2024

ANNUAL CEO LETTER TO STOCKHOLDERS

TOM PALMER
President and
Chief Executive Officer

Dear Stockholders,

As we reflect on another milestone year at Newmont, I am proud to introduce our annual report – a comprehensive view into our transformational journey in 2024.

Since we closed one of the largest acquisitions in mining history, we have undergone a period of significant integration, bringing together new assets and exceptional teams, rationalization of our new portfolio and stabilization toward a business focused on large, long-life mining operations.

Our foremost priority remains the safety and wellbeing of our workforce. We have focused our efforts on enhancing our systems, fostering a deep safety culture and investing in continuous skill development – ensuring that every team member returns home safely. As you will read, this dedication is the cornerstone of everything we do.

With a Tier 1 portfolio of long-life assets, a disciplined approach to capturing safety and efficiency improvements, and extensive organic growth to be unlocked in years to come, we're excited about the long-term upside as we execute on our plans to build the world's leading gold and copper portfolio. Our record fourth quarter free cash flow and strong annual performance reflect our ability to create long-term value while maintaining financial discipline. While there is still work ahead to reduce costs and maximize our exposure to unprecedented gold prices, the progress we made in 2024 provides a strong foundation for continued success.

Our priority for the year ahead is to operate safely, reduce costs, improve productivity and generate strong returns for our stockholders. By staying true to our values, we will realize the long-term potential of this portfolio of assets the likes of which has never been seen before in the gold industry.

ALWAYS SAFE

Safety is at the heart of everything we do. After being five years fatality-free, we suffered the tragic loss of five colleagues over a 12-month period. That is unacceptable, and we are working diligently to review and refresh key safety programs across our global business. We are committed to ensuring that Newmont is a workplace where every employee and contractor returns home safely every day.

To drive meaningful progress, we continue to enhance our safety programs by focusing on three critical areas: systems, culture and skill development.

- **Strengthening our systems:** We are refining our safety systems to make them more effective. This includes streamlining key processes such as our fatigue risk management standards and critical control verification processes to improve consistency and compliance.
- **Fostering a strong safety culture:** A culture of safety is built on trust, accountability and leadership at all levels. We are embedding safety into every aspect of our operations, ensuring that each team member takes ownership of their wellbeing and that of their colleagues.

- **Investing in skill development:** Equipping our workforce with the right knowledge, tools and training is essential to maintaining a safe working environment. We continue to enhance safety education and competency programs across all our sites.

As the newly appointed Chair of the International Council on Mining and Metals (ICMM), I am committed to keeping safety performance at the forefront of our industry's focus. By fostering collaboration, sharing of best practices and championing initiatives that raise industry-wide safety standards, we can create a safer future for all.

GO-FORWARD PORTFOLIO

Over the last five years, Newmont has built a world-class portfolio with 11 long-life operations and three projects in execution. This unique portfolio is positioned to produce 6 million ounces of gold and 150,000 tonnes of copper on average annually over the next decade.

This strategic portfolio serves as the foundation of a resilient and sustainable business – designed to adapt to shifting global demands. Many of our operations have mine lives exceeding 15 years, supporting profitable gold and copper production into the 2050s and beyond. With the gold industry's largest reserve base of 134.1 million attributable gold ounces and significant exposure to copper with 13.5 million tonnes of copper reserves, we have a strong foundation, providing unmatched stability and growth potential.*

The strategic acquisition of Newcrest strengthened our portfolio, unlocking significant synergies and increasing our exposure to copper. Through systems integration, streamlined operations and efficiency initiatives, we aim to maximize the value of our combined assets over the next two years.

OPERATIONAL EXCELLENCE AND MAXIMIZING PERFORMANCE

2024 was a transformative year for Newmont, with a focus on integrating new assets into the portfolio marked by a strong step up in the fourth quarter performance. In the final quarter, we produced approximately 230,000 more ounces of gold than in the previous quarter and reduced unit costs by nearly 10 percent. This performance underscores the strength of our Tier 1 portfolio and highlights what is possible as we continue to optimize our assets.

To fully leverage our enhanced portfolio, and shape an organization that is fit for purpose, we have shifted to three business units – Africa and Canada (AFCAN), Latin America and the Caribbean (LATAC), and Asia Pacific (APAC) – each positioned to drive strategic growth while maintaining operational excellence.

For 2025, our performance will be driven by our six managed Tier 1 operations – Tanami, Boddington, Peñasquito, Cadia, Lihir and Ahafo. We are optimizing mine plans, investing in life-extension projects and

Tanami continues to advance the second expansion project, providing a meaningful reduction in operating costs and increasing gold production by approximately 35 percent beginning in 2028.

Panel Caves at Cadia are expected to deliver more than 5 million ounces of gold and 1 million tonnes of copper, positioning Cadia to continue operating to the middle of this century.

Ahafo North remains on track to pour first gold in the second half of 2025 and declare commercial production towards the end of 2025.

strengthening operational efficiencies to maximize value. Key projects include:

- **Ahafo North (2025 commissioning):** In 2024, we advanced infrastructure construction, progressed highway diversion and commenced stripping. This project will expand the Ahafo complex to annually produce approximately 750,000 ounces of gold.
- **Tanami Expansion (H2 2027 completion):** In 2024, we completed 1.3 kilometers of concrete lining in the production shaft. This project will reduce operating costs by 2028 while increasing gold production by approximately 35 percent.
- **Cadia development:** In 2024, we achieved cave establishment at PC2-3 and completed more than 12 kilometers of underground development at PC1-2. This project will unlock decades of gold and copper reserves.

Beyond these projects, Newmont boasts an unrivaled organic growth pipeline in both gold and copper. We continue to evaluate strategic expansion opportunities, ensuring they are pursued at the right time and in the most capital-efficient manner to generate long-term value for our stockholders.

PEOPLE AND LEADERSHIP: WORKING TOGETHER

With a strong foundation in place for Newmont's future, we have built a highly capable leadership team with the expertise to drive transformation, collaboration and long-term business success. To support this evolution, we launched *Working Together at Newmont* – a comprehensive framework of systems, tools and expectations designed to enhance collaboration, efficiency and productivity across the organization.

This initiative builds on our strengths, fostering a workplace where every team member feels valued, empowered and inspired to bring their best every day. By cultivating an inclusive culture where everyone belongs and thrives, we are driving deeper engagement and collective success.

As part of this transformation, we welcomed new leadership to further strengthen our capabilities. Peter Wexler joined us in March 2024 as the Chief Legal Officer to lead our global legal, compliance and regulatory affairs. Francois Hardy, a Newmont veteran of over 20 years, was promoted to Chief Technology Officer in May 2024, bringing deep institutional knowledge and expertise to shape our technical strategies for operational excellence and future growth.

“Looking to 2025 and beyond, our priorities are clear: maximize the potential of our Tier 1 portfolio, meet our commitments, return capital and drive long-term value for our stockholders.”

Photo: Cadia, Australia

While structural changes bring challenges, successful transformations require clear vision and strong leadership. Identifying the right leaders and aligning them with a focused strategy has been key to unlocking the full potential of our portfolio.

As we transition from 17 to 11 managed operations, we remain deeply committed to fostering a culture of safety, accountability and empowerment, ensuring our people have the tools, training and support to make confident, informed decisions. With our go-forward portfolio, we are well-positioned to harness the full potential of our team and seize the opportunities ahead.

SUSTAINABILITY: BUILDING A LASTING LEGACY

Sustainability is embedded in Newmont’s business strategy, guiding our commitment to responsible mining and long-term value creation. For the ninth consecutive year, Newmont was recognized as the sector leader on the Dow Jones Sustainability Index.

We are proud to be honored with prestigious global awards, including the U.S. Secretary of State’s Award for Corporate excellence awarded to our Suriname operations, recognizing our dedication to responsible practices. Additionally, Cadia, our Tier 1 gold/copper mine located in New South Wales, Australia, received The Copper Mark and The Molybdenum Mark, further underscoring our commitment to sustainability, transparency and ethical standards across our operations.

Through our partnership with MKS PAMP, a leading refiner of gold, we offered consumers an opportunity to purchase responsibly sourced gold at the largest U.S. wholesaler, reinforcing our commitment to ethical mining and demonstrating the capability we are building within our commercial arm.

Beyond responsible production, we continue to enhance our social impact by:

- **Strengthening community relationships** through active engagement and collaboration;
- **Increasing local procurement** to support regional economies and create shared value; and
- **Fostering inclusive economic growth** that benefits host communities and future generations.

With our go-forward portfolio in place, we are working on reshaping our sustainability strategy in 2025 to meet the needs of our assets, projects, communities, host governments, investors and other key stakeholders. As a leader in sustainable mining, we are committed to setting industry standards, driving responsible partnerships and championing ethical practices. Our goal is to leave a lasting legacy of responsible mining – one that not only delivers strong financial performance but also creates meaningful, long-term benefits for people, communities and the environment.

FINANCIAL STRENGTH AND STOCKHOLDER RETURNS

Newmont remains committed to a disciplined capital allocation strategy that balances financial resilience, long-term growth and stockholder value. Our approach is guided by three core priorities:

1. **Maintaining financial flexibility** to navigate commodity cycles and preserve an investment-grade balance sheet;
2. **Reinvesting in our business** to generate sustainable free cash flow and drive long-term value creation; and
3. **Returning capital to stockholders** through stable dividends and share buybacks.

To support these priorities, we are allocating \$1.8 billion annually in sustaining capital, ensuring the execution of critical projects such as Cadia's tailings work and other essential infrastructure investments. Additionally, development capital will remain at \$1.3 billion per year, directed toward high-value, strategic growth opportunities that enhance our Tier 1 portfolio.

This disciplined approach positions Newmont to deliver consistent returns, sustain long-term production and create lasting value for our stakeholders.

REALIZING OUR POTENTIAL

Over the past 18 months, through integration, rationalization and stabilization, we have strengthened our business and gained a deeper understanding of our portfolio. This clarity empowers us to make strategic, long-term decisions that drive sustainable value.

As we look ahead to 2025, we are focused on three key priorities: safety, cost efficiency and productivity. These are not just operational targets – they are core commitments to our employees, our host communities, the nations that enable us to operate and our stockholders.

With a world-class portfolio of long-life assets, we are strategically positioned to unlock industry-leading organic growth while maintaining financial discipline and operational excellence.

With over a century of experience, Newmont is stronger than ever, well-positioned for the future and committed to remaining a global leader for generations to come. On behalf of our workforce, executive team and Board of Directors, thank you for your continued support and confidence in Newmont.

Tom Palmer
President and Chief Executive Officer

** Cautionary Statement and Notes: This letter contains "forward-looking statements" which are intended to be covered by the safe harbor created by securities laws. Such statements include without limitation, estimates and expectations of mine life, future portfolio composition, performance and profitability, future production, value creation, operational safety, cost reductions, productivity improvements, project development and related timelines and metrics (including with respect to Ahafo North, Tanami Expansion and Cadia Development), balance sheet strength, financial flexibility, capital allocation, sustaining capital, development capital, return to stockholders, including dividends and share repurchases, and other outlook. Forward-looking statements are based on assumptions which remain subject to risks and uncertainties. See Forward-Looking Statements and Risk Factors in Item 1 and Item 1A of the Form 10-K for additional information. Investors are reminded not to place undue reliance on such estimates or forward-looking statements.*

A Tier 1 asset is defined as having, on average over such asset's mine life: (1) production of over 500,000 GEOs/year on a consolidated basis, (2) average all-in-sustaining cost ("AISC")/oz in the lower half of the industry cost curve, (3) an expected mine life of over 10 years, and (4) operations in countries that are classified in the A and B rating ranges for Moody's, S&P and Fitch. With respect to other assets in the industry, such terms and metrics are as published in public filings of the third-party entities reporting with respect to those assets. Newmont's methods of calculating operating metrics, such as AISC, and those of third parties may differ for similarly titled metrics published by other parties due to differences in methodology. See Item 7, MD&A, under the heading "Non-GAAP Financial Measures" for Newmont's definition of AISC. A Tier 1 classification is based on the reasonable good faith expectations of management as of the date hereof based on an assessment that considers past performance, as well as expectations over the remainder of the life of mine. As such, Tier 1 asset classifications are forward-looking statements with respect to the average over the life of mine. For example, an asset may not fit one element of such definition due to a change over a select period, but continue to be designated as a Tier 1 asset based on an aggregated assessment of the asset over the life of mine. Estimates or expectations of future production, AISC, mine life and country ratings are based upon certain assumptions, which may prove to be incorrect. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of Newmont's operations and projects being consistent with current expectations and mine plans; (iii) political developments being consistent with current expectations; (iv) certain price assumptions for gold, copper, silver, zinc, lead and oil; (v) prices for key supplies; (vi) the accuracy of current mineral reserve, mineral resource and mineralized material estimates; and (vii) other planning assumptions.

Investors are also cautioned that the share repurchase program may be discontinued at any time. The extent to which the Company repurchases its shares, and the timing of such repurchases, will depend upon a variety of factors, including trading volume, market conditions, legal requirements, business conditions and other factors. Consequently, the Board of Directors may revise or terminate such share repurchase authorization in the future. Investors are also reminded that future dividend payment levels and quarterly declarations remain subject to the discretion of the Board. See Item 1A – Risk Factors under the heading "Holders of our common stock may not receive dividends."

For more information on non-GAAP measures, including Free Cash Flow (and a reconciliation to the nearest GAAP metric), see Non-GAAP Financial Measures in Item 7 of this report. For more information regarding reserves and resources, see Item 2 of this report. Reserve and resource estimates referenced in this letter are as of December 31, 2024.

Average realized price:			
Gold (per ounce)	\$ 2,408	\$ 1,954	\$ 1,792
Copper (per pound)	\$ 4.00	\$ 3.71	\$ 3.69
Silver (per ounce)	\$ 24.13	\$ 19.97	\$ 18.45
Lead (per pound)	\$ 0.91	\$ 0.90	\$ 0.91
Zinc (per pound)	\$ 1.14	\$ 0.96	\$ 1.34
Consolidated costs applicable to sales: ⁽⁴⁾⁽⁵⁾			
Gold (per ounce)	\$ 1,126	\$ 1,050	\$ 933
Gold equivalent ounces - other metals (per ounce) ⁽³⁾	\$ 834	\$ 1,127	\$ 819
All-in sustaining costs: ⁽⁵⁾			
Gold (per ounce)	\$ 1,516	\$ 1,444	\$ 1,211
Gold equivalent ounces - other metals (per ounce) ⁽³⁾	\$ 1,161	\$ 1,579	\$ 1,114

⁽¹⁾ Attributable gold ounces produced includes 235, 224, and 285 ounces for the years ended December 31, 2024, 2023, and 2022, respectively, related to the Pueblo Viejo mine, which is 40% owned by Newmont and accounted for as an equity method investment, and 138 ounces for the year ended December 31, 2024, related to the Fruta del Norte mine, which is wholly owned by Lundin Gold whom the Company holds a 32.0% interest and is accounted for as an equity method investment on a quarter lag.

⁽²⁾ Attributable gold ounces sold excludes ounces related to the Pueblo Viejo mine and the Fruta del Norte mine.

⁽³⁾ Gold equivalent ounces are calculated as pounds or ounces produced or sold multiplied by the ratio of the other metals' price to the gold price. Refer to Results of Consolidated Operations within Part II, Item 7, MD&A for further information.

⁽⁴⁾ Excludes *Depreciation and amortization* and *Reclamation and remediation*.

⁽⁵⁾ Refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A.

Highlights (dollars in millions, except per share, per ounce and per pound amounts)

- **Net income:** Delivered *Net income (loss) from continuing operations attributable to Newmont stockholders* of \$3,280 or \$2.86 per diluted share, an increase of \$5,801 from the prior year partially due to an increase to attributable net income related to the acquired Newcrest sites. Excluding the impact of acquired sites, the increase is primarily due to higher average realized prices for all metals, lower *Impairment charges* and *Reclamation and remediation*, and higher net income at Peñasquito which had been impacted in 2023 as a result of the labor strike; partially offset by the *Loss on assets held for sale* and higher income and mining tax expense.
- **Adjusted net income:** Reported Adjusted net income of \$3,991 or \$3.48 per diluted share, an increase of \$1.91 per diluted share from the prior year (refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A).
- **Adjusted EBITDA:** Reported \$8,675 in Adjusted EBITDA, an increase of 106% from the prior year (refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A).
- **Cash Flow:** Reported *Net cash provided by (used in) operating activities of continuing operations* of \$6,318 for the year ended December 31, 2024, an increase of 129% from the prior year, and free cash flow of \$2,916 (refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A).
- **Portfolio improvements:** Completed the sale of the assets of the Telfer reportable segment, including Newmont's 70% interest in the Havieron development project and other related assets, for total consideration of \$453. Announced agreements to sell the Akyem, Musselwhite, Éléonore, CC&V, and Porcupine reportable segments, which are expected to close in the first half of 2025.
- **Attributable gold production:** Produced approximately 7 million ounces of gold, an increase of approximately 24% from prior year.
- **Financial strength:** Ended the year with \$3,619 of consolidated cash, cash of \$45 included in *Assets held for sale*, and approximately \$7,664 of liquidity; declared a total dividend of \$1.00 per share for the year.

Our global project pipeline

Newmont's project pipeline supports stable production with improving margins and mine life. Near-term development capital projects are presented below. Additional projects represent incremental improvements to production and cost guidance. We manage our wider project portfolio to maintain flexibility to address the development risks associated with our projects including permitting, local community and government support, engineering and procurement availability, technical issues, escalating costs and other associated risks that could adversely impact the timing and costs of certain opportunities.

Ahafo North, Ahafo. This project expands our existing footprint in Ghana located approximately 30 kilometers from the Company's Ahafo South operations and will deliver value through the open pit mining and processing of over three million ounces of gold over a 13-year mine life. The project is expected to add between 275,000 and 325,000 ounces per year for the first five full years of production beginning in 2026. Capital costs for the project are estimated to be between \$950 and \$1,050 with an expected commercial production date in late 2025. Development capital costs (excluding capitalized interest) since approval were \$616, of which \$241 related to 2024.

Tanami Expansion 2, Tanami. This project secures Tanami's future as a long-life, low-cost producer with potential to extend mine life to 2040 through the addition of a 1,460-meter hoisting shaft and supporting infrastructure to achieve higher production and provide a platform for future growth. The expansion is expected to increase average annual gold production by approximately 150,000 to 200,000 ounces per year for the first five years and is expected to significantly reduce operating costs by approximately 30 percent. Capital costs for the project are estimated to be between \$1,700 and \$1,800 with an expected commercial production date in the second half of 2027. Development capital costs (excluding capitalized interest) since approval were \$1,020, of which \$268 related to 2024.

Cadia Panel Caves, Cadia. This project includes two panel caves to recover approximately 5.9 million ounces of gold reserves and 2.9 billion pounds of copper reserves. First ore has been delivered from the first panel cave (PC2-3), and development is underway at the second panel cave (PC1-2). Capital costs for the PC2-3 project are estimated to be between \$1,000 and \$1,200, which includes more than \$900 spent by Newcrest prior to the acquisition by Newmont in November 2023. Development capital costs are expected to continue until the second half of 2026. Development capital costs (excluding capitalized interest) for PC2-3, PC1-2, and PC1 combined since acquisition of Newcrest were \$248, of which \$212 related to 2024.

