yuan.

6.Other

- X. Equity in other entity

Other note

Shenzhen China Bicycle purchased the shares of minority stockholders of Shenzhen Xinsen Jewelry Gold Co., Ltd., a subsidiary company. After the purchase, Xinsen became a wholly-owned subsidiary of Shenzhen China Bicycle, and the completion date was in early August 2023. According to the Listing Rules for Stocks of Shenzhen Stock Exchange, based on prudent considerations, the company determined that Fuzhou Zuanjinsen and Fuzhou Rongrun were related parties of the company within 12 months after the industrial and commercial registration for the purchase of the shares of minority shareholders of the holding subsidiary, and the related transactions occurred were related-party transactions.

7. Commitments of related party

According to the Cooperation Agreement signed by Shenzhen China Bicycle Company (Holdings) Co., Ltd. with Wansheng Industrial Holdings (Shenzhen) Co., Ltd. (hereinafter referred to as "Wansheng Industrial") and Shenzhen Guosheng Energy Investment and Development Co., Ltd. (hereinafter referred to as "Guosheng Energy") on December 14, 2020, Wansheng Industrial promised that in the next three years from the next year after the completion of the non-public issuance of shares and the completion of the adjustment of the board of

directors and board of supervisors of the listed company by Wansheng Industrial, the net profit of the listed company shall not be less than RMB 30 million yuan, 35 million yuan and 40 million yuan, that is, the cumulative net profit scale is 105 million yuan. If the cumulative actual net profit of the listed company as of any year during the performance commitment period does not reach the promised cumulative net profit, Wansheng Industrial shall compensate the listed company in cash within 10 working days after the issuance of the audit report of the listed company in the year during the performance commitment period. The amount of compensation payable for the year is calculated as follows: amount of compensation payable for the year = cumulative committed net profit as of the end of the period minus cumulative realized net profit as of the end of the period minus cumulative compensation amount (if any).

According to the unqualified audit report with the report number of GXS Zi [2024] No.23014760012 issued by Huaxing Certified Public Accountants LLP (special general partnership) on April 19, 2024, in 2023, the net profit attributable to the owners of the parent company in Shenzhen China Bicycle was RMB 17,901,948.24, and the actual completion was lower than the performance commitment by RMB 30,000,000, and the completion rate of performance commitment was 59.67%, which failed to meet the performance commitment target. According to the performance commitment, Wansheng Industrial shall pay the company RMB 12,098,051.76 in cash for the 2023 annual performance compensation within ten working days after the issuance of the 2023 annual audit report of Shenzhen China Bicycle. On April 29, 2024, the company received performance compensation of RMB 12,098,051.76 from Wansheng Industrial, and Wansheng Industrial fulfilled its performance compensation obligations in 2023 in accordance with the Cooperation Agreement. The performance commitment for 2024 -2025 is being fulfilled.

6. Segment

(1) Recognition basis and accounting policy for reportable segment

The Company determines its business segments based on its internal organizational structure, management requirements, and internal reporting system. The Company's business segments are those that meet the following conditions at the same time:

- (1) The component is capable of generating income and incurring expenses in its daily activities;
- (2) Management is able to regularly evaluate the operating results of the component in order to decide on the allocation of resources to it and evaluate its performance;
- (3) Able to obtain accounting information related to the financial position, results of operations and cash flows of the component.

The Company determines the reporting segment on the basis of the industry segment.

Segment reporting information is disclosed in accordance with the accounting policy and measurement standards adopted by each segment in reporting to management, which are consistent with those at the time of preparation of the financial report.

(2) Financial information for reportable segment