PART I

ITEM 1. BUSINESS (dollars in millions, except per share, per ounce and per pound amounts)

Introduction

Newmont Corporation was incorporated in 1921 and is primarily a gold producer with significant operations and/or assets in the United States, Canada, Mexico, Dominican Republic, Peru, Suriname, Argentina, Chile, Australia, Papua New Guinea, Ecuador, Fiji and Ghana. At December 31, 2024, Newmont had attributable proven and probable gold reserves of 134.1 million ounces, attributable measured and indicated gold resources of 99.4 million ounces, attributable inferred gold resources of 70.6 million ounces, and an aggregate land position of approximately 25,500 square miles (66,000 square kilometers). Newmont is also engaged in the production of copper, silver, lead, and zinc. As the world's leading gold company, Newmont remains committed to creating value and improving lives through sustainable and responsible mining.

Newmont's corporate headquarters are in Denver, Colorado, U.S. In this report, "Newmont," the "Company," "our," and "we" refer to Newmont Corporation together with our affiliates and subsidiaries, unless the context otherwise requires.

On November 6, 2023, we completed the acquisition of Newcrest Mining Limited ("Newcrest") ("the Newcrest transaction"). Results of Newcrest for the period November 6 to December 31, 2023 and the year ended December 31, 2024 are included in this report. For further information, refer to Note 3 to the Consolidated Financial Statements.

Based on a comprehensive review of the Company's portfolio of assets following the Newcrest transaction, the Company's Board of Directors approved a portfolio optimization program to divest six non-core assets and a development project in February 2024. The non-core assets to be divested include Akyem, CC&V, Éléonore, Porcupine, Musselwhite, Telfer, and a development project in Canada. In February 2024, the Company concluded that these non-core assets and the development project met the accounting requirements to be presented as held for sale in the first quarter of 2024. Subsequently in the second half of 2024, the Company entered into definitive agreements to sell the Telfer, Akyem, Musselwhite, Éléonore, and CC&V reportable segments, of which Telfer closed in 2024. In January 2025, the Company entered into a definitive agreement to sell the Porcupine reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information on divestitures.

Segment Information

The Company's reportable segments consist of each of its 16 mining operations that it manages and its 38.5% proportionate interest in Nevada Gold Mines ("NGM") which it does not directly manage. The reportable segments at December 31, 2024 include certain reportable segments that are designated as held for sale and exclude those which have been divested. Refer to Note 3 to the Consolidated Financial Statements for further information on divestitures.

For information on acquisitions and divestitures impacting the comparability of our results, refer to Note 3 to the Consolidated Financial Statements.

Refer to Item 1A, Risk Factors, below, and Note 4 to the Consolidated Financial Statements for further information relating to our reportable segments. Refer to Note 5 to the Consolidated Financial Statements for information relating to domestic and export sales and lack of dependence on a limited number of customers.

Products

References in this report to "attributable" means that portion of gold, copper, silver, lead, or zinc produced, sold or included in proven and probable reserves and measured, indicated, and inferred resources based on our proportionate ownership, unless otherwise noted.

Gold

General. The details of our consolidated and attributable gold production from continuing operations are set forth below:

	Year Ended December 31,		
	2024	2023	2022
Consolidated gold ounces produced (thousands)	6,545	5,401	5,786
Attributable gold ounces produced (thousands)	6,849	5,545	5,956
Attributable gold ounces produced from equity method investments (thousands):			
Pueblo Viejo (40.0%)	235	224	285
Fruta del Norte (32.0%) ⁽¹⁾	138	—	—
	<u>373</u>	<u>224</u>	<u>285</u>

⁽¹⁾ The Fruta del Norte mine is wholly owned and operated by Lundin Gold Inc. ("Lundin Gold"). The Company acquired a 32.0% interest in Lundin Gold through the Newcrest transaction, which is accounted for as an equity method investment on a quarterly lag. As a result, results of operations were not reported until the first quarter of 2024. Refer to Notes 3 and 15 to the Consolidated Financial Statements for additional information.

For the years ended December 31, 2024, 2023 and 2022, 85%, 89% and 87%, respectively, of our *Sales* were attributable to gold. Most of our *Sales* come from the sale of refined gold. The end product at our gold operations, however, is generally doré bars. Doré is an alloy consisting primarily of gold but also containing silver and other metals. Doré is sent to refiners to produce bullion that meets the required market standard of 99.95% gold. Under the terms of our refining agreements, the doré bars are refined for a fee, and our share of the refined gold and the separately-recovered silver is credited to our account or delivered to buyers. Additionally, a portion of gold is sold in concentrate containing other metals such as copper, silver, lead, and/or zinc.

Gold Uses. Gold generally is used for fabrication or investment. Fabricated gold has a variety of end uses, including jewelry, electronics, dentistry, industrial and decorative uses, medals, medallions, and official coins. Gold investors buy gold bullion, official coins, and jewelry.

Gold Supply. A combination of mine production, recycling and draw-down of existing gold stocks held by governments, financial institutions, industrial organizations and private individuals make up the annual gold supply. Based on public information available, for the years ended December 31, 2022 through 2024, mine production has averaged approximately 75% of the annual gold supply with the remainder primarily sourced from recycled gold.

Gold Price. The following table presents the annual high, low, and average daily afternoon LBMA Gold Price over the past ten years on the London Bullion Market (\$/ounce):

Year	High	Low	Average
2025 (through February 13, 2025)	\$ 2,928	\$ 2,636	\$ 2,759
2024	\$ 2,778	\$ 1,985	\$ 2,386
2023	\$ 2,078	\$ 1,811	\$ 1,941
2022	\$ 2,039	\$ 1,629	\$ 1,800
2021	\$ 1,943	\$ 1,684	\$ 1,799
2020	\$ 2,067	\$ 1,474	\$ 1,770
2019	\$ 1,546	\$ 1,270	\$ 1,393
2018	\$ 1,355	\$ 1,178	\$ 1,268
2017	\$ 1,346	\$ 1,151	\$ 1,257
2016	\$ 1,366	\$ 1,077	\$ 1,251
2015	\$ 1,296	\$ 1,049	\$ 1,160

On February 13, 2025, the afternoon LBMA gold price was \$2,928 per ounce.

Refer to Note 2 to the Consolidated Financial Statements for information on how we recognize revenue for gold sales from doré production.

Other Co-product Metals

Generally, if a metal expected to be mined represents more than 10% to 20% of the life of mine sales value of all the metal expected to be mined, the metal is considered a co-product and recognized as *Sales* in the Consolidated Financial Statements.

Copper production at Red Chris, Boddington, Cadia, and Telfer and silver, lead, and zinc production at Peñasquito are considered co-products. Copper, silver, lead, and zinc sales are generally in the form of concentrate that is sold to smelters for further treatment and refining.

The following table details consolidated co-product production and the percentage of *Sales* that was attributable to copper, silver, lead, and zinc for the years ended December 31, 2024, 2023, and 2022:

	2024		2023		2022	
	Co-product Production	Sales as % of Total Sales	Co-product Production	Sales as % of Total Sales	Co-product Production	Sales as % of Total Sales
Copper (pounds/millions) ⁽¹⁾	338	7 %	145	5 %	84	3 %
Silver (ounces/millions) ⁽²⁾	33	4 %	18	3 %	30	5 %
Lead (pounds/millions) ⁽²⁾	212	1 %	113	1 %	149	1 %
Zinc (pounds/millions) ⁽²⁾	569	3 %	230	2 %	377	4 %

⁽¹⁾ For the years December 31, 2024 and 2023, copper co-product production came from Red Chris, Boddington, Cadia, and Telfer. All of our copper co-product production came from Boddington for the year ended December 31, 2022.

(2) All of our silver, lead, and zinc co-product production came from Peñasquito.

By-product Metals

If a metal expected to be mined falls below the co-product sales value percentages, the metal is considered a by-product. Revenues from by-product sales are credited to *Costs applicable to sales* in the Consolidated Financial Statements.

Aside from the co-product sales at Red Chris, Peñasquito, Boddington, Cadia, and Telfer, copper and silver produced at other Newmont sites are by-product metals.

Gold and Other Metals Processing Methods

Doré. Gold is extracted from naturally-oxidized ores by either milling or heap leaching, depending on the amount of gold contained in the ore, the amenability of the ore to treatment and related capital and operating costs. Higher grade oxide ores are generally processed through mills, where the ore is ground into a fine powder and mixed with water into a slurry, which then passes through a carbon-in-leach circuit to recover the gold. Lower grade oxide ores are generally processed using heap leaching. Heap leaching consists of stacking crushed or run-of-mine ore on impermeable, synthetically lined pads where a weak cyanide solution is applied to the surface of the heap to dissolve the gold contained within the ore. In both cases, the gold-bearing solution is then collected and pumped to process facilities to remove the gold by collection on carbon or by zinc precipitation.

Gold contained in ores that are not naturally-oxidized can be directly milled if the gold is liberated and amenable to cyanidation, generally known as free milling ores. Ores that are not amenable to cyanidation, known as refractory ores, require more costly and complex processing techniques than oxide or free milling ore. Higher grade refractory ores are processed through either roasters or autoclaves. Roasters heat finely ground ore to a high temperature, burn off the carbon and oxidize the sulfide minerals that prevent efficient leaching. Autoclaves use heat, oxygen and pressure to oxidize sulfide ores.

Some gold sulfide ores may be processed through a flotation plant. In flotation, ore is finely ground, turned into slurry, then placed in a tank known as a flotation cell. Chemicals are added to the slurry causing the gold-containing sulfides to attach to air bubbles and float to the top of the tank. The sulfides are removed from the cell and converted into a concentrate that can then be processed in an autoclave, roaster, or fine grinding circuit to recover the gold through leaching. Gold-bearing solution is then plated onto cathodes in an electrowinning process or precipitated using zinc powder. In both cases, the precipitate is melted with fluxes in a furnace to produce doré.

Concentrate. Ore containing zinc, silver, lead, and gold is delivered to a crushing and grinding plant which feeds a sulfide processing plant. The sulfide processing plant primarily comprises lead and zinc flotation stages. In the lead and zinc flotation, the slurry is conditioned with reagents to activate the desired minerals and produce lead and zinc concentrate. The lead concentrate is highly enriched in gold and silver, with a smaller fraction of the precious metal recovered in the zinc concentrate. The resulting concentrate is sold to smelters or traders for further processing.

Ore containing copper and gold is crushed to a coarse size at the mine and then transported via conveyor to a process plant, where it is further crushed and then finely ground as a slurry. The ore is initially treated by successive stages of flotation resulting in a gold/copper concentrate containing approximately 10% to 26% copper and is dewatered and transported off-site. The flotation tailings have a residual gold content that is recovered in a carbon-in-leach circuit.

A summary of product and form by segment is set forth below.

Segment	Products ⁽¹⁾	Form
Brucejack, Canada	Gold	Doré, Concentrate
Red Chris, Canada	Gold, Copper	Concentrate
Peñasquito, Mexico	Gold, Silver, Lead, Zinc	Doré, Concentrate ⁽²⁾
Merian, Suriname	Gold	Doré
Cerro Negro, Argentina	Gold	Doré
Yanacocha, Peru	Gold	Doré
Boddington, Australia	Gold, Copper	Doré, Concentrate
Tanami, Australia	Gold	Doré
Cadia, Australia	Gold, Copper	Doré, Concentrate
Lihir, Papua New Guinea	Gold	Doré
Ahafo, Ghana	Gold	Doré
NGM, U.S.	Gold	Doré, Concentrate
Held for Sale ⁽³⁾		
CC&V, U.S.	Gold	Doré
Musselwhite, Canada	Gold	Doré
Porcupine, Canada	Gold	Doré
Éléonore, Canada	Gold	Doré
Akyem, Ghana	Gold	Doré
Divested ⁽⁴⁾		
Telfer, Australia	Gold, Copper	Doré, Concentrate

⁽¹⁾ Products listed are only for gold and co-product metals. See above for further information on co-product classification.

⁽²⁾ In the fourth quarter of 2023, the Company abandoned the pyrite leach plant at Peñasquito resulting in no production of doré for the year ended 2024. Refer to Note 9 to the Consolidated Financial Statements for further information.

⁽³⁾ Refer to Note 3 to the Consolidated Financial Statements for further information on held for sale.

⁽⁴⁾ In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information.

Competition

The top 10 producers of gold comprise approximately twenty-five percent of total worldwide mined gold production. We currently rank as the top gold producer with approximately five percent of estimated total worldwide mined gold production. Our competitive position is based on the size and grade of our ore bodies anchored in a large portfolio of Tier 1 assets located in favorable mining jurisdictions. A Tier 1 asset is defined as having, on average over such asset's mine life: (1) production of over 500,000 GEOs per year on a consolidated basis, (2) average AISC per oz in the lower half of the industry cost curve, (3) an expected mine life of over 10 years, and (4) operations in countries that are classified in the A and B rating ranges for Moody's, S&P and Fitch.

We have a diverse portfolio of mining operations with varying ore grades and cost structures. Our costs are driven by the location, grade and nature of our ore bodies, and the level of input costs, including energy, labor and equipment. The metals markets are cyclical, and our ability to maintain our competitive position over the long term is based on our ability to acquire and develop quality deposits, hire and retain a skilled workforce, and to manage our costs.

Licenses and Concessions

Other than operating licenses for our mining and processing facilities, there are no third-party patents, operating licenses or franchises material to our business. In many countries, however, we conduct our mining and exploration activities pursuant to land-related licenses which include leases, concessions, claims, or prospecting licenses granted by the host government. These countries include, among others, the United States, Canada, Mexico, Peru, Suriname, Chile, Argentina, Australia, Papua New Guinea, Ecuador, Fiji, and Ghana. Refer to Item 2, Properties, below for further information on land-related licenses and concessions by property. The concessions and contracts are subject to the political risks associated with the host country. Refer to Item 1A, Risk Factors, below for further information.

Condition of Physical Assets and Insurance

Our business is capital intensive and requires ongoing capital investment for the replacement, modernization or expansion of equipment and facilities. Refer to Results of Consolidated Operations and Liquidity and Capital Resources within Part II, Item 7, MD&A, for further information.

We maintain insurance policies against property loss and business interruption and insure against risks that are typical in the operation of our business, in amounts that we believe to be reasonable. Such insurance, however, contains exclusions and limitations on coverage, particularly with respect to environmental liability and political risk. There can be no assurance that claims would be paid under such insurance policies in connection with a particular event. Refer to Item 1A, Risk Factors, below for further information.

Environmental, Social and Governance

Overview. Focusing on environmental, social and governance ("ESG") practices are an important part of Newmont's business. Widely recognized for our principled ESG practices, we have been consistently ranked as a leader in the mining and metal sector S&P Global, and we have been listed on the Dow Jones Sustainability World Index since 2007.

ESG is a key part of how we make investment decisions and central to our culture and purpose to create value and improve lives through sustainable and responsible mining. Sustainability and safety are integrated into the business at all levels of the organization through our global policies, standards, strategies, business plans, and remuneration plans. Our global strategies, notably those related to Sustainability and Health, Safety, and Security, direct all levels of our business in environmental stewardship, strong workforce safety and health practices, social responsibility and good governance. With clear targets, open communication and transparent reporting, we strive for continuous improvement to meet the evolving expectations of investors, governments, communities and other key stakeholders, and to contribute to a sustainable future for all.

Stakeholder Engagement. We engage regularly with relevant stakeholders, who we consider to be any person or organization potentially impacted by our activities or influential to our success, which allows us to gain a greater understanding of their needs, interests and perspectives while, at the same time, encouraging shared decision making to promote mutually beneficial outcomes. These engagements also inform what information is most useful for stakeholders for the purposes of our non-financial reporting. Newmont also engages with and commits to meeting the expectations of a variety of organizations at a global, regional, national and local level - and where applicable - adhering to these organizations' high standards of governance, social and environmental policies and performance. These memberships and other external commitments reflect our values, support our approach to working collaboratively on best practices across several key matters and allow external stakeholders to hold us accountable. Our participation in industry initiatives, wherein we often take a leadership role, allows us to inform and influence global standards and practices, as well as gain insight into emerging expectations and issues.

Reporting. We believe that transparency and accountability are key attributes of governance. Since 2003, Newmont has been reporting on how we manage the sustainability issues of relevance to stakeholders around the globe. Our sustainability report provides an annual review of non-financial performance on governance, strategy and management approach, risk management, and performance and targets in key areas that include health, safety and security, workforce, the environment, supply chain, social responsibility, business integrity and compliance, value sharing, and equity, inclusion and diversity domains. Our sustainability report is compiled in accordance with the Global Reporting Initiative ("GRI") 2021 Universal Standards Core option, the GRI Mining and Metals Sector Supplement, and the Sustainability Accounting Standards Board ("SASB") Metals & Mining standards. Data is subject to an external limited assurance review and reflects Newmont's commitment to transparency and reporting obligations as a founding member of the International Council on Mining and Metals ("ICMM") and as an early adopter of the United Nations ("UN") Guiding Principles Reporting Framework. Additionally, our sustainability report aligns with the requirements the ICMM's Mining Principles' Performance Expectations and Position Statements, the GISTM and the World Gold Council's Responsible Gold Mining Principles.

Newmont's sustainability reporting suite also includes our sustainability-linked bond framework, ESG data tables, conflict-free gold report, modern slavery statement, policy influence disclosures, political spending disclosures, taxes and royalties contributions report, CDP (formerly, "Carbon Disclosure Project") responses, and other reports and responses, which can be found on our website at www.newmont.com/sustainability.

The information on our website, including, without limitation, in the annual sustainability report and climate report, should not be deemed incorporated by reference into this annual report or otherwise "filed" for purposes of Section 18 of the Securities Exchange Act of 1934, as amended, or otherwise subject to the liabilities of that section.

Environmental Practices

Climate Change. We accept the Intergovernmental Panel on Climate Change's ("IPCC") assessment of climate science, and we acknowledge that human activities contribute to climate change and business has an important role in addressing this global challenge. It is our firm belief that climate change is one of the greatest global challenges of our time. For a discussion of climate-related risks, refer to Item 1A, Risk Factors.

Climate Targets and Initiatives to Achieve. We believe that value-creation industries like mining have a responsibility to drive actions to transition us to a low-carbon economy. In an effort to play our part in addressing climate change, in 2020 we announced science-based, GHG emissions reduction targets of 32% for Scope 1 and Scope 2 and 30% for Scope 3 by 2030 ("2030 climate targets"), with an ultimate goal of being carbon neutral by 2050. Newmont's emission calculation methodology framework dictates that any change of 5% resulting from divestitures or acquisitions requires recalculation of baseline data. The acquisition of Newcrest in November 2023 triggered Newmont to recalculate the target baseline years and trailing years of GHG emissions data. We are continuing to review our targets and roadmap which may result in amendments in the future. Investors are reminded that climate-

related targets are subject to aspirational management goals and forward-looking statements, which remain subject to risks and uncertainties. Refer to Forward-Looking Statements, below, and Item 1A, Risk Factors of this report under the heading *"Our operations and projects are subject to a range of risks related to transitioning the business to meet regulatory, societal and investor expectations for operating in a low-carbon economy."*

Our most significant opportunities to reduce emissions exist in building or deploying cleaner energy solutions at our mine sites, as well as the greening of the electrical grid that supplies energy to our operations. Since announcing our 2030 climate targets, we have taken steps to invest in climate change initiatives in support of our goal. We also see sustainable finance as a way to further demonstrate Newmont's focus on climate change. In December 2021, Newmont became the first in the mining industry to issue a sustainability-linked bond, with the registered public offering of \$1 billion aggregate principal amount of 2.6% Sustainability-Linked Senior Notes due 2032 (the "Notes"), with the coupon linked to Newmont's performance against key ESG goals regarding 2030 climate targets. In connection with the issuance of the Notes, Newmont published a Sustainability-Linked Bond Framework and obtained a second party opinion on the framework from Institutional Shareholder Services group of companies ("ISS") ESG. The Notes align Newmont's business and financing by creating a direct link between its sustainability performance and funding strategies.

In addition to our focus on reducing carbon emissions, we believe that access to clean, safe water is a human right, and reliable water supplies are vital for hygiene, sanitation, livelihoods and the health of the environment. Because water is also critical to our business, we recognize the need to use water efficiently, protect water resources, and collaborate with the stakeholders within the watersheds where we operate to effectively manage this shared resource. We operate in water-stressed areas with limited supply and increasing population and water demand. Increasing pressure on water use may occur due to increased populations in and around communities in proximity to our operations.

Biodiversity. Our operations span five continents in a range of ecosystems that include tropical, desert and arctic climates. We understand the impact our activities can have on the environment and are committed to protect and prevent – or otherwise minimize, mitigate and remediate – those impacts in the areas where we operate through responsible management during all aspects of the mine lifecycle and collaboration with stakeholders to develop integrated approaches to land use.

Our Environmental Impact. We conduct our operations so as to protect public health and the environment and believe our operations are in compliance with applicable laws and regulations in all material respects. Our mining and exploration activities are subject to various laws and regulations in multiple jurisdictions governing the protection of the environment. These laws and regulations are continually changing.

Our Environmental Reclamation and Remediation Commitments. Each operating mine has a reclamation plan in place that meets, in all material respects, applicable legal and regulatory requirements. We are also involved in several matters concerning environmental obligations associated with former, primarily historical, mining activities. Generally, these matters concern developing and implementing remediation plans at the various sites. The reclamation and remediation stage is a multifaceted process with complex risks. Successfully closing and reclaiming mines is crucial for gaining stakeholder trust and maintaining social acceptance. Notably, Newmont is committed to the implementation of the GISTM and disclosure of implementation status for tailings facilities by August 2025. Conformance with the GISTM remains ongoing and has and may continue to result in further increases to our sustaining costs and estimated closure costs. Additionally, laws, regulations and permit requirements focused on water management and discharge requirements for operations and water treatment in connection with closure are becoming increasingly stringent. Compliance with water management and discharge quality remains dynamic and has and may continue to result in further increases to our estimated closure costs. For a discussion of the most significant reclamation and remediation activities, refer to Note 6 and Note 25 to the Consolidated Financial Statements. For discussion of regulatory, tailings storage facilities, water, climate and other environmental risks, refer to Item 1A, Risk Factors, for additional information.

Social Practices

Our People. At Newmont, one of the strategic pillars is people.

The success of our business comes from the accomplishments and well-being of our employees and contractors. That is why we strive to build a workplace culture that fosters leaders where everyone belongs, thrives, and is valued.

At December 31, 2024, approximately 22,200 people were employed by Newmont and Newmont subsidiaries and approximately 20,400 people were working as contractors in support of Newmont's operations and attainment of our objectives. Additionally, at December 31, 2024, approximately 30% of our workforce were members of a union or participated in collective bargaining. We are committed to fostering solid relationships with all members of our workforce based on trust, treating workers fairly and providing them with safe and healthy working conditions. For a discussion of related risks, refer to Item 1A, Risk Factors.

Our people strategy represents a multi-year journey, and its three pillars and respective aspirations include: (i) leadership – grow and attract exceptional leaders for our Company, the industry and beyond; (ii) inclusion, diversity and equity – through bold actions cultivate an inclusive, diverse and engaged workforce; and (iii) people experiences – foster a meaningful work experience that enables our culture and strategy to flourish. The Board of Directors' Leadership Development and Compensation Committee holds reviews with management every quarter and on an ad hoc basis as needed to ensure appropriate management of human capital and progress against our stated goals.

The people who work on our behalf give us a competitive advantage. Through our global people strategy, we align our talent management efforts with the overall business strategy. The strategy's focus areas include enhancing the employee experience and evolving for future workforce needs; building our bench strength and leadership capabilities; developing effective labor relations that align stakeholders with a shared future; and improving inclusion.

Inclusion, Diversity, and Equity. Inclusion is one of our five core values. We support this through a focus on our culture and four key areas of inclusion: (i) start with respect; (ii) listen to and engage employees; (iii) leverage dissonance, consistency, and persistence toward a future state culture; and (iv) focus on the career progress of underrepresented team members. Newmont is an equal employment opportunity employer and Newmont's policy is to not make employment-related decisions based on gender or any other protected basis.

In our annual sustainability report, Newmont voluntarily reports workforce and labor information in accordance with GRI Standards, including data on workforce demographics, compensation and equal remuneration, gender diversity, union representation, labor relations, employee turnover, hiring representation, and training and development. Newmont also reports employment data in U.S. Equal Employment Opportunity Commission EEO-1 reports which can be found on our website. The information in our sustainability report and on our website is not incorporated by reference in this annual report.

ESG Performance-based Compensation. The importance of ESG performance is emphasized with our workforce through our training and development programs and our compensation design. Employees eligible for our short-term incentive plan are held accountable for the Company's health, safety, and sustainability performance through Newmont's performance-based compensation structure. ESG will comprise 30% of the Company's Short-term Incentive Plan payout for 2024, with 20% allocated to health & safety metrics and 10% to sustainability performance based community and environment metrics.

Additional information regarding the Company's compensation programs and performance will be provided in the 2025 Proxy Statement.

Health and Safety. Safeguarding the health and safety of our employees and contractors is fundamental to how we operate. Mining activities pose risks and hazards that must be effectively managed and controlled to minimize their impact. Safety is one of Newmont's core values, and our global Health, Safety, and Security strategy aims to advance our journey toward a workplace free from fatalities, injuries and illnesses. We believe that our operations are in compliance with applicable laws and regulations in all material respects. We continue to sustain robust controls at our operations and offices around the globe. We measure the effectiveness of our approach to managing the wide range of health and safety risks by setting measurable objectives and targets. The quality and effectiveness of our health and safety controls are audited regularly as part of our assurance and governance process.

Commitments to Communities. Gaining and maintaining the trust of stakeholders impacted by a business is an ongoing endeavor. At Newmont, we use a methodical approach to managing stakeholder relationships and earning social acceptance. Through understanding and managing our activities' impacts on communities and involving local stakeholders in decision making, we aim to build ensuring relationships based on respect and mutually beneficial and sustainable development outcomes. We monitor various metrics and performance objectives to assess the effectiveness of our social acceptance approach, and to better understand both the positive and negative impacts that our activities have on host communities. We seek to include impacted communities and groups in determining mitigation or optimization of these impacts in a manner that is culturally appropriate and with the consent of those impacted. We also recognize our responsibility to respect and promote human rights.

Governance Practices

Board of Directors Oversight. Newmont believes that strong corporate governance, with management accountability and active oversight from an experienced Board of Directors, is essential for mitigating risk, serving in the best interests of all stakeholders and creating long-term value. The highest level of oversight at Newmont resides with Newmont's Board of Directors (the "Board"). The Board plays a critical role, overseeing the Company's business strategy and the overall goal of delivering long-term value creation for stockholders and other stakeholders. The members of Newmont's Board bring a broad range of backgrounds, experiences and talents, along with ethnic, racial and gender diversity, to our governance process. As of December 31, 2024, the Board was comprised of 13 directors (12 independent non-executive directors and one executive director) with more than 58% of the independent directors with a form of ethnic, racial or gender diversity to the Board, with 42% female representation among independent directors.

Four core Board committees, Audit, Corporate Governance and Nominating, Leadership Development and Compensation, and Safety and Sustainability, provide oversight and guidance in these key areas. Each committee assists the Board in carrying out responsibilities such as assessing major risks, ensuring high standards of ethical business conduct, succession planning and talent management, and approving and providing oversight of the sustainability strategy, which includes commitments to adoption of best practices in promotion of a healthy and safe work environment, and environmentally sound and socially responsible mining and resource development. All members of these four core Committees are independent, as defined in the listing standards of the New York Stock Exchange and Newmont's Corporate Governance Guidelines. More information on Newmont's Board, governance practices and risk oversight can be found in our annual Proxy Statement.

Code of Conduct. Our global Code of Conduct (the "Code"), which was adopted and approved by Newmont's Board, forms the foundation for our integrity expectations, and six overarching policies, along with our standards on Anti-Corruption, Conflicts of

Interest, Gifts and Entertainment and U.S. Export Compliance, state the minimum requirements for conducting business honestly, ethically and in the best interests of Newmont. Our Code reflects our belief that as important as what we do is how we do it. It requires all representatives of Newmont to demonstrate our values – safety, integrity, sustainability, inclusion and responsibility – in every aspect of our professional lives and ultimately, to live up to our purpose, which is to create value and improve lives through sustainable and responsible mining.

Governance Materials. Our Corporate Governance Guidelines, Proxy Statement, policies, and the charters for the Committees of Board of Directors are available on our website, www.newmont.com, and are available free of charge upon request to Investor Relations at our principal executive office. We also file with the New York Stock Exchange an annual certification that our Chief Executive Officer is unaware of any violation of the NYSE's corporate governance standards. We make available free of charge through our website this annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act, as soon as reasonably practicable after such material is electronically filed with or furnished to the SEC. The information on our website is not incorporated by reference in this report.

Risk Factor Summary

We are subject to a variety of risks and uncertainties, including risks related to our operations and business, financial risks, risks related to our industry, environmental and climate risks, risks related to the jurisdictions in which we operate, risks related to our workforce, legal risks and risks related to our common stock, which could have a material adverse effect on our business, financial condition, results of operations and cash flows. Risks that we deem material are described in Item 1A, Risk Factors of this report. These risks include, but are not limited to, the following:

- A substantial or extended decline in gold, copper, silver, lead or zinc prices would have a material adverse effect on us.
- We may be unable to replace gold, copper, silver, lead or zinc reserves as they become depleted.
- Estimates of proven and probable reserves and measured, indicated and inferred resources are uncertain and actual recoveries may vary from our estimates.
- Estimates relating to projects and mine plans of existing operations are uncertain and we may incur higher costs and lower economic returns than estimated.
- Increased operating and capital costs could affect our profitability.
- Mine closure, reclamation and remediation costs for environmental liabilities may exceed the provisions we have made.
- Damage to our reputation may result in decreased investor confidence, challenges in maintaining positive community relations and can pose additional obstacles to our ability to develop our projects, which may result in a material adverse impact on our business, financial position, results of operations and growth prospects.
- We are dependent upon information technology and operational technology systems, which are subject to disruption, damage, failure or cybersecurity attacks and risks associated with implementation, upgrade, operation and integration.
- To the extent we hold or acquire interests in any joint ventures or enter into any joint ventures, our interests in these properties is subject to risks normally associated with the conduct of joint ventures.
- Our operations and business have in the past been affected by the COVID-19 pandemic, and may be materially and adversely impacted in the future by pandemics, epidemics and other health emergencies.
- Increased exposure to foreign exchange fluctuations and capital controls may adversely affect Newmont's costs, earnings and the value of some of our assets.
- Future funding requirements may affect our business, our ability to pursue new business opportunities, invest in existing and new projects, pay cash dividends or engage in share repurchase transactions.
- Our long-lived assets and goodwill could become impaired, which could have a material non-cash adverse effect on our results of operations.
- Our ability to recognize the benefits of deferred tax assets is dependent on future cash flows and taxable income.
- Any downgrade in the credit ratings assigned to our debt securities could increase our future borrowing costs and adversely affect the availability of new financing.
- Returns for investments in pension plans are uncertain.
- We may experience increased costs or losses resulting from the hazards and uncertainties associated with mining.
- Mining operations involve a high degree of risk, including hazards related to the use of explosives and hazardous chemicals and critical equipment failure.

- We rely on our supply chain operations to procure goods and services to support our operations and projects, and competition with other natural resource companies, and shortage of critical parts, services and equipment may adversely affect our operations and development projects.
- We may be unable to obtain or retain necessary permits and land or mining tenure which could adversely affect our operations and projects.
- Mining companies are increasingly required to consider and provide benefits to the communities and countries in which they operate in order to maintain operations.
- Illegal mining and artisanal mining occurs on or adjacent to certain of our properties exposing such sites to security risks.
- Civil disturbances and criminal activities can disrupt business and expose the Company to liability.
- Our operations and projects face substantial regulation of health and safety.
- Our operations and projects are subject to extensive environmental laws and regulations.
- Our operations and projects are subject to a range of risks related to transitioning the business to meet regulatory, societal and investor expectations for operating in a low-carbon economy.
- Our operations and projects are subject to a range of transitional and physical risks related to climate change.
- Our Company and the mining industry are facing continued geotechnical, geothermal and hydrogeological challenges, which could adversely impact our production and profitability.
- Our operations and projects may be adversely affected by rising energy prices or energy shortages.
- Our operations and projects are dependent on the availability of sufficient water supplies and subject to water-related risks.
- Our operations and projects are subject to risks related to our relationships and/or agreements with local communities, including Indigenous Peoples, and laws for the protection of cultural heritage.
- Our operations and projects are subject to risks of doing business in multiple jurisdictions.
- New or changing legislation and tax risks in certain operating jurisdictions could negatively affect us.
- Changes in mining or investment policies or shifts in political and social attitudes in the jurisdictions in which we operate may adversely affect our operations or profitability.
- Our operations at Yanacocha and projects in Peru are subject to political and social unrest risks.
- Our Merian operation in Suriname is subject to political, security and economic risks.
- Our operations at Ahafo and Akyem in Ghana are subject to political, economic, security and other risks.
- Our operations in Argentina are susceptible to risk as a result of economic and political instability in Argentina, regulatory risk and labor unrest.
- Our operations at Lihir and project at Wafi-Golpu in Papua New Guinea are subject to political and regulatory risks and other uncertainties.
- Our operations and projects in Canada are subject to legal and regulatory risks and other uncertainties in connection with claims and challenges by Indigenous groups.
- Our business depends on good relations with our employees.
- Our Peñasquito operation in Mexico is subject to social, political, regulatory, and economic risks.
- We may not be able to operate successfully if we are unable to recruit, hire, retain and develop key personnel and a qualified and diverse workforce. In addition, we are dependent upon our employees being able to perform their jobs in a safe and respectful work environment.
- We rely on contractors to conduct a significant portion of our operations and construction projects.
- Our business is subject to the U.S. Foreign Corrupt Practices Act, and other related anti-bribery laws and regulations. A breach or violation of these rules and regulations could lead to substantial sanctions and civil and criminal prosecution, as well as fines and penalties, litigation, loss of licenses or permits and other collateral consequences and reputational harm.
- Our business is subject to U.S. export control laws, economic sanctions, and other international trade compliance regulations with extraterritorial reach. A breach or violation of these laws could lead to substantial sanctions, civil and criminal prosecution, fines, penalties, litigation, loss of licenses or permits, and other collateral consequences, including reputational harm.
- Title to some of our properties may be insufficient, defective, or challenged.

- The price of our common stock may be volatile, which may make it difficult for you to sell the common stock at the price you paid or at prices you find attractive.
- Holders of our common stock, CDIs and PDIs may not receive dividends.
- Compliance with exchange listing rules as a foreign exempt listing may differ from investor expectations.
- Assets held for sale may not ultimately be divested and we may not receive all or any deferred compensation.
- The Company's asset divestitures place demands on the Company's management and resources, the sale of divested assets may not occur as planned or at all, and the Company may not realize the anticipated benefits of such divestitures.

Additional risks and uncertainties not presently known to us or that we currently deem immaterial also may impair our business, financial condition, results of operations and cash flows.

Forward-Looking Statements

Certain statements contained in this report (including information incorporated by reference herein) are "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and are intended to be covered by the safe harbor provided for under these sections. Words such as "expect(s)," "feel(s)," "believe(s)," "will," "may," "anticipate(s)," "estimate(s)," "should," "intend(s)," "target(s)," "plan(s)," "potential," and similar expressions are intended to identify forward-looking statements. Our forward-looking statements may include, without limitation:

- estimates regarding future earnings and the sensitivity of earnings to gold, copper, silver, lead, zinc and other metal prices;
- estimates of future mineral production and sales;
- estimates of future production costs, other expenses and taxes for specific operations and on a consolidated basis, including estimates of future costs applicable to sales and all-in sustaining costs;
- estimates of future cash flows and the sensitivity of cash flows to gold, copper, silver, lead, zinc and other metal prices;
- estimates of future capital expenditures, including development and sustaining capital, as well as construction or closure activities and other cash needs, for specific operations and on a consolidated basis, and expectations as to the funding or timing thereof;
- estimates as to the projected development of certain ore deposits or projects, such as the Tanami Expansion 2, Ahafo North, Yanacocha Sulfides, Pamour, Cerro Negro District Expansion 1, Cadia Panel Caves, Red Chris Block Cave and Wafi-Golpu, including without limitation expectations for the production, milling, costs applicable to sales, all-in sustaining costs, mine-life extension, the costs of such development and other capital costs, financing plans for these deposits and expected production commencement dates, construction completion dates and other timelines;
- estimates of reserves and resources statements regarding future exploration results and reserve and resource replacement and the sensitivity of reserves to metal price changes;
- statements regarding the availability of, and terms and costs related to, future borrowing or financing and expectations regarding future share repurchase transactions, debt repayments or debt tender transactions;
- statements regarding future cash flows and returns to stockholders, including with respect to future dividends, the dividend framework and expected payout levels;
- estimates regarding future exploration expenditures and discoveries;
- statements regarding fluctuations in financial and currency markets;
- estimates regarding potential cost savings, productivity, operating performance and ownership and cost structures;
- expectations regarding statements regarding future or recently completed transactions, including, without limitation, statements related to projected benefits, synergies and costs associated with acquisitions and related matters;
- expectations regarding potential divestments, including, without limitation, assets held for sale;
- estimates of future cost reductions, synergies, including pre-tax synergies, savings and efficiencies, and future cash flow enhancements through portfolio optimization;
- expectations of future equity and enterprise value;
- expectations regarding the start-up time, design, mine life, production and costs applicable to sales and exploration potential of our projects;
- statements regarding future hedge and derivative positions or modifications thereto;
- statements regarding local, community, political, economic or governmental conditions and environments;

- statements and expectations regarding the impacts of COVID-19 and variants thereof and other health and safety conditions;
- statements regarding the impacts of changes in the legal and regulatory environment in which we operate, including, without limitation, relating to regional, national, domestic and foreign laws;
- statements regarding climate strategy and expectations regarding greenhouse gas emission targets and related operating costs and capital expenditures;
- statements regarding expected changes in the tax regimes in which we operate, including, without limitation, estimates of future tax rates and estimates of the impacts to income tax expense, valuation of deferred tax assets and liabilities, and other financial impacts;
- estimates of income taxes and expectations relating to tax contingencies or tax audits;
- estimates of future costs, accruals for reclamation costs and other liabilities for certain environmental matters, including without limitation, in connection with water treatment, such as the Yanacocha water treatment plants, and tailings management;
- statements relating to potential impairments, revisions or write-offs, including without limitation, the result of fluctuation in metal prices, unexpected production or capital costs, or unrealized reserve potential;
- estimates of pension and other post-retirement costs;
- statements regarding estimates of timing of adoption of recent accounting pronouncements and expectations regarding future impacts to the financial statements resulting from accounting pronouncements; and
- estimates of future cost reductions, synergies, savings and efficiencies in connection with full potential programs and initiatives.

Where we express an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, our forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by those forward-looking statements. Such risks include, but are not limited to:

- there being no significant change to current geotechnical, metallurgical, hydrogeological and other physical conditions;
- the price of gold, copper, silver, lead, zinc and other metal prices and commodities;
- the cost of operations and prices for key supplies;
- currency fluctuations, including exchange rate assumptions;
- other macroeconomic events impacting inflation, interest rates, supply chain, and capital markets;
- operating performance of equipment, processes and facilities;
- environmental impacts and geotechnical challenges including in connection with climate-related and other catastrophic events;
- labor relations;
- healthy and safety impacts including in connection with global events, pandemics, and epidemics;
- timing of receipt of necessary governmental and regulatory permits or approvals;
- domestic and foreign laws or regulations, particularly relating to the environment, mining and processing;
- changes in tax laws;
- political developments in any jurisdiction in which Newmont operates being consistent with its current expectations;
- our ability to obtain or maintain necessary financing; and
- other risks and hazards associated with mining operations.

More detailed information regarding these factors is included in Item 1A, Risk Factors and elsewhere throughout this report. Many of these factors are beyond our ability to control or predict. Given these uncertainties, readers are cautioned not to place undue reliance on our forward-looking statements.

All subsequent written and oral forward-looking statements attributable to Newmont or to persons acting on its behalf are expressly qualified in their entirety by these cautionary statements. We disclaim any intention or obligation to update publicly any forward-looking statements, whether as a result of new information, future events or otherwise, except as may be required under applicable securities laws.

Available Information

Newmont maintains a website at www.newmont.com and makes available, through the Investor Relations section of the website, its Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, Section 16 filings and all amendments to those reports, as soon as reasonably practicable after such material is electronically filed with the SEC. Certain other information, including Newmont's Corporate Governance Guidelines, the charters of key committees of its Board of Directors and its Code of Conduct are also available on the website.

ITEM 1A. RISK FACTORS (dollars in millions, except per share, per ounce and per pound amounts)

Our business activities are subject to significant risks, including those described below. You should carefully consider these risks. If any of the described risks actually occurs, our business, financial position and results of operations could be materially adversely affected. Such risks are not the only ones we face and additional risks and uncertainties not presently known to us or that we currently deem immaterial may also affect our business. This report contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those anticipated in the forward-looking statements as a result of a number of factors, including the risks described below. Refer to "Forward-Looking Statements."

Risks Related to Our Operations and Business

A substantial or extended decline in gold, copper, silver, lead or zinc prices would have a material adverse effect on us.

Our business is dependent on the prices of gold, copper, silver, lead and zinc, which fluctuate on a daily basis and are affected by numerous factors beyond our control. Factors tending to influence prices include:

- Gold sales, purchases or leasing by governments and central banks;
- Speculative short positions taken by significant investors or traders in gold, copper, silver, lead, zinc or other metals;
- The relative strength of the U.S. dollar;
- The monetary policies employed by the world's major Central Banks;
- The fiscal policies employed by the world's major industrialized economies;
- Expectations of the future rate of inflation;
- Interest rates;
- Recession or reduced economic activity in the United States, Australia, China, India and other industrialized or developing countries;
- Decreased industrial, jewelry, base metal or investment demand;
- Increased import and export taxes;
- Increased supply from production, disinvestment and scrap;
- Forward sales by producers in hedging or similar transactions;
- Availability of cheaper substitute materials; and
- Changing investor or consumer sentiment, including in connection with transition to a low-carbon economy, investor interest in crypto currencies and other investment alternatives and other factors.

Average gold prices for 2024 were \$2,386 per ounce (2023: \$1,941; 2022: \$1,800), average copper prices for 2024 were \$4.15 per pound (2023: \$3.85; 2022: \$3.99), average silver prices for 2024 were \$28.27 per ounce (2023: \$23.35; 2022: \$21.73), average lead prices for 2024 were \$0.94 per pound (2023: \$0.97; 2022: \$0.98), and average zinc prices for 2024 were \$1.26 per pound (2023: \$1.20; 2022: \$1.58). Any decline in our realized prices adversely impacts our revenues, net income and operating cash flows, particularly in light of our strategy of not engaging in hedging transactions with respect to sales of gold, copper, silver, lead or zinc. We have recorded impairments in the current year and may experience additional impairments in future years as a result of lower gold, copper, silver, lead or zinc prices.

In addition, sustained lower gold, silver, copper, zinc or lead prices can:

- Reduce revenues further through production declines due to cessation of the mining of deposits, or portions of deposits, that become uneconomic at sustained lower metal prices;
- Reduce or eliminate the profit that we currently expect from ore stockpiles and ore on leach pads and increase the likelihood and amount that the Company might be required to record write downs related to the carrying value of its stockpiles and ore on leach pads;
- Halt or delay the development of new projects;

- Reduce funds available for exploration and advanced projects with the result that depleted reserves may not be replaced; and
- Reduce existing reserves by removing ores from reserves that can no longer be economically processed at prevailing prices.

We may be unable to replace gold, copper, silver, lead or zinc reserves as they become depleted.

Mining companies must continually replace reserves depleted by production to maintain production levels over the long term and provide a return on invested capital. Depleted reserves can be replaced in several ways, including expanding known ore bodies, by locating new deposits or acquiring interests in reserves from third parties. Exploration is highly speculative in nature, involves many risks and uncertainties and is frequently unsuccessful in discovering significant mineralization. Accordingly, our current or future exploration programs may not result in new mineral producing operations. Even if significant mineralization is discovered, it will likely take many years from the initial phases of exploration until commencement of production, during which time the economic feasibility of production may change.

We may consider, from time to time, the acquisition of ore reserves from others related to development properties and operating mines. Such acquisitions are typically based on an analysis of a variety of factors including historical operating results, estimates of and assumptions regarding the extent of ore reserves, the timing of production from such reserves and cash and other operating costs. Other factors that affect our decision to make any such acquisitions may also include our assumptions for future gold, copper, silver, lead or zinc prices or other mineral prices and the projected economic returns and evaluations of existing or potential liabilities associated with the property and its operations and projections of how these may change in the future. In addition, in connection with any acquisitions we may rely on data and reports prepared by third parties (including ability to permit and compliance with existing regulations) and which may contain information or data that we are unable to independently verify or confirm. Other than historical operating results, all these factors are uncertain and may have an impact on our revenue, our cash flow and other operating issues, as well as contributing to the uncertainties related to the process used to estimate reserves and resources. In addition, there may be intense competition for the acquisition of attractive mining properties.

As a result of these uncertainties, our exploration programs and any acquisitions which we may pursue may not result in the expansion or replacement of our current production with new ore reserves or operations, which could have a material adverse effect on our business, prospects, results of operations and financial position.

Estimates of proven and probable reserves and measured, indicated and inferred resources are uncertain and the volume and grade of ore actually recovered may vary from our estimates.

The mineral reserves stated in this report represent the amount of gold, copper, silver, lead, zinc and molybdenum that we estimated, at December 31, 2024, could be economically and legally extracted or produced at the time of the reserve determination. Estimates of proven and probable reserves are subject to considerable uncertainty. Such estimates are, or will be, to a large extent, based on the prices of gold, copper, silver, lead, zinc, and molybdenum and interpretations of geologic data obtained from drill holes and other exploration techniques, which data may not necessarily be indicative of future results. If our reserve estimations are required to be revised due to significantly lower gold, copper, silver, lead, zinc, and molybdenum prices, increases in operating costs, reductions in metallurgical recovery or other modifying factors, this could result in material write-downs of our investment in mining properties, goodwill and increased amortization, reclamation and closure charges.

Producers use pre-feasibility or feasibility studies for undeveloped ore bodies to derive estimates of capital and operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the predicted configuration of the ore body, expected recovery rates of metals from the ore, the costs of comparable facilities, the costs of operating and processing equipment and other factors. Actual operating and capital cost and economic returns on projects may differ significantly from original estimates. Further, it may take many years from the initial phases of exploration until commencement of production, during which time, the economic feasibility of production may change.

Additionally, resources do not indicate proven and probable reserves as defined by the SEC or the Company's standards. Estimates of measured, indicated and inferred resources are subject to further exploration and development, and are, therefore, subject to considerable uncertainty. Inferred resources, in particular, have a great amount of uncertainty as to their existence and their economic and legal feasibility. The Company cannot be certain that any part or parts of the resource will ever be converted into mineral reserves.

In addition, if the price of gold, copper, silver, lead, zinc, or molybdenum declines from recent levels, if production costs increase, grades decline, recovery rates decrease or if applicable laws and regulations are adversely changed, the indicated level of recovery may not be realized or mineral reserves or resources might not be mined or processed profitably. Similarly, mineral reserves may be impacted if assumptions relating to mine planning change or are not achieved, for example if planned improvements from our Full Potential programs are not realized. If we determine that certain of our mineral reserves have become uneconomic, this may ultimately lead to a reduction in our aggregate reported mineral reserves and resources. Consequently, if our actual mineral reserves and resources are less than current estimates, our business, prospects, results of operations and financial position may be materially impaired.

Mineral reserves and resources disclosed in this Form 10-K have been prepared in accordance with the Regulation S-K 1300. In 2021, the Company transitioned its approach to reporting and internal methodologies to take into account the required change from the SEC's Industry Guide 7 to Regulation S-K 1300. To the extent that regulators adopt new requirements and issue or modify related guidance and interpretations in the future, it could result in changes to mineral reserve and mineral resource information.

Estimates relating to projects and mine plans of existing operations are uncertain and we may incur higher costs and lower economic returns than estimated.

Mine development and expansion projects typically require a number of years and significant expenditures during the development phase before production is possible. Such projects could experience unexpected problems and delays during permitting, development, construction and mine start-up. Our decision to develop a project is typically based on the results of studies, which estimate the anticipated economic returns of a project. The actual project profitability or economic feasibility may differ from such estimates as a result of any of the following factors, among others:

- Changes in tonnage, grades and metallurgical characteristics of ore to be mined and processed;
- Changes in input commodity and labor costs, including as a result of inflation or tariffs;
- The quality of the data on which engineering assumptions were made;
- Increases in development capital and investment costs;
- Adverse geotechnical, geothermal and hydrogeological conditions;
- Availability of adequate and skilled labor force;
- Availability, supply and cost including: critical assets, water, reagents, and power;
- Costs related to environmental management and sales including waste management, monitoring and transport and storage of product sales;
- Fluctuations in inflation and currency exchange rates;
- Availability, cost and terms of financing;
- Ability to achieve anticipated benefits, synergies, savings and other efficiencies in connection with acquisitions, full potential programs and initiatives, and through portfolio optimization and divestitures;
- Delays or inability to obtain environmental or other government permits or approvals or changes in the laws and regulations related to our operations or project development;
- Changes in tax laws, customs law and tariffs, the laws and/or regulations around royalties and other taxes due to the regional and national governments and royalty agreements;
- Government instability, including in jurisdictions that do not have a long-standing or significant mining industry, such that there may be limited clarity on agreements with such governments, or decreased governmental support for development of mining projects;
- Weather or severe climate impacts, including, without limitation, prolonged or unexpected precipitation, drought and/or sub-zero temperatures;
- Potential delays and restrictions in connection with health and safety issues, including pandemics (such as COVID-19 and related variants) and other infectious diseases, such as malaria or the zika virus;
- Potential delays relating to social and community issues, including, without limitation, issues resulting in protests, road blockages or work stoppages; and
- Potential challenges to mining activities or to permits or other approvals or delays in development and construction of projects based on claims of disturbance of cultural resources or the inability to secure consent generally from Indigenous groups.

New projects require, among other things, the successful completion of feasibility studies, attention to various fiscal, tax and royalty matters, obtainment of, and compliance with, required governmental and regulatory permits and arrangements for necessary surface and other land rights. We may also have to identify adequate sources of water and power for new projects, ensure that appropriate community infrastructure (for example, reliable rail, ports, roads, and bridges) is developed to support the project and secure appropriate financing to fund a new project. These infrastructures and services are often provided by third parties whose operational activities are outside of our control. Establishing infrastructure for our development projects requires significant resources, identification of adequate sources of raw materials and supplies, and the cooperation of national and regional governments, none of which can be assured. In addition, new projects have no operating history upon which to base estimates of future financial and operating performance, including future cash flow. Thus, it is possible that actual costs may increase and economic returns may differ materially from our estimates. Consequently, our future development activities may not result in the expansion or replacement of current production with new production, or one or more of these new production sites or facilities may be less profitable than currently

anticipated or may not be profitable at all, any of which could have a material adverse effect on our results of operations and financial position.

For our existing operations, we base our mine plans on geological and metallurgical assumptions, financial projections and commodity price estimates. These estimates are periodically updated to reflect changes in our operations, including modifications to our proven and probable reserves, revisions to environmental obligations, changes in legislation and/or our political or economic environment, and other significant events associated with or impacting mining operations. Further, future positive revisions, if any, remain subject to improvements in costs, recovery, commodity price or a combination of these and other factors. Additionally, we review our operations for events and circumstances that could indicate that the carrying value of our long-lived assets may not be recoverable. If indicators of impairment are determined to exist at our mine operations, and an impairment charge is incurred, such charges are not reversible at a later date even when favorable modifications to our proven and probable reserves and measured, indicated and inferred resources, favorable revisions to environmental obligations, favorable changes in legislation and/or our political or economic environment, and other favorable events occur. As a result of these uncertainties, actual results may be less favorable than estimated returns and initial financial outlook.

Increased operating and capital costs could affect our profitability.

Costs at any particular mining location are subject to variation due to a number of factors, such as variable ore grade, changing metallurgy and revisions to mine plans in response to the physical shape and location of the ore body, as well as the age and utilization rates for the mining and processing related facilities and equipment. In addition, costs are affected by the price and availability of input commodities, such as fuel, electricity, labor, chemical reagents, explosives, steel, concrete and mining and processing related equipment and facilities. Commodity costs are, at times, subject to volatile price movements, including increases that could make production at certain operations less profitable. Further, changes in laws and regulations can affect commodity prices, uses, and transport. Reported costs may also be affected by changes in accounting standards. A material increase in costs at any significant location could have a significant effect on our profitability and operating cash flow.

Our operational costs, including, without limitation, labor costs, can be impacted by inflation. Certain of our operations are located in countries that have in the past experienced high rates of inflation, such as in Argentina, Suriname, and Ghana. It is possible that in the future, high inflation in the countries in which we operate may result in an increase in operational costs in local currencies (without a concurrent devaluation of the local currency of operations against the dollar or an increase in the dollar price of gold, copper, silver, lead or zinc). A material increase in costs at any significant location could have a significant effect on our profitability and operating cash flow.

We could have significant increases in capital and operating costs over the next several years in connection with new projects, costs related to closure reclamation activities, and in the sustaining and/or expansion of existing mining and processing operations. Costs associated with capital expenditures may increase in the future as a result of factors beyond our control. Increased capital expenditures may have an adverse effect on the profitability of and cash flow generated from existing operations, as well as the economic returns anticipated from new projects. Significantly higher and sustained increases in operational costs or capital expenditures could result in the deferral or closure of projects and mines in the event that costs become prohibitive.

Mine closure, reclamation and remediation costs for environmental liabilities may exceed the provisions we have made.

Natural resource extractive companies are required to close their operations and rehabilitate the lands that they mine in accordance with a variety of environmental laws and regulations. Estimates of the total ultimate closure and rehabilitation costs for gold, silver, copper, zinc and lead mining operations are significant and based principally on current legal, community and regulatory requirements and mine closure plans that may change materially.

Additionally, we may be held responsible for the costs of addressing contamination at the site of current or former activities or at third party sites or be held liable to third parties for exposure to hazardous substances should those be identified in the future. Under the U.S. Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA") and its state law equivalents, current or former owners of properties may be held jointly and severally liable for the costs of site cleanup or required to undertake remedial actions in response to unpermitted releases of hazardous substances at such property, in addition to, among other potential consequences, liability to governmental entities for the cost of damages to natural resources, which may be significant. These subject properties are referred to as "superfund" sites. For example, the inactive Midnite uranium mine is a superfund site subject to CERCLA. It is possible that certain of our other current or former operations, projects or exploration locations in the U.S. could be designated as a superfund site in the future, exposing us to potential liability under CERCLA.

The laws and regulations governing mine closure and reclamation in a particular jurisdiction are subject to review at any time and may be amended to impose additional requirements and conditions which may cause our provisions for environmental liabilities to be underestimated and could materially affect our financial position or results of operations. For a more detailed description of potential environmental liabilities, see the discussion in Environmental Matters in Note 25 to the Consolidated Financial Statements. In addition, regulators are increasingly requesting security in the form of cash collateral, credit, trust arrangements or guarantees to secure the performance of environmental obligations, which could have an adverse effect on our financial position. Any underestimated or unanticipated retirement and rehabilitation costs could materially affect our financial position, results of operations and cash flows. Environmental liabilities are accrued when they become known, or new permit conditions or limits are added, are probable and can be

reasonably estimated. Whenever a previously unrecognized remediation liability becomes known, or a previously estimated reclamation cost is increased, the amount of that liability and additional cost will be recorded at that time and could materially reduce our consolidated net income attributable to Newmont stockholders and potentially result in impairments.

For example, in early 2015 and again in June 2017, the Peruvian government agency responsible for certain environmental regulations, the MINAM, issued proposed modifications to water quality criteria for designated beneficial uses which apply to mining companies, including Yanacocha. These criteria modified the in-stream water quality criteria pursuant to which Yanacocha has been designing water treatment processes and infrastructure. In 2017, Yanacocha submitted a modification to its previously approved compliance achievement plan to the MINEM. In May 2022, Yanacocha submitted a proposed modification to this plan requesting an extension of time for coming into full compliance with the new regulations to 2027. In June 2023, Yanacocha received approval of its updated compliance plan from MINEM and was granted an extension to June 2026 to achieve compliance. The Company appealed this approval to the Mining Council requesting the regulatory extension until 2027, and in April 2024, MINEM approved the compliance schedule.

The Company is conducting detailed studies to better estimate water management and other closure activities that will ensure water quality and quantity discharge requirements, including the modifications promulgated by MINAM, as referenced above, will be met. This also includes performing a comprehensive update to the Yanacocha reclamation plan to address changes in closure activities and estimated closure costs while preserving optionality for potential future projects at Yanacocha. These ongoing studies, which will extend beyond the current year, continue to evaluate and revise assumptions and estimated costs of changes to the reclamation plan. While certain estimated costs remain subject to revision, the Company's asset retirement obligation includes construction and operating costs for two new water treatment plants and initial consideration of known risks (including the associated risk that these water treatment estimates could change in the future as more work is completed). The ultimate construction costs of the two water treatment plants remain uncertain as ongoing study work and assessment of opportunities that incorporates the latest design considerations remain in progress. These and other risks and contingencies that are the subject of ongoing studies could result in future material increases to the reclamation obligation at Yanacocha, including, but not limited to, a comprehensive review of our tailings storage facility management, review of Yanacocha's water balance and storm water management system and review of post-closure management costs. The ongoing Yanacocha closure studies are expected to be progressed in 2025 and continue in the future. Future material increases or decreases to the asset retirement obligation could occur as additional analyses are completed and further refinements to water quality and volume modeling are completed. Additionally, revisions to the Yanacocha reclamation plan may change in connection with the Company's ultimate submission and review of the plan with Peruvian regulators. Refer to Notes 6 and 25 to our Consolidated Financial Statements for information regarding reclamation and remediation, and Note 1 to our Consolidated Financial Statements regarding the Company's interest in Yanacocha.

Damage to our reputation may result in decreased investor confidence, challenges in maintaining positive community relations and can pose additional obstacles to our ability to develop our projects, which may result in a material adverse impact on our business, financial position, results of operations and growth prospects.

Damage to our reputation can be the result of the actual or perceived occurrence of a variety of events and circumstances, and could result in negative publicity (for example, with respect to handling of environmental, tailings and tailings failures, employee, safety and security matters, dealings with local community organizations or individuals, community commitments, handling of cultural sites or resources, and various other matters).

In recent years we have provided greater transparency on environmental, social and governance performance in response to stakeholder engagement and requests, and provided supplemental disclosures in our Annual Sustainability Report and other sustainability reports on our website in connection with stakeholder concerns and issues. Such increased transparency may result in greater scrutiny and impact how the Company is perceived.

Our Code of Conduct (the "Code") forms the foundation of our internal governance structure as well as our commitment to responsible mining. We encourage employees and others to promptly report incidents of possible violations of the Code and/or our global policies and standards, including without limitation in the areas of business integrity, social and environmental, community relations and human rights. Employees and non-employees, including suppliers and community members, can anonymously report concerns via our third-party-administered helpline. Each mine site also has a complaints and grievances register to record matters raised by local stakeholders. When necessary, we use independent mechanisms agreed to by the complainants, such as a local leader or committee, to facilitate resolution of such matters before they require public or legal intervention. However, we are not always able to resolve these matters before they are raised publicly or in legal or regulatory proceedings and in the future we may not be able to meet the growing demands of stakeholders through these mechanisms. Such matters once publicized may negatively impact our reputation and may have a material adverse effect on our business, financial position and results of operations.

The growing use of social media to generate, publish and discuss community news and issues and to connect with others has made it significantly easier, among other things, for individuals and groups to share their opinions of us and our activities, whether true or not. We do not have direct control over how we are perceived by others and any resulting loss of reputation could have a material adverse effect on our business, financial position and results of operations.

We are dependent upon information technology and operational technology systems, which are subject to disruption, damage, failure or cybersecurity attacks and risks associated with implementation, upgrade, operation and integration.

Our business operations rely heavily on technology platforms and systems to manage and optimize our globally diverse mining assets. These systems are critical to ensuring safety, operational efficiency, cost management, and meeting environmental, social, and governance (ESG) objectives. However, the increasing sophistication of cybersecurity threats, coupled with the adoption of emerging technologies such as artificial intelligence (AI), automation, and cloud-based platforms, poses important risks to our operations, financial performance, and reputation.

Our systems, as well as those of our third-party service providers, vendors, and partners, face a wide range of cybersecurity threats, including: Ransomware, malware, and phishing schemes targeting critical systems and sensitive data; unauthorized access and breaches affecting intellectual property, financial information, and operational data; vulnerabilities introduced through supply chain dependencies and third-party security weaknesses; human error, design flaws, and system misconfigurations.

The adoption of new technologies and the adoption of remote and flexible work arrangements enhances our operational capabilities but introduces additional risks. AI, for example, is increasingly leveraged by Newmont for decision-making, mineral extraction optimization, and autonomous operations. While AI has the potential to improve efficiency and safety, it also presents unique vulnerabilities, including algorithmic biases that could lead to inaccurate decisions or unintended outcomes; data integrity risks, such as manipulation or corruption of datasets used to train AI systems; unauthorized access or exploitation of AI-powered systems, potentially compromising operations or sensitive data.

Additionally, the increased interconnectivity of automated and cloud-based systems and increase of our remote workforce expands our cyber-attack surface, requiring heightened vigilance and advanced security measures. These risks are further compounded for our operations in countries with higher geopolitical risk.

The Newmont cybersecurity program is designed to protect our technology platforms and address risks associated with the implementation of emerging technologies. While these efforts are designed to align with industry best practices, no system can eliminate all risks, especially given the pace of technological advancement and the evolving nature and increased frequency of cyber threats. In addition, we do not carry specific cybersecurity insurance to help mitigate such costs due to increased premiums and limited market availability.

Therefore, a successful cyberattack or other cybersecurity incident could result in production and operational downtimes, data corruption, and unauthorized disclosure of sensitive information. For example, in 2020, we detected a cyberattack on our systems. Although we were able to respond quickly to stop the continued spread of the threat, it took significant time and resources to fully identify the scope of the attack and to recover our systems and data. The cost of responding to and remediating such event was immaterial. Although the 2020 attempts and other cyber incidents to date have not resulted in any material breaches, disruptions, or loss of business-critical information, our systems and procedures for preparing and protecting against such attempts and mitigating such risks may prove to be insufficient against future attacks. These events may subject us to significant expenses, remediation costs, disputes, financial losses, regulatory actions or investigations, litigation, reputational harm, and delays in the deployment of critical technologies, that could result in damages, material fines and penalties, and harm to our reputation, any of which could have a significant effect on our financial condition, results of operations, liquidity, and cash flows. The risks associated with the implementation of emerging technologies, if not effectively mitigated, could undermine the benefits of these advancements and impact our competitive position.

In addition, we are subject to various legislation, regulations, directives and guidelines from federal, state, local and foreign agencies, that are intended to strengthen cybersecurity measures required for information and operational technology, and that apply to the collection, use, retention, protection, disclosure, transfer and other processing of personal information. Failure to comply with any of applicable legal requirements could result in enforcement action against us, including fines, which could harm our reputation and have a significant effect on our financial condition, results of operations, liquidity, and cash flows.

To the extent we hold or acquire interests in any joint ventures or enter into any joint ventures, our interest in these properties is subject to the risks normally associated with the conduct of joint ventures.

To the extent we hold or acquire interests in any joint ventures or enter into any joint ventures in the future, the existence or occurrence of one or more of the following circumstances and events could have a material adverse impact on our profitability or the viability of our interests held through joint ventures, which could have a material adverse impact on our future cash flows, earnings, results of operations and financial condition:

- inconsistent economic, political or business interests or goals between partners or disagreements with partners on strategy for the most efficient development or operation of mines;
- inability to control certain strategic decisions made in respect of properties;
- exercise of majority rights by our partners so as to take actions for which we may not believe to be in the joint venture's best interests, including but not limited to decisions related to day to day operations, labor relations, litigation, government relations, political contributions, community relations, project approval and project funding mechanisms;

- inability of partners to meet their financial and other obligations to the joint venture or third parties;
- disputes between partners regarding management, funding or other decisions related to the joint venture; and
- activities conducted by partners outside the joint venture may lead to reputational or regulatory consequences that negatively affect the performance or reputation of the joint venture due to their association.

To the extent that we are not the operator of joint venture properties, such that we will be unable to control the activities of the operator, the success of such operations will be beyond our control. In many cases we will be bound by the decisions made by the operator in the operation of such property, and will rely on the operator to manage the property and to provide accurate information related to such property. We can provide no assurance that all decisions of operators of properties we do not control will achieve the expected results.

For example, our joint ventures, including the joint venture that combined our and Barrick Gold Corporation's ("Barrick") respective Nevada operations, forming NGM, pursuant to the operating agreement entered into on July 1, 2019 between Barrick, Newmont and their wholly-owned subsidiaries party thereto (the "Nevada JV Agreement"), may not be as beneficial to us as expected, whether due to the above-described risks, unfavorable global economic conditions, increases in construction costs, integration challenges, political risks, labor disputes or other factors. Pursuant to the terms of the Nevada JV Agreement, we hold a 38.5 percent economic interest and Barrick holds a 61.5 percent economic interest in NGM. Barrick operates NGM with overall management responsibility and is subject to the supervision and direction of NGM's Board of Managers, which is comprised of three managers appointed by Barrick and two managers appointed by Newmont. Outside of certain prescribed matters, decisions of the Board of Managers will be determined by majority vote, with the managers appointed by each company having voting power in proportion to such company's economic interests in NGM. Because we beneficially own less than a majority of the ownership and governance interests in NGM, we have limited control of NGM's operations, and we depend on Barrick to operate NGM. In the event that Barrick has interests, objectives and incentives with respect to NGM that differ from our own, there can be no assurance that we will be able to resolve such disagreement in our favor. Any such disagreement could have a material adverse effect on our interest in NGM, the business of NGM or the portion of our growth strategy related to NGM. Additionally, to the extent NGM is subject to liabilities or litigation, we would be responsible for a proportional share of certain liabilities and/or NGM's operations could be impacted, which could have an adverse impact on the Company's cash flows, earnings, results of operations and financial position.

Newmont is also exposed to non-managed investments related to its joint venture interest in Pueblo Viejo mine (40.0% owned) and Norte Abierto (50% owned). We also hold a 32.0% equity interest in Lundin Gold, a Canadian mine development and operating company, operating the Fruta del Norte gold mine in Ecuador, in addition to a variety of exploration and project joint ventures.

Additionally, the Company is subject to certain funding requirements in connection with its joint ventures. Joint venture funding requirements, as well as the ability of partners to meet their financial and other obligations, may result in increases to our costs and required capital expenditures and possible delays in joint venture activities. Refer to Note 15 to the Consolidated Financial Statements for more information including with respect to loan agreements with Pueblo Viejo.

Our operations and business have in the past been affected by the COVID-19 pandemic, and may be materially and adversely impacted in the future by pandemics, epidemics and other health emergencies.

The Company faces risks related to health epidemics and other outbreaks of communicable diseases, which could significantly disrupt operations and may materially and adversely affect its business and financial conditions. For example, the global COVID-19 pandemic significantly impacted our operations in 2020 and 2021, and to a lesser extent in 2022. In order to protect nearby communities and align with government travel restrictions or health considerations, certain of Newmont's operations were temporarily put into care and maintenance resulting in a temporary decrease in production at these sites in 2020 and 2021. Additionally, the majority of our sites experienced pandemic-related absenteeism in 2021 and early 2022. In addition, the Company incurred costs during 2020 and 2021 as a result of actions taken to protect against the impact of the COVID-19 pandemic and comply with local mandates, and could be required to incur such costs in the future. Reductions in our operational activities due to COVID-19, or another pandemic, epidemic or health outbreak, could result in additional sites being placed into care and maintenance for extended periods of time and/or have a material adverse impact on our business, or financial condition, results of operations and cash flows. If the majority of our sites are placed into care and maintenance, this could significantly reduce our cash flow and impact our ability to meet certain covenants related to our revolving credit facility and borrowing capacity.

Financial Risk

Increased exposure to foreign exchange fluctuations and capital controls may adversely affect Newmont's costs, earnings and the value of some of our assets.

Our reporting currency is the U.S. dollar and the majority of our earnings and cash flows are denominated in U.S. dollars. We conduct certain business in currencies other than the U.S. dollar. A portion of our operating expenses are incurred in local currencies. The appreciation of those local currencies against the U.S. dollar increases our costs of production in U.S. dollar terms at mines located outside the United States. The foreign currencies that primarily affect our results of operations are the Australian Dollar and the

Canadian Dollar. Our consolidated earnings and cash flows may also be impacted by movements in the exchange rates. Change in the value of the currencies of the Australian Dollar, Canadian Dollar, the Mexican Peso, the Argentine Peso, the Ghana Cedi, the Papua New Guinea Kina, the Chilean Peso, the Surinamese Dollar or the Fijian Dollar versus the U.S. dollar could negatively impact our earnings. For information concerning the sensitivity of our *Costs applicable to sales* to changes in foreign currency exchange rates and more information our exposure to foreign exchange rate fluctuations, see Foreign Currency Exchange Rates section in Part II, Item 7, Management's Discussion and Analysis of Consolidated Financial Condition and Results of Operations.

From time to time, countries in which we operate adopt measures to restrict the availability of the local currency or the repatriation of capital across borders. These measures are imposed by governments or central banks, in some cases during times of economic instability, to prevent the removal of capital or the sudden devaluation of local currencies or to maintain in-country foreign currency reserves. In addition, many emerging market countries require consents or reporting processes before local currency earnings can be converted into U.S. dollars or other currencies and/or such earnings can be repatriated or otherwise transferred outside of the operating jurisdiction. These measures may have a number of negative effects on Newmont, reducing the immediately available capital that we could otherwise deploy for investment opportunities or the payment of expenses. Measures that restrict the availability of the local currency or impose a requirement to operate in the local currency may create other practical difficulties for Newmont. For example, Argentina has been considered a hyperinflationary environment with a cumulative inflation rate of over 100% over the last three years. In recent years, Argentina's central bank enacted a number of foreign currency controls in an effort to stabilize the local currency. These restrictions directly impact the timing of Cerro Negro's ability to remit cash from gold sales and pay interest and principal portions of intercompany debt to the Company. In addition, PNG is currently experiencing a backlog by foreign and domestic companies and governmental agencies to convert Kina into foreign currencies. The Bank of PNG implements foreign exchange controls and manages the exchange rate of the kina against the U.S. dollar. There is a risk that further changes in foreign exchange controls may adversely impact future revenue and profitability. For more information, see Results of Consolidated Operations and Foreign Currency Exchange Rates sections in Item 7, Management's Discussion and Analysis of Consolidated Financial Condition and Results of Operations. See also risk factors under the headings "*Our operations in Argentina are susceptible to risk as a result of economic and political instability in Argentina and labor unrest*", "*Our operations at Ahafo and Akyem in Ghana are subject to political, economic, security and other risks*" and "*Our Merian operation in Suriname is subject to political, security and economic risks*", "*Our operations at Lihir and project at Wafi-Golpu in PNG are subject to political and regulatory risks and other uncertainties*" and "*Our operations and projects Canada are subject to legal and regulatory risks and other uncertainties in connection with claims and challenges by Indigenous groups*" below.

Future funding requirements may affect our business, our ability to pursue new business opportunities, invest in existing and new projects, pay cash dividends or engage in share repurchase transactions.

Potential future investments, including projects in the Company's project pipeline, acquisitions and other investments, will require significant funds for capital expenditures. Depending on gold, copper, silver, lead and zinc prices, our operating cash flow may not be sufficient to meet all of these expenditures, or result in strategic reprioritization of the project portfolio, depending on the timing of development of these and other projects. As a result, new sources of capital may be needed to meet the funding requirements of these investments, fund our ongoing business activities, and fund construction and operation of potential future projects. Our ability to raise and service significant new sources of capital will be a function of macroeconomic conditions, future gold, copper, silver, lead and zinc prices as well as our operational performance, current cash flow and debt position, among other factors. We may determine that it may be necessary or preferable to issue additional equity or other securities, defer projects or sell assets. For example, in February 2024 Newmont announced its intent to divest non-core assets, including six operations and two projects from its Australian, Ghanaian, and North American business units. At the end of 2024 the sale of Telfer operation and Newmont's 70% interest in the Haviron project closed and definitive agreements were in place to divest four other operations; Akyem, Musselwhite, Éléonore and CC&V. In addition, proceeds were also received from the completed sale of investments, including the sale of the Lundin Gold stream credit facility and offtake agreement, and the monetization of Newmont's Batu Hijau contingent payments.

U.S. and global markets have, from time to time, experienced significant dislocations and liquidity disruptions. For example, the COVID-19 pandemic and events related to the recent and on-going conflicts (such as sanctions in Ukraine, Russia and/or Belarus), have in the past, and may in the future cause volatility and pricing in the capital markets. Additional financing may not be commercially available when needed or, if available, the terms of such financing may not be favorable to us and, if raised by offering equity securities, any additional financing may involve substantial dilution to existing stockholders. In the event of lower gold, copper, silver, lead or zinc prices, unanticipated operating or financial challenges, or new funding limitations, our ability to pursue new business opportunities, invest in existing and new projects, fund our ongoing business activities, retire or service all outstanding debt, fund share repurchase programs and transactions and pay dividends could be significantly constrained.

The Company's repurchase program may be discontinued at any time, and the program does not obligate the Company to acquire any specific number of shares of its common stock or to repurchase the full authorized amount during the authorization period. Consequently, the Board of Directors may revise or terminate such share repurchase authorization in the future. See also the risk factor under the heading "*Holders of our common stock may not receive dividends.*" In addition, our joint venture partners may not have sufficient funds or borrowing ability in order to make their capital commitments. In the case that our partners do not make their

economic commitments, the Company may be prevented from pursuing certain development opportunities or may assume additional financial obligations, which may require new sources of capital.

Our long-lived assets and goodwill could become impaired, which could have a material non-cash adverse effect on our results of operations.

We review our operations for events and circumstances that could indicate that the carrying value of our long-lived assets may not be recoverable. If indicators of impairment are determined to exist at our mine operations, we review the recoverability of the carrying value of long-lived assets by estimating the future undiscounted cash flows expected to result from the use and eventual disposition of the asset. We also review our goodwill for impairment annually and when events or changes in circumstances indicate that the carrying value of a reporting unit exceeds its fair value. Management makes multiple assumptions in estimating future cash flows, which include production levels based on life of mine plans, future costs of production, estimates of future production levels based on value beyond proven and probable reserves at our operations, prices of metals, the historical experience of our operations and other factors. There are numerous uncertainties inherent in estimating production levels of gold, copper, silver, lead and zinc and the costs to mine recoverable reserves, including many factors beyond our control that could cause actual results to differ materially from expected financial and operating results or result in future impairment charges. We may be required to recognize material non-cash charges relating to impairments of long-lived assets and/or goodwill in the future if actual results differ materially from management's estimates, which include metal prices, our ability to reduce or control production costs or capital costs through strategic mine optimization initiatives, increased costs or decreased production due to regulatory issues or if we do not realize the mineable reserves, resources or exploration potential at our mining properties. Additions to asset retirement costs could result in impairment charges.

We recorded substantial goodwill, primarily as the result of our acquisition of Newcrest in 2023. We accounted for the acquisition of Newcrest using the acquisition method of accounting, which requires that purchase price is allocated to the underlying tangible and intangible assets acquired and liabilities assumed of Newcrest based on their respective fair market values. Any excess purchase price is allocated to goodwill. Our balance sheet reflects additions to the carrying amount of goodwill recognized in connection with the Newcrest transaction.

The Company continues to evaluate strategic priorities and deployment of capital to projects in the pipeline. A decision to reprioritize, sell or abandon a development project could result in a future impairment charge. For example, in response to challenging market conditions, which included inflationary pressures and supply chain disruptions, in 2023 the Company announced the deferral for at least two years of the full-funds investment decision for the Yanacocha Sulfides project in Peru. With the delay of the Yanacocha Sulfides project, management will focus on optimizing its allocation of funds to current operations and other capital commitments, while also assessing execution options and project plans options, up to and including transitioning Yanacocha operations into full closure. The Company also periodically updates the economic model for its Conga project to understand changes to the estimated capital costs, cash flows, and economic returns from the project. Certain decisions or changes in circumstances could result in determinations that carrying value is not recoverable and could result in impairment. See Part II, Item 7 under the heading "*Critical Accounting Estimates – Carrying value of long-lived assets and Carrying value of Conga*" for additional information.

If an impairment charge is incurred, such charges are not reversible at a later date even when favorable modifications to our proven and probable reserves and measured, indicated and inferred resources, favorable revisions to environmental obligations, favorable changes in legislation and/or our political or economic environment, or other favorable events occur. As a result of these uncertainties, our operating results may be significantly impacted from both the impairment and the underlying trends in the business that triggered the impairment, and actual results may be less favorable than estimated returns and initial financial outlook. For additional information regarding goodwill, refer to Note 19 to our Consolidated Financial Statements.

Our ability to recognize the benefits of deferred tax assets is dependent on future cash flows and taxable income.

We recognize the expected future tax benefit from deferred tax assets when the tax benefit is considered to be more likely than not of being realized, otherwise, a valuation allowance is applied against deferred tax assets. Assessing the recoverability of deferred tax assets requires management to make significant estimates related to expectations of future taxable income. Estimates of future taxable income are based on historical results of operations, forecasted cash flows from operations, and the application of existing tax laws in each jurisdiction. To the extent that future cash flows and taxable income differ significantly from estimates, our ability to realize the deferred tax assets could be impacted. In the future, our estimates could change requiring a valuation allowance or impairment of our deferred tax assets. Additionally, future changes in tax laws could limit our ability to obtain the future tax benefits represented by our deferred tax assets. Refer to Note 10 to our Consolidated Financial Statements under the heading "Income and Mining Taxes - Valuation of Deferred Tax Assets" and Note 2 under the heading "Summary of Significant Accounting Policies - Valuation of Deferred Tax Assets" for additional information and factors that could impact the Company's ability to realize the deferred tax assets. For additional information regarding Newmont's non-current deferred tax assets, refer to Note 10 to our Consolidated Financial Statements.

Any downgrade in the credit ratings assigned to our debt securities could increase our future borrowing costs and adversely affect the availability of new financing.

There can be no assurance that any rating currently assigned by Standard & Poor's Rating Services, Moody's Investors Service, or Fitch Ratings to Newmont will remain unchanged for any given period of time or that a rating will not be lowered if, in that rating agency's judgment, future circumstances relating to the basis of the rating so warrant. If we are unable to maintain our outstanding debt and financial ratios at levels acceptable to the credit rating agencies, or should our business prospects or financial results deteriorate, our ratings could be downgraded by the rating agencies. The Company's credit ratings have been subject to change over the years. We currently maintain a Standard & Poor's rating of "BBB+" (stable outlook). Moody's Investors Service rating of Baa1 (positive outlook), and a Fitch Ratings rating of A- (stable outlook). We cannot make assurances regarding how long these ratings will remain unchanged or regarding the outcome of the rating agencies future reviews (including following any planned or future business combinations). A downgrade by the rating agencies could adversely affect the value of our outstanding securities, our existing debt and our ability to obtain new financing on favorable terms, if at all, and increase our borrowing costs, which in turn could impair our results of operations and financial position.

Returns for investments in pension plans are uncertain.

We maintain pension plans for certain employees which provide for specified payments after retirement. The Company's qualified pension plans are funded with cash contributions in compliance with IRS rules and regulations. The Company's non-qualified and other benefit plans are currently not funded, but exist as general corporate obligations. Refer to Note 11 to our Consolidated Financial Statements under the heading "Pension and Other Benefit Plans" for additional information regarding the funding status of qualified and non-qualified plans. The Company reviews its retirement benefit programs on a regular basis and will consider market conditions and the funded status of its qualified pension plans in determining whether additional contributions are appropriate. The ability of the pension plans to provide the specified benefits depends on our funding of the plans and returns on investments made by the plans. Returns, if any, on investments are subject to fluctuations based on investment choices and market conditions. A sustained period of low returns or losses on investments could require us to fund the pension plans to a greater extent than anticipated. If future plan investment returns are not sufficient, we may be required to increase the amount of future cash contributions.

Risks Related to Our Industry

We may experience increased costs or losses resulting from the hazards and uncertainties associated with mining.

The exploration for natural resources and the development and production of mining operations are activities that involve a high level of uncertainty. These can be difficult to predict and are often affected by risks and hazards outside of our control. These factors include, but are not limited to:

- Environmental hazards, including discharge of metals, concentrates, pollutants or hazardous chemicals;
- Industrial accidents, including in connection with the operation of heavy mobile equipment, milling equipment and/or conveyor systems and accidents associated with the preparation and ignition of large-scale blasting operations, milling and processing;
- Accidents in connection with transportation, including transportation of chemicals, explosives or other materials, transportation of large mining equipment and transportation of employees and business partners to and from sites;
- Social, community or labor force disputes resulting in work stoppages or shipping delays, such as at Peñasquito, Cerro Negro, Merian, Akyem and Lihir, or related loss of social acceptance of community support;
- Changes and/or increasingly stringent legal and regulatory requirements;
- Delays in permitting due to reduced resources and capacity for review and formulation of permits at regulatory agencies;
- Security incidents, including activities of illegal or artisanal miners, gold bullion or concentrate theft, including in transport, and corruption and fraud;
- Shortages in materials or equipment and energy and electrical power supply interruptions or rationing;
- Failure of unproven or evolving technologies or loss of information integrity or data;
- Unexpected geological formations or conditions (whether in mineral or gaseous form);
- Metallurgical conditions and gold, copper, silver, lead, zinc and other metal recovery, including unexpected decline of ore grade;
- Unanticipated changes in inventory levels at heap-leach operations;
- Ground and surface water conditions;
- Fall-of-ground accidents in underground operations;
- Failure of mining pit slopes, tailings embankments, and other tailing depositions, or water storage dams;

- Seismic activity;
- Surface or underground fires or floods, inundation or inrush of water and other materials; and
- Other natural phenomena, such as lightning, cyclonic or tropical storms, drought, avalanches, landslides, wildfires, tsunami, floods, or other inclement weather conditions, including those impacting operations or the ability to access and supply sites.

The occurrence of one or more of these events in connection with our exploration activities, development and production and closure of mining operations may result in the death of, or personal injury to, our employees, other personnel or third parties, the loss of mining equipment and infrastructure, work stoppages, damage to or destruction of mineral properties or production facilities, monetary losses, deferral or unanticipated fluctuations in production, environmental damage and potential legal liabilities, all of which may adversely affect our reputation, business, prospects, results of operations and financial position.

Mining operations involve a high degree of risk, including hazards related to the use of explosives and hazardous chemicals and critical equipment failure.

Our operations are subject to risks associated with the transportation, storage, handling and use of explosives and hazardous chemicals. These include unplanned detonation of explosives and catastrophic release of hazardous chemicals (for example, due to vessel rupture resulting in an explosion or toxic gas release). Critical equipment related risks that apply to various Newmont sites include for example, mill failure arising from catastrophic failure of a component, or unavailability of mine haul fleet. Other critical equipment related risks may be site specific. For example, asset integrity at Lihir may be impacted by the proximity of the mine to a corrosive marine environment. The occurrence of such catastrophic events may result in work stoppages, damage to or destruction of mines and other producing facilities, damage to or loss of life and property, environmental damage and possible legal liability for any or all damage or loss and may adversely affect the Company's operating results and financial condition.

We rely on our supply chain operations to procure goods and services to support our operations and projects, and competition with other natural resource companies, and shortage of critical parts, services and equipment may adversely affect our operations and development projects.

Production continuity and cost profile can be impacted by risks associated with the management and operation of the Company's inbound global supply chain (including risks associated with the inventory management of critical equipment, spares and consumables). We rely on our global supply chain to procure goods and services from suppliers and contractors to support our operations and projects. We are exposed to material availability, disruption and performance risks across our supply chain, including lack of suitable suppliers or contractors, cost increases, impacts of pandemics and epidemics on the supply chain, transportation and logistics issues including delays in delivery, disruption to trade flows due to geopolitical tensions and/or changes in legislation, performance of suppliers and contractors to contractual terms, and damage to our reputation caused by actions of our suppliers or contractors. In addition, our ability to competitively source goods and services may be affected by local content procurement commitments in the jurisdictions in which we operate. See the risk factors "We rely on contractors to conduct a significant portion of our operations and construction projects" and "Our operations and projects may be adversely affected by rising energy prices or energy shortages" below for further information.

Inbound supply chain disruptions could lead to mine site production curtailment or stoppage if a critical material or labor input is unavailable. This could have a material adverse impact to our financial condition depending on the duration of the curtailment or stoppage. The Company is also exposed to outbound supply chain risk, particularly fluctuating transportation charges, delays in delivery of shipments, theft, terrorism, geopolitical tensions and border closures and adverse weather conditions.

In addition, we compete with other natural resource companies for specialized equipment and supplies necessary for exploration and development, as well as for rights to mine properties containing gold, copper, silver, lead, zinc, and other minerals. The mining industry has been impacted, from time to time, by increased demand for critical resources such as input commodities, drilling equipment, trucks, shovels and tires. These shortages have, at times, impacted the efficiency of our operations, and resulted in cost increases and delays in construction of projects; thereby impacting operating costs, capital expenditures and production and construction schedules. We may be unable to obtain the services of skilled personnel and contractors or specialized equipment or supplies, or to acquire additional rights to mine properties, which could have an adverse effect on our competitive position or adversely impact our results of operations.

We may be unable to obtain or retain necessary permits and land or mining tenure, which could adversely affect our operations and projects.

Our mining and processing operations and development and exploration activities are subject to extensive permitting requirements. The requirements to obtain and/or achieve or maintain full compliance with such permits can be costly and involve extended timelines. While we strive to obtain and comply with all permits required of us, there can be no assurance that we will obtain all such permits and/or achieve or maintain full compliance with such permits at all times. Previously obtained permits may be suspended or revoked for a number of reasons, including through government or court action. New or amended permits may also be required to continue existing activities, as new laws come into effect or regulators change their application of laws. Failure to obtain and/or comply with required permits can have serious consequences, including damage to our reputation; cessation of the

development of a project; increased costs of development or production and litigation or regulatory action, any of which could materially adversely affect our business, results of operations or financial condition.

Our ability to obtain the required permits and approvals to explore for, develop and operate mines and to successfully operate near communities in the jurisdictions in which we operate depends in part on our ability to develop, operate and close mines in a manner that is consistent with the creation of social and economic benefits in the surrounding communities, which may or may not be required by law. Our ability to obtain permits and approvals and to operate near certain communities may be adversely impacted by real or perceived detrimental events associated with our activities or those of other mining companies affecting the environment, health and safety of communities in which we operate. Key permits and approvals may be revoked or suspended or may be adjusted in a manner that adversely affects our operations, including our ability to explore or develop properties, commence production or continue operations. Permit review and approval could be delayed, adversely impacting project implementation due to delays in review and development of permits from limited resources at the regulatory agencies.

Many of our mining and processing operations, including tailings storage, project expansions, and exploration and development activities require mineral, mining and/or surface land tenure properties that are leased, granted to, or otherwise acquired by the Company for specified periods of time. Securing, maintaining, extending, and renewing the Company's rights, titles, or interests ("Legal Title") in and to these land tenures can be costly, subject to political, regulatory, and social risks, and no assurance can be provided that all required leases or other types of land tenure will be granted, maintained, extended, or renewed. For example, additional tailings capacity is needed to support future growth and sustainability of Boddington operations beyond 2025. Boddington's existing tailings facility is expected to reach the permitted capacity in 2026. Following advancement of the life of mine tailings study to explore options for continued tailings deposition, the Company decided to expand the existing F1/F3 Residue Disposal Area ("RDA") from an ultimate capacity of 600Mt to 750Mt to provide storage capacity to 2029, subject to permitting and other approvals. Beyond 2029 an additional tailings facility would need to be built, termed RDA2, and this facility is also subject to permitting and other approvals, including additional environmental permits. Further, the Boddington operation is primarily located on mining leases with renewal dates commencing in 2028. The lease renewal, as well as additional leases required in connection with tailings expansion, require cooperation and agreements with third parties. No assurances can be provided that such renewals and additional lease scope for further tailings capacity will be secured at similar cost, commercially reasonable terms, or at all. A failure to secure agreement on commercially reasonable terms could result in increased costs, requirements to move infrastructures, modification to future plans, including cessation of mining.

Similarly, the current capacity of the TSFs at Cadia should support operations through to the current permitted time period by exhausting capacity within the current Pit TSF ("PTSF") and by constructing a raise to the South Tailings Storage Facility ("STSF"), as has been permitted. Studies evaluating potential options to increase tailings storage capacity are underway, including additional placement of tailings on the North Tailings Storage Facility ("NTSF") and a proposal to construct an extension to the current STSF ("STSF") to provide capacity to approximately 2050. Cadia is currently approved to continue operations until 2031 and is seeking approval from the NSW Government to extend our mining operations beyond 2031. This is known as the Cadia Continued Operations Project ("CCOP"), of which the construction of an extension to the STSF is a project feature. No assurances can be provided that approvals will be secured.

Failure to obtain required land tenure can have serious consequences, including loss of Legal Title in and to mineral and/or surface properties that are owned or controlled by the Company, cessation of operations, project delays or cancellations, increased costs, and potential litigation or regulatory action. Any of these outcomes could materially and adversely affect our business, reputation, operational performance, and financial condition. See risk factors under the headings *"Our Company and the mining industry are facing continued geotechnical, geothermal and hydrogeological challenges, which could adversely impact our production and profitability,"* and *"Title to some of our properties may be insufficient, defective, or challenged"*.

Mining companies are increasingly required to consider and provide benefits to the communities and countries in which they operate in order to maintain operations.

Greater scrutiny on the private sector broadly and multi-national companies specifically, to contribute to sustainable outcomes in the places where they operate, has led to a proliferation of standards and reporting initiatives focused on environmental stewardship, social performance and transparency. Extractive industries, and mining in particular, have seen significant increases in stakeholder expectations. These businesses are increasingly required to meaningfully engage with impacted stakeholders; understand and avoid or mitigate negative impacts while optimizing economic participation and uplift opportunities associated with their operations. The expectation is for companies to create shared value for stockholders, employees, governments, local communities and host countries. Such expectations tend to be particularly focused on companies whose activities are perceived to have high socio-economic and environmental impacts. In Canada, for instance, there is increased expectation that is also increasingly supported by regulations and/or case law for Indigenous communities on whose traditional territories mineral development occurs or is impacted by mineral development to share in the economic prosperity of the mine, and for such communities to share in joint decision making with government regulators on various permitting efforts. Newmont has over many years developed and continues to evolve a robust system of ESG management that includes policies, standards, guidance, assurance, participation in international organizations focused on improved performance and outcomes for host communities and the environment. In Ghana, for instance, in response to resettlement-related complaints, Newmont worked with national and local government authorities, traditional leaders, impacted farmers/landowners and other concerned stakeholders to analyze impacts, extend programs to support vulnerable households and

provide enhanced and/or alternative livelihood support. Despite the Company's commitment to on-going engagement with communities and stakeholders, no assurances can be provided that increased stakeholder expectations will not result in adverse financial and operational impacts to the business, including, without limitation, operational disruption, increased costs, increased investment obligations, increased commitments to local and/or Indigenous communities with fiscal implications, and increased taxes and royalties payable to governments.

Illegal mining and artisanal mining occur on or adjacent to certain of our properties exposing such sites to security risks.

Artisanal, small scale and illegal miners have been active on, or adjacent to, some of Newmont's African and South American properties, including in Peru, Suriname and Ghana in recent years. For example, in Ghana in 2019, illegal miners attacked a field team of security guards employed by a security contractor, tragically resulting in a fatality. While we are working collaboratively with the artisanal miners in Suriname on a program that includes improving mining practices for improved safety, environmental and processing practices as well as alternative livelihood opportunities, this not always possible. Illegal mining, which involves trespass and occupation of exploration, development, and operating properties present significant security, safety, legal, and environmental risk, which could result in a security threat to human life, infrastructure, and equipment, and lead to the loss of legal title, possession, or use of Newmont's land tenure. The illegal miners from time to time have clashed with security staff and law enforcement personnel who have attempted to move them away from the facilities. Although, under certain circumstances, artisanal mining may be a legally sanctioned activity, artisanal mining is also associated with a number of negative impacts, including environmental degradation, poor working practices, erosion of civil society, human rights abuse and funding of conflict. The environmental, social, legal, safety and health impacts of artisanal and illegal mining are frequently attributed to formal large scale mining activity, and it is often assumed that artisanally-mined gold is channeled through large-scale mining operators, even though artisanal and large-scale miners normally have separate and distinct supply chains. These misconceptions impact negatively on the reputation of the industry. The activities of the illegal miners could cause damage to Newmont's properties or result in inappropriate or unlawful use of force for which Newmont could potentially be held responsible. The presence of illegal miners could lead to exploration and project delays and disputes regarding the development or operation of commercial gold deposits. Illegal mining could also result in lost gold production and reserves, mine and development stoppages, and have a material adverse effect on financial condition or results of operations or project development. Finally, it is difficult to separate potential or actual environmental impacts from Newmont's activities from those of artisanal miners who have illegally accessed and are operating on our land tenure. This can cause both reputational and compliance challenges.

Civil disturbances and criminal activities can disrupt business and expose the Company to liability.

Civil disturbances and criminal activities such as trespass, illegal mining, sabotage, theft, blockades, organized crime and vandalism may cause disruptions and could result in the suspension of operations, delays to project development and negative impacts on exploration activities at certain sites. Incidents of such activities have occasionally led to conflict with security personnel and/or police, which in some cases resulted in serious injuries or death including in Ghana, Peru, Mexico, PNG and Suriname in recent years. Additionally, some areas in which we conduct operations, develop projects and exploration activities are affected by civil unrest such as in PNG and Ecuador in early 2024, and persistent violence and organized crime involving significant drug cartels, such as in Mexico.

Although security measures have been implemented by the Company to protect employees, community members, property and assets, such measures will not guarantee that such civil disturbances and criminal activities will not continue to occur in the future, or result in harm to employees, community members or trespassers, decrease operational efficiency or construction delays, increase community tensions or result in liabilities or reputational harm to Newmont. Security incidents, in the future, may have a material adverse effect on our operations, development projects, exploration and reclamation activities, especially if criminal activity and violence escalate. Such incidents may halt or delay production, increase operating costs; result in harm to employees, contractors, visitors or community members; decrease operational efficiency due to employee absenteeism and other factors; increase community tensions or otherwise adversely affect our ability to conduct business. The manner in which the Company's personnel, national police or other security forces respond to civil disturbances and criminal activities can give rise to additional risks where those responses are not conducted in a manner consistent with international and Newmont standards relating to the use of force and respect for human rights. Newmont takes seriously our obligation to respect and promote human rights, is a signatory to and active participant in the Voluntary Principles on Security and Human Rights, and has adopted a Sustainability and Stakeholder Engagement Policy and Human Rights Standard in-line with the UN Guiding Principles on Business and Human Rights. Nonetheless, although the Company has implemented a number of significant measures and safeguards which are intended to ensure that personnel understand and uphold these standards, the implementation of these measures will not guarantee that personnel, national police or other security forces will uphold these standards in every instance. The evolving expectations related to human rights, human rights defenders, Indigenous rights, and environmental protections may result in opposition to our current and future operations, the development of new projects and mines, and exploration activities. Such opposition may take the form of legal or administrative proceedings or manifestations such as protests, roadblocks or other forms of public expression against our activities, and may have a negative impact on our local or global reputation and operations. Opposition by community and activist groups to our operations may require modification of, or preclude the operation or development of, our projects and mines or may require us to enter into agreements with such groups or local governments with respect to our projects and mines or exploration activities, in some cases, causing increased costs and significant delays to the advancement of our projects. For example, in Peru, our Conga project faced opposition from anti-mining activists, after which we suspended construction on the project's mining facilities and eventually reclassified Conga's reserves to resource as the result of certain operating and construction permits expiring at the end of 2015. The failure to conduct operations in accordance with Company

standards can result in harm to employees, community members or trespassers, increase community tensions, reputational harm to Newmont or result in criminal and/or civil liability and/or financial damages or penalties.

Our operations and projects face substantial regulation of health and safety.

Our operations are subject to extensive and complex laws and regulations governing worker health and safety across our operating regions and our failure to comply with applicable legal requirements can result in substantial penalties. Future changes in applicable laws, regulations, permits and approvals or changes in their enforcement or regulatory interpretation could substantially increase costs to achieve compliance, lead to the revocation of existing or future exploration or mining rights or otherwise have an adverse impact on our results of operations and financial position.

Our mines are inspected on a regular basis by government regulators who may issue citations and orders when they believe a violation has occurred under local mining regulations. If inspections result in an alleged violation, we may be subject to fines, penalties or sanctions and our mining operations could be subject to temporary or extended closures.

In addition to potential government restrictions and regulatory fines, penalties or sanctions, our ability to operate (including the effect of any impact on our workforce) and thus, our results of operations and our financial position (including because of potential related fines and sanctions), could be adversely affected by accidents, injuries, fatalities or events detrimental (or perceived to be detrimental) to the health and safety of our employees, the environment or the communities in which we operate.

Our operations and projects are subject to extensive environmental laws and regulations.

Our exploration, development, mining and processing operations, and closed facilities are subject to extensive laws and regulations governing land use and the protection of the environment, which generally apply to air and water, protection of endangered, protected or other specified species, hazardous and non-hazardous waste management and reclamation. Many of the countries in which we operate have laws and regulations related to water (quality and quantity), nature and greenhouse gas ("GHG") emissions which are becoming increasingly more stringent. We have made, and expect to make in the future, significant expenditures to comply with such laws and regulations. Compliance with these laws and regulations imposes substantial costs and burdens, and can cause delays in obtaining, or a failure to obtain or renew, or cancellation of, government permits and approvals which may adversely impact our operations and closure processes. Increased global attention or regulation on consumption of shared resources and use products or development of waste that have the potential to impact human health and the environment could similarly have an adverse impact on our results of operations and financial position due to increased compliance and input costs. Specific examples where we face such risks include:

Waste Rock and Tailings Management

Our gold and copper mining and ore refining/metals extraction processes generate waste by-products such as waste rock (managed in waste rock dumps or, in the case of Lihir, harbor waste rock platforms and permitted barge dumping locations) and tailings (managed by the use of tailings storage facilities, lacustrine deposition in the case of Brucejack or deep sea tailings placement in the case of Lihir and as proposed at Wafi-Golpu). Tailings storage facilities are constructed progressively throughout the life of the mine to support increasing capacity requirements. If there is a failure in the integrity of a tailings storage facility, there is a risk that tailings or large volumes of water and/or potentially contaminating materials may be released and cause material harm to human health and/or the environment downstream of the facility. Such an occurrence could severely damage our reputation and materially adversely impact our operating results and financial condition. It may also subject us to civil and/or criminal action, penalties and claims from environmental and planning regulators and/or affected third parties, and may lead to the suspension or disruption of our operations and projects. For example, in December 2023 at our now divested Telfer operation in Western Australia, cracking and sinkholes were detected on an internal embankment of the site's TSF. Upon detection, the Company suspended its processing operations and a prohibition notice limiting the use of the facility was issued by the local regulator, which was lifted in September 2024 following completion of remediation works. See also risk factor under the heading "*Our operations and projects are dependent on the availability of sufficient water supplies and subject to water-related risk.*"

Tailings Storage Facilities and Dust Emissions at Cadia

Tailings deposition was suspended at Cadia Holdings Pty Ltd's ("Cadia Holdings") tailings storage facilities in March 2018 following an embankment slump of its Northern Tailings Storage Facility ("NTSF"). Use of the NTSF is subject to a prohibition notice issued by the NSW Resources Regulator and deposition is expected to remain suspended until repairs of the NTSF wall are completed. In December 2019, Cadia Holdings received approval from the New South Wales Department of Planning and Environment (the "NSW DPE") to fully utilize the decommissioned Cadia Hill mine pit for deposition of thickened tailings. In December 2021, the NSW DPE granted approval to increase the permitted processing capacity from 32 to 35 million tonnes of ore in a calendar year. Such approval is subject to certain conditions, including that Cadia Holdings commission and publish an independent air quality audit report that includes a description of the details and scheduling of all reasonable and feasible best practice measures that are being implemented by Cadia Holdings to minimize off-site air quality impacts of the mine.

The independent air quality audit report published by Cadia Holdings in August 2022 indicated that dust emitted from two ventilation exhaust rises which vent emissions from underground processing operations exceeded levels permitted by applicable law.

During the quarter ended June 2023, the New South Wales Environment Protection Authority ("NSW EPA") issued variations to its Environment Protection License ("EPL"), a Prevention Notice and Notices to Provide Information regarding the management of, and investigation into potential breaches relating to, dust emissions and other air pollutants from the Cadia tailings storage facilities and ventilation rises. The license variations largely formalized the actions Cadia Holdings had developed in consultation with the NSW EPA and was already undertaking across a range of measures.

Cadia Holdings received a letter from the NSW EPA in June 2023 requiring it to immediately comply with specific statutory requirements and EPL conditions. Adjustments were implemented underground, including a reduction in mining rates, modifications to the ventilation circuit and the installation of additional dust sprays and spray curtains. Additional dust collection units were subsequently installed enabling normal mining rates to be restored.

In August 2023, the NSW EPA commenced proceedings in the Land and Environment Court of NSW (the "NSW Land and Environment Court") against Cadia Holdings, alleging that air emissions from Cadia in March 2022 exceeded the standard of concentration for total solid particles permitted under applicable laws due to the use of surface exhaust fans at the mine. On September 29, 2023, Cadia Holdings entered a plea of guilty and the NSW Land and Environmental Court listed the case for a sentencing hearing on March 28, 2024. On October 13, 2023, the NSW EPA commenced additional proceedings in the NSW Land and Environment Court against Cadia Holdings, alleging two additional contraventions of applicable air emissions requirements in November 2021 and May 2023 and two contraventions related to alleged air pollution from tailings storage facilities on October 13 and 31, 2022. On November 24, 2023 Cadia Holdings entered a plea of guilty to the two additional charges relating to applicable air emissions requirements the sentencing hearing took place before the NSW Land and Environment Court on June 21, 2024. The matter has been adjourned pending the delivery of the judgment. On October 18, 2024, Cadia Holdings entered a plea of not guilty to the proceedings related to alleged air pollution from Cadia Holdings' tailings storage facilities. The proceedings have been adjourned for further directions on February 21, 2025. The NSW EPA's investigation regarding the management of air emissions from the mine is ongoing.

While no specific relief has been sought by the NSW EPA in its proceeding against Cadia Holdings before the NSW Land and Environment Court, the court can impose penalties.

Failure to maintain compliance with applicable law or Cadia Holdings' EPL may result in the NSW EPA suspending or revoking Cadia Holdings' EPL, seeking court orders or issuing additional prevention notices to modify or cease certain activities. Ongoing enforcement, and challenges in maintaining compliance, may impact Cadia Holdings' ability to secure a future expansion of its project approval to extend the life of mine from 2031 to 2055. In addition, Cadia Holdings has previously been, and may in the future be, subject to prosecutions and penalties for noncompliance with air quality requirements or the terms of its EPL, including in respect of emissions from any vent rise or emissions from the NTSF and the Southern Tailings Storage Facility ("STSF"). Operational changes required to achieve or maintain compliance, including reductions in mining rates and other limitations on mining or processing operations, or additional requirements to install costly pollution control equipment, may adversely impact our operating results and financial condition.

Environmental Sampling in the Cadia Area

In early 2023, residents living near Cadia raised concerns about potential impacts to drinking water supplies by various contaminants, including metals such as lead, nickel and copper, which they allege are related to emissions from the vent rises at Cadia, as well as periodic dust emission events at NTSF and STSF. In response to community concerns, the New South Wales Ministry of Health tested the quality of residents' kitchen tap water and reported that it was safe to drink. The NSW EPA also undertook water testing in the local area and the majority of results from the kitchen tap samples show metal concentrations below the Australian Drinking Water Guidelines values. The majority of the instances of non-compliance from both Cadia Holdings' and the NSW EPA's sampling programs showed that such instances of non-compliance were influenced by building and plumbing materials.

A particulate characterization study, which was undertaken by the Australian government's Australian Nuclear Science Technology Organisation (the "ANSTO") and commissioned by Cadia Holdings in collaboration with the local community, assessed the PM2.5 dust contribution from Cadia to the regional air shed over a two-year period and concluded that Cadia contributed only a small percentage of soil particulate matter. In fact, soil was determined to be the least significant source of air pollution over the two-year period, contributing less than 10% to the total PM2.5 mass. The ANSTO study also determined that metals of concern recently identified by the community, such as lead, nickel, selenium and chromium, occurred at very low levels in the PM2.5 fraction and did not exceed any national standard. The report is part of a comprehensive suite of independent air and water quality investigations, including with respect to sampling of drinking water sources, air quality monitoring, dispersion modelling and lead fingerprinting, that have been or are being conducted to determine the source of metals within the local airshed and to assess any health risks to the local community, if any, from air emissions from the Cadia mine site.

In 2024, some local residents reported perfluoroalkyl and polyfluoroalkyl Substances ("PFAS") and other contaminants were allegedly being detected in the river catchment surrounding Cadia. The NSW EPA conducted sampling and the results show PFAS, particularly perfluorooctane sulfonate ("PFOS") and perfluorooctanoic acid ("PFOA"), at several sites in the river catchment upstream and downstream from Cadia. The EPA will continue its sampling program in 2025.

In light of these developments at Cadia, there is a heightened level of community concern relating to the perceived impact of mining activities on the health of the community, and the condition of residential properties, located in proximity to Cadia. These

developments, including community complaints associated with our activities at Cadia could give rise to reputational harm, operational disruptions, increased regulatory scrutiny of mining activities or delays to project development.

Our operations and projects are subject to a range of risks related to transitioning the business to meet regulatory, societal and investor expectations for operating in a low-carbon economy.

Climate change and the transition to a low-carbon economy is expected to impact Newmont in a number of ways. Producing gold is an energy-intensive business, currently resulting in a significant carbon footprint. Transitioning to a low-carbon economy will require significant investment and may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, focus and jurisdiction of these changes, transition risks may pose varying levels of financial and reputational risk to the business.

A number of governments or governmental bodies have introduced or are contemplating regulatory changes in response to the potential impacts of climate change that are viewed as the result of emissions from the combustion of carbon-based fuels. At the 21st Conference of the Parties of the United Nations Framework Convention on Climate Change ("UNFCCC") held in Paris in 2015, the Paris Agreement was adopted which was intended to govern emission reductions beyond 2020, and subsequent UN Climate Change Conferences reaffirmed the commitments of the Paris Agreement, although in January 2025 President Trump signed an executive order to withdraw the U.S. from the Paris Agreement. Newmont supports the UNFCCC goal of limiting global warming to "well below 2°C" compared to pre-industrial levels and plans to transition its operations to meet this goal by 2030, with an aspiration of carbon neutrality by 2050. In 2020, Newmont also announced plans to invest in climate change initiatives in support of this goal, and additional material investments and capital expenditures will be required in order to meet our climate targets in the future. Inconsistent implementation or significant delay in the implementation of country-level policy is likely to increase the risk for future regulatory impacts and rapid shifts to low-carbon technologies, including renewable energy use. In addition, the UN Climate Change Conference of the Parties 2024 (COP29) reported several challenges in the transition to renewable energy, including that many countries are not transitioning as quickly as needed, which could jeopardize their ability to meet climate targets. This may cause competition for renewable resources, which may lead to increased costs and reliability issues for Newmont.

Policy and regulatory risk related to actual and proposed changes in climate- and water-related laws, regulations and taxes developed to regulate the transition to a low-carbon economy may result in increased costs for our operations, venture partners and our suppliers, including increased energy, capital equipment, environmental monitoring and reporting and other costs to comply with such regulations. Regulatory uncertainty may cause us to incur higher costs and lower economic returns than originally estimated for new development projects and operations, including closure reclamation obligations. For example, operational and capital expenses are expected to increase in order to meet renewable portfolio standard requirements from current costs over the next 10 years in Australia, Canada, Mexico and the U.S. Carbon taxes, fuel switching and the transition to cleaner purchased power and/or on-site renewable energy generation will require significant upfront capital expenditures and may also increase operating costs. As another example, the carbon tax in Canada of C\$80/tonne of CO₂ set to increase to C\$170 by 2030, is impacting operating costs at our Canadian operations. We expect the potential for similar tax increases in other jurisdictions. Additionally, we do not maintain insurance policies against such climate-related risks or taxes.

The development and deployment of technological improvements or innovations will be required to support the transition to a low-carbon economy, which could result in write-offs and early retirement of existing assets, increased costs to adopt and deploy new practices and processing including planning and design for mines, development of alternative power sources, site level efficiencies and other capital investments. Our investments in these technologies may also expose us to legal, operational and reputational and other risks. The pace of development of such technologies may be inadequate, such technologies may be insufficient, and we may not be able to deploy such technologies at a commercial scale. We will also consider the limited use of carbon neutralization or offsets in the future for hard to abate emissions to assist in meeting our 2050 carbon neutral goal, and there may be an insufficient supply of offsets to achieve our goals.

There will be varied and complex market impacts due to climate change and the transition to a low-carbon economy. There will be shifts in supply and demand for certain commodities, products and services in connection with evolving consumer and investor sentiments. Market perceptions of the mining sector, and, in particular, the role that certain metals will or will not play in the transition to a low-carbon economy remains uncertain. Potential financial impacts may include reduced investment in gold due to shifts in investor sentiment, increased production costs due to changing input prices, re-pricing of land valuation and assets, increased global competition for key materials needed for new technologies (lithium, copper, rare earth minerals used in solar technology, etc.), potential cost increases by insurers and lenders, and potential increases in taxation of the mining and metals sector.

Should the mining and metals sector not respond quickly enough to meeting globally accepted science-based reductions required to mitigate the long-term impacts of climate change, industry members may be subject to an increased risk of future climate litigation. In the U.S. and Canada, lawsuits have been filed against oil and gas companies to assign liability for climate-related impacts. Over time, litigation may also apply to other resource intensive sectors that fail to set and/or meet long-term reduction targets. While the Company is not currently subject to any lawsuits related to climate, no assurances can be provided that similar suits will not be brought in the future.

Our ability to meet our climate strategy commitments and goals is subject to numerous risks and uncertainties and relies on, among other things, our ability to invest in emissions reduction projects, our ability to implement operational changes and the availability of technology to achieve such commitments and goals. In addition, our ability to achieve our Scope 3 emissions targets is subject to the actions of entities not within our control. There is also a risk that some or all of the expected benefits of achieving such commitments and goals may fail to materialize within our anticipated time frames or at all. Investors and other stakeholders may not agree with our climate strategy commitments and goals, and we also face pressure from some in the investment community and certain public interest groups to limit the focus on ESG in our decision-making, arguing that ESG considerations do not relate to financial outcomes. A failure to meet our climate strategy commitments and goals and/or societal or investor expectations could result in damage to our reputation, decreased investor confidence and challenges in maintaining positive community relations, which can pose additional obstacles to our ability to conduct our operations and develop our projects, which may result in a material adverse impact on our business, financial position, results of operations, and growth prospects. Further, the Company's financing strategy is tied to its ESG commitments. The interest rate of Newmont's \$1 billion aggregate principal amount of 2.600% Sustainability-Linked Senior Notes due 2032 is linked to Newmont's performance against key ESG commitments regarding 2030 emissions reduction targets and the representation of women in senior leadership roles target. As such, a failure to meet our climate and sustainability targets can result in further expense and impact our financial condition and ability to raise capital in the future.

Our targets are uniquely tailored to our business, operations and capabilities, which do not easily lend to benchmarking against similar sustainability performance targets, and the related performance, of other companies. In addition, our climate-related targets are aspirational and subject to change, and reflect assumptions that are necessarily uncertain and may not be realized. We continue to review and revise our approach, and our targets may be further adjusted to align with future updates to our approach. The acquisition of Newcrest Mining Limited on November 7, 2023, required that we recalculate the target baseline years and trailing years GHG emissions data pursuant to our publicly disclosed greenhouse gas emissions calculation methodology framework. Additional rebaselining in connection with our pending and future assets sales is also expected. We are continuing to review our targets and roadmap which may result in additional adjustments in the future. Additionally, the methodologies that we use to calculate our Scope 1, Scope 2 and Scope 3 GHG emissions may change over time based upon changing industry standards, which may impact, positively or negatively, our ability to satisfy our targets, which could in turn adversely affect our reputation. Any major acquisition, merger, consolidation or divestiture or any series of related acquisitions, mergers, consolidations or divestitures, by or involving us, may impact our ability to achieve our targets and commitments. There is currently no generally accepted global definition (legal, regulatory or otherwise) of, nor market consensus as to what criteria qualify as, "green," "social," "sustainable" or "sustainability-linked" (and, in addition, the requirements of any such label may evolve from time to time), and therefore no assurance is or can be given that Newmont will meet any or all investor expectations.

Our operations and projects are subject to a range of transitional and physical risks related to climate change.

We believe that climate change has the potential to impact the regions and sites in which Newmont operates, as well as the surrounding communities. Long-term potential physical climate risks include, but are not limited to, higher temperature in all regions, higher intensity storm events in all regions, impacts to annual precipitation depending upon the latitude and proximity of the site to oceans, and more extreme heat for sites near the equator or in Australia. Unusually dry climates can increase the chance of our operations being impacted by bush or forest fires.

Physical risks related to extreme weather events such as extreme precipitation, flooding, longer wet or dry seasons, flooding and drought conditions, increased temperatures, sea level rise, landslides, mine flooding, tsunami, geysers and outbursts, avalanches, landslides, wildfires or brushfires, or more severe storms may have financial implications for the business. In particular, the effects of changes in rainfall and intensities, water shortages and changing storm patterns have from time to time adversely impacted, and may in the future adversely impact, our costs, production levels and financial performance. For example, we experienced severe flooding in early 2017 at our Tanami mine in Australia which led to shutdown of operations for several weeks. In 2019, Tanami completed the construction of a natural gas pipeline to deliver fuel to the site to replace diesel fuel that is trucked to the site on roads that regularly flood due to increasing seasonal rainfall. Our operations in Suriname and Peru have also experienced delays in connection with the delivery of key production supplies due to temporary flooding. In 2019, Cadia experienced droughts, which resulted in temporary process plant water shortages and lower processed volumes. In 2023, the Éléonore mine in Quebec Canada had to shut down for several weeks due to prolonged wildfires conditions nearby, and Lihir's operating and financial performance was impacted by lower feed grade reflecting a higher proportion of low grade material being processed in the second half of the year, following extreme rainfall that limited pit access and caused materials handling issues at the mine crusher. This followed prolonged drought conditions across the province of New Ireland in PNG, where Lihir is located, which resulted in limited raw water supply to Lihir. Floods and wildfires have also occurred near Cadia and Red Chris in recent years.

There is also the potential for disruption to transport routes associated with the distribution of our products. For example, Brucejack's glacial access road, which is an essential means of entering that mine site, may be subject to a risk of thawing due to the potential for an increase in average temperatures, which may be related to climate change. Severe storm events can also result in unpermitted off-site discharges, slope instability, mine pit erosion and structural failures, tailings storage facility overtopping and other impacts, including water storage and treatment facility capacity considerations. Extended dry seasons or unseasonal dry conditions could exacerbate dust generation from operating activities that may require additional controls for continued operation or result in compliance breaches. Changing climatic conditions may also affect the likelihood of meeting closure success criteria and require adjustments to mine site rehabilitation and closure plans. The higher potential for extreme heat conditions may affect equipment

efficiency. For additional information, see risk factors under the headings *"Our operations and projects are dependent on the availability of sufficient water supplies and subject to water-related risks"* and *"Our Company and the mining industry are facing continued geotechnical, geothermal and hydrogeological challenges, which could adversely impact our production and profitability."*

Such events can temporarily slow or halt operations due to physical damage to assets, reduced worker productivity for safety protocols on site related to extreme temperatures or lightening events, worker aviation and bus transport to or from the site, and local or global supply route disruptions that may limit transport of essential materials, chemicals and supplies, which could have an adverse impact on our results of operations and financial position. Additional financial impacts could include increased capital or operating costs to increase water storage and treatment capacity, obtain or develop maintenance and monitoring technologies, increase resiliency of facilities and establish supplier climate resiliency and contingency plans.

An increase in frequency and duration of extreme weather conditions can be followed by extended power outages. Energy disruptions can have an adverse impact on our results of operations and financial position due to production delays or additional costs to ensure business continuity through reliable sources of on-site power generation. Energy transmission and supply may be impacted by wildfires, such as those that occurred in Australia in 2020, which may interrupt electrical power transmission lines to mine sites, and that may pose risks to on-site facilities and energy generators, fuel dispensing systems and supplies. In jurisdictions that rely on purchased hydroelectric power, such as in Ghana and Peru, extreme drought and extended dry seasons may impact the electric utility's water supplies needed to generate hydroelectric power purchased by the mine to run operations, which would result in higher costs and/or limit energy availability for continuity of operations as well as impact our environmental systems and processes.

Our Company and the mining industry are facing continued geotechnical, geothermal, and hydrogeological challenges, which could adversely impact our production and profitability.

Newmont and the mining industry are facing continued geotechnical, geothermal and hydrogeological challenges due to the older age of certain of our mines and a trend toward mining of more complex deposits, the use of deeper and larger pits and the use of deep, bulk or selective underground mining techniques. This leads to higher pit walls, more complex underground environments and increased exposure to geotechnical instability and geothermal and hydrogeological impacts. As our operations are maturing, the open pits at many of our sites are getting deeper and we have experienced geotechnical failures (such as pit wall and slope failures) at some of our mines, including, without limitation, at our operations in Australia, Ghana, Peru, Canada, Colorado and at NGM, in Nevada. See also the risk factor under the heading *"Mining companies are increasingly required to consider and provide benefits to the communities and countries in which they operate in order to maintain operations"*.

Additionally, there are a number of risks and uncertainties associated with the block cave mining methods applied at Cadia, in New South Wales, Australia. These risks include a cave not propagating as anticipated, excessive air gaps forming during the cave propagation, unplanned ground movement occurring due to changes in stresses released in the surrounding rock and larger or more frequent mining-induced seismicity than anticipated. Additionally, during cave establishment and propagation, higher levels of seismic activity, and higher likelihood of damage to excavations from seismic events, are expected. This has been observed during the cave establishment phase of Cadia's PC2-3 project and is expected during the establishment of Cadia's PC1-2 project in the coming years. Such seismic events and associated damage may require changes to the mining plan and upgrades to ground support systems, which could take several months. Large seismic events may also occur after cave establishment and propagation and during steady state caving, although the likelihood of this is lower. Excessive water ingress, disturbance and the presence of fine materials may also give rise to unplanned releases of material of varying properties and of water through drawbells. Cadia recorded sudden unplanned releases of both dry fine ore material and wet mud material through drawbells in 2023.

In addition, there are a number of risks and uncertainties associated with the application of techniques used in the civil engineering industry for the stabilization of steep open pit slopes by Newmont at Lihir, which is located in Papua New Guinea. These risks include variation to technical models when compared to actual conditions, performance of reinforcement system in hot ground and delays with the execution of the civil works due to lack of experience with these techniques. The success of our operations depends, in part, on implementing engineering solutions to particular geotechnical, hydrogeological and geothermal conditions. For example, underground operations, large vertical shafts need to be excavated in order to provide ventilation to the underground environment, and sometimes these shafts are excavated using unsupported techniques such as raiseboring, whereby the walls of the shafts cannot be supported until the excavation is completed. If adverse and unexpected geotechnical and hydrogeological conditions are encountered, the shaft walls may become unstable. To prevent this type of incident occurring, thorough geotechnical and hydrogeological investigations and stability assessments are required and, if needed, alternate excavation locations or techniques need to be implemented. One such shaft wall failure incident occurred at Cadia in 2022, resulting in the need to abandon and backfill a shaft shortly after the completion of excavation to prevent further unravelling of the shaft wall and potential interruptions to other operations.

Operations may also experience challenges to operating conditions, such as inundation, inrush of water or other materials, airblast and those relating to elevated temperatures (including management and discharge of hot water encountered in the underground workings). These risks could result in damage to, or destruction of, mineral properties, production facilities, equipment or other properties, personal injury or death of employees or third parties, environmental damage, community outrage, delays in mining, increased production costs, monetary losses and possible legal liability. Our operations are also subject to risks associated with a natural disaster, which include risk of tsunami, wildfires, mine flooding, geysers and outbursts, cyclones, avalanches and landslides. In

addition, seismic activity may impact operations that are located in seismically active areas and subject to risks of earthquakes, such as Cadia and, with the related risks of tidal surge and tsunamis, Lihir. For instance, a large seismic event in 2017 impacted Cadia resulting in a temporary suspension of operations. Seismic activity has also been experienced at our Éléonore mine. Additionally, our Lihir operation is located within the Luise Caldera of the Luise Volcano which is located on the east coast of the Aniolum Island. The caldera is geothermally active in the form of hot springs and fumaroles.

Adverse geotechnical, geothermal and hydrogeological conditions, including surface or underground fires, floods, droughts, geysers and outbursts, coastal erosion and landslides, avalanches, cyclones and pit wall failures, can be difficult to predict. Such conditions are often affected by risks and hazards outside of our control, such as severe weather and considerable rainfall, which may lead to periodic floods, mudslides, wall instability and seismic activity, which may result in slippage of material. Such events may not be detected in advance.

In addition, Newmont has both operational (active and inactive) and closed tailings storage facilities ("TSFs") in a variety of climatic and geographic settings. Annually, Newmont manages and disposes more than 150 million tonnes of milled rock slurry, referred to as tailings, that are placed within engineered, surface containment facilities, or placed as structural backfill paste in underground mines (e.g., Éléonore, Porcupine). Newmont has experienced seepage and/or localized instability at TSFs which required us to re-evaluate our emergency response systems and make modifications to our TSFs. Issues with TSFs, such as instability, failure and/or seepage could occur in the future, and Newmont conducts detailed risk assessments considering potential failure modes to support understanding and development of risk mitigation measures in accordance with the As Low As Reasonably Practicable principle. The failure of a TSF embankment or a water storage dam at one of our mine sites could cause severe, and in some cases catastrophic, property and environmental damage and loss of life. For example, in early 2019, the extractive industry experienced a large-scale tailings dam failure at an unaffiliated mine in Brazil, which resulted in numerous fatalities and caused extensive property, environmental and reputational damage. Recognizing this risk, Newmont continues to review and refine our existing practices and, as a member of the International Council on Mining & Metals ("ICMM"), commits to implementation of the GISTM. Work is underway to bring all TSFs in our portfolio into conformance with the GISTM by August 2025, and no assurance can be given that conformance will be achieved by such deadline. Conformance with the GISTM as well as improved understanding of our tailings risks and requisite mitigation remains on-going and has and may continue to result in increases to our estimated sustaining costs and closure costs for existing tailings facilities. Despite these efforts, no assurance can be given that TSF failure events will not occur in the future.

A geotechnical failure of a TSF, dam, or pit slope could result in limited or restricted access to mine sites, suspension of operations, government investigations, regulatory actions or penalties, increased monitoring costs, remediation costs and other impacts, which could result in a material adverse effect on our results of operations and financial position. For example, in December 2023 the Company temporarily suspended its processing operations at the now divested Telfer operations in Western Australia after cracking and sinkholes were detected on an internal embankment of the site's TSF. Remediation works were completed in September 2024.

A failure to safely resolve any unexpected problems relating to these conditions at a commercially reasonable cost may result in damage to infrastructure or equipment or injury to personnel and may adversely impact the Company's operating results and financial position. See also the risk factors under the heading "*We may experience increased costs or losses resulting from the hazards and uncertainties associated with mining*" and "*Damage to our reputation may result in decreased investor confidence, challenges in maintaining positive community relations and can pose additional obstacles to our ability to develop our projects, which may result in a material adverse impact on our business, financial position, results of operations and growth prospects*" and "*Our operations and projects are subject to extensive environmental laws and regulations.*"

Our operations and projects may be adversely affected by rising energy prices or energy shortages.

Our mining operations and development projects require significant amounts of energy. Some of our operations are in remote locations requiring long-distance transmission of power or energy sources needed to generate power, and in some locations we compete with other companies for access to third party power generators or electrical supply networks. A disruption in the generation or transmission of energy, inadequate energy transmission infrastructure or the termination of any of our energy supply contracts could interrupt our energy supply and adversely affect our operations.

Our principal energy sources are purchased electricity, diesel fuel, heavy fuel oil and natural gas. A variety of factors, including higher energy usage in emerging market economies, actual and proposed taxation of carbon emissions as well as concerns surrounding global conflicts, could result in increased demand or limited supply of energy and/or sharply escalating diesel fuel, natural gas and other energy prices. A reduction in Northern Territory natural gas production is a specific concern for Tanami's short-term energy prices. Availability of renewable power sources or conflicting government regulations, such as the proposed reform of the energy market in Mexico, may have an impact on our ability to meet our reduction targets with a specific timeline. Changes in energy laws and regulations in various jurisdictions, restrictions on energy supply and increased energy prices could negatively impact our operating costs and cash flow.

As our operations move to reduce our GHG emissions, renewable power sources and technology at our operations will continue to be evaluated and implemented. Such transitions are likely to require capital expenditures and may result in additional costs. Certain of our operations may also become more dependent upon access to electrical power supply as certain mines advance projects

aimed at the electrification of large haulage fleets. The availability to access renewable power (with greater competition) and the readiness of technology to support decarbonization with the timeframe of the 2030 and 2050 targets remains subject to uncertainties, which could impact ability to achieve targets. See the risk factor above under the heading *"Our operations and projects are subject to a range of risks related to transitioning the business to meet regulatory, societal and investor expectations for operating in a low-carbon economy"*.

Our operations and projects are dependent on the availability of sufficient water supplies and subject to water-related risks.

We recognize the right to clean, safe water and that reliable water supplies are vital for hygiene, sanitation, livelihoods and the health of the environment. Water is also critical to our business, and the increasing pressure on water resources requires us to consider both current and future conditions in our management approach. We have set annual water efficiency targets at each of our operating sites. Additionally, we aim to achieve ambitious long-term water stewardship actions, which integrate our operations and value chain and support collective management of water through external partnerships and collaborations. A failure to meet our water targets and/or societal or investor expectations could also result in damage to our reputation, decreased investor confidence and challenges in maintaining positive community relations, which can pose additional obstacles to our ability to develop our projects, which may result in a material adverse impact on our business, financial position, results of operations and growth prospects.

Across the globe, water is a shared and regulated resource. Newmont operates in areas where watersheds are under stress with limited supply, increasing population and water demand, and impacted water in various forms. Increasing pressure on water use may occur due to in-migration of communities and increased populations in proximity to our operations. Although each of our operations currently has sufficient water rights, claims and contracts to cover its operational demands, we cannot predict the potential outcome of pending or future legal proceedings or community negotiations relating to our water rights, claims, contracts and uses.

Water shortages and surplus may also result from weather or climate impacts outside of the Company's control. Changes in the quantity of water, whether in excess or deficient amounts, may impact exploration and development activities, mining and processing operations, water management and treatment facilities, tailings storage facilities, closure and reclamation efforts, and may increase levels of dust land erosion and wildfires in dry conditions, and increase slope instability and the risk of water ingress in the case of prolonged wet conditions.

Our Peñasquito and CC&V operations are situated in areas with high baseline water stress. CC&V in Colorado must purchase water supply in order to meet site needs and augmentation requirements. Peñasquito in Mexico takes its water supply from the Cedros Aquifer which has limited and declining yield as it is located in a dry and arid area that is prone to drought, and also is relied upon by nearby communities as a water supply for drinking water and agriculture. The water supply at Peñasquito is thus subject to a significant degree of regulatory and community scrutiny, and increased costs, and Peñasquito has made long-term commitments to provide safe community water supplies.

Seasonality and changes in the levels of rainfall can also impact our operations. For example, in January 2023, our Tanami site in Australia experienced unexpected and significant rain resulting in flooding and road closure limiting our ability to get supplies to the site, causing mill backup and impacts to production. Similarly, at Boddington in Australia severe weather and heavy rainfall at Boddington caused delays and impacted productivity during the third quarter of 2021 and 2022. There is also a risk at Boddington that extended below average rainfall or the occurrence of drought in southwest Australia could impact raw water supply for the site. While we have incorporated systems to address the impact of the dry season and water shortages as part of our operating plans, we can make no assurances that those systems will be sufficient to address all shortages in water supply, which could result in production and processing interruptions.

In 2023, Lihir's performance was impacted following extreme rainfall limiting pit access and causing material handling issues at the crushers. Lihir has also experienced reduced milling rates due to limited raw water supply to the plant driven by drought conditions experienced across the New Ireland Province in PNG. Lihir has progressed options to improve its water management resilience, including improving its internal water recycling and identifying additional water sources and storage options. In addition, Cadia has previously experienced water scarcity from drought conditions in 2019 which resulted in a reduction in water use to assist the Orange community response to the drought.

Increased precipitation and severe storm events may potentially impact tailings storage facilities in the future by exceeding water management capacity, overtopping the facility, and/or undermining the geotechnical stability of the structure. We have experienced impacts at various sites in recent years due to heavy rainfall and severe storms. For example, in 2022, Yanacocha experienced heavy rainfall, above average historical levels, which resulted in significant water balance stress and required active emergency management. Refer to Note 25 to the Consolidated Financial Statements under the heading *Environmental Matters - Minera Yanacocha S.R.L.*, for additional information. Increased amounts of water may also result in flooding of mine pits, maintenance and storage facilities; or may exceed current water management and treatment capacity to store and treat water, physical conditions resulting in an unintended overflow and discharge either on or off of the mine site property. See the risk factor above under the heading *"Our operations and projects are subject to a range of risks related to transitioning the business to meet regulatory, societal and investor expectations for operating in a low-carbon economy"* for additional information.

Operations have identified seepage from infrastructure (tailings, waste rock and ore stockpiles) that may have an impact on water resources (groundwater and/or surface water); for example, seepage has been detected in the shallow and deep aquifers underlying the tailings facility at Red Chris. We are currently managing this risk through monitoring, collection and treatment systems. There is a risk that the seepage could have an impact on beneficial use of groundwater resulting in increased requirements for collection and treatment as well as the potential requirement to provide alternative water sources. See also the risk factor under the heading *"Our Company and the mining industry are facing continued geotechnical, geothermal and hydrogeological challenges, which could adversely impact our production and profitability."*

Laws and regulations may be introduced in some jurisdictions in which we operate which could limit our access to sufficient water resources in our operations, thus adversely affecting our operations. Additionally, laws, regulations and permit requirements focused on water management and discharge requirements are becoming increasingly stringent and may continue to require additional water management activities and/or water treatment during operation and into closure. We are also seeing increasingly stringent regulations of surface and groundwater at a number of our sites resulting in increased monitoring and potentially the need for pump back systems and treatment in the future. New requirements and regulation have resulted or may result in increased costs and could negatively impact our operating costs and cash flows in the future.

For more information on the Company's reclamation and remediation liabilities, refer to Notes 6 and 25 to the Consolidated Financial Statements, and the risk factor under the heading *"Mine closure, reclamation and remediation costs for environmental liabilities may exceed the provisions we have made."*

Our operations and projects are subject to risks related to our relationships and/or agreements with local communities, including Indigenous Peoples, and laws for the protection of cultural heritage.

The Company's relationships with the communities that are located near its operations or on whose land it operates are essential to the success of its existing operations, exploration activities and the construction and development of its projects. A failure to manage relationships with such communities may lead to local dissatisfaction which, in turn, may lead to interruptions to the Company's operations, exploration activities and development projects. Specific challenges in community relations include community concerns over management of increased traffic, migratory workforces, environmental impacts and resource depletion, social, environmental and cultural heritage impacts, increasing expectations regarding the level of benefits that communities receive, benefits sharing with Indigenous peoples' governments, concerns focused on the level of transparency regarding the payment of compensation and the provision of other benefits to affected landholders and the wider community. In particular, opposition by Indigenous communities to the Company's activities may require modifications to or preclude operation or development of its projects or may require entry into additional agreements with Indigenous communities, which may result in additional costs. Newmont's current and future operations are subject to a risk that one or more Indigenous communities in the locations in which we operate may oppose continued operation, further development or new development of its projects or operations. Claims and protests driven by such opposition may disrupt or delay activities, including permitting, at the Newmont's operations and projects. The negotiation and review of agreements, including components such as business development, participation, co-management and compensation and other benefits, involve complicated and sensitive issues, associated expectations and often competing interests. The nature and subject matter of these negotiations may result in community unrest which, in some instances, may lead to interruptions in our exploration programs, operational activities or delays to project implementation or development.

Additionally, the evolving obligations of governments and Indigenous people under international, national and local legislation and international conventions pertaining to the rights of Indigenous people may impact Newmont's operations and projects. For example, the Government of British Columbia, Canada has adopted the Declaration on the Rights of Indigenous Peoples Act (2019) to implement the United Nations Declaration on the Rights of Indigenous Peoples ("UNDRIP") in British Columbia, which may impact Red Chris and Brucejack.

Our operations are also subject to laws and regulations that provide for the protection and management of cultural heritage in the jurisdictions in which we operate. For example, following the destruction of Indigenous heritage sites at Juukan Gorge in Western Australia in 2020 and the inquiry and reports issued by the Commonwealth Parliament Joint Standing Committee on Northern Australia in 2021, mining companies have come under heightened scrutiny regarding cultural heritage management, including, for example, with respect to their governance and management processes and procedures around cultural heritage, engagement with Indigenous communities and protection of cultural landscapes. Although the parliamentary inquiry focused on Indigenous cultural heritage, laws to protect and manage cultural heritage also cover non-Indigenous (historic) heritage. Another example, in Western Australia, where Boddington is located, a new Aboriginal Cultural Heritage Act 2021 (WA) came into force in 2023, replacing the Aboriginal Heritage Act 1972 (WA) and introducing new offenses and increased penalties aimed at better protecting Aboriginal cultural heritage in Western Australia. In 2023, the WA Premier announced that the Aboriginal Cultural Heritage Act 2021 (WA) will be completely repealed, with an amended Aboriginal Heritage Act 1972 (WA) replacing it.

Further, cultural heritage in PNG is protected under the National Cultural Property (Preservation) Act 1965 (PNG). The main government bodies responsible for enforcing this Act are the National Museum and Art Gallery of PNG and the National Cultural Commission. The Lihir operation has a culturally significant site called the Ailaya Rock, located near the mining operations. Significant civil reinforcement work is being undertaken to protect the surrounding area's structural integrity. A failure to maintain the integrity of the surrounding area could inadvertently damage the site, resulting in impacts to community relations and reputation.

Newmont's operations could inadvertently disturb protected cultural heritage assets, resulting in international scrutiny by investors and non-governmental organizations, negative impact on stockholder value, compensation and/or offset claims, increased costs to projects and operations, delays impacting construction or production or project development, court action or other legal proceedings and lasting reputational damage.

Risks Related to the Jurisdictions in Which We Operate

Our operations and projects are subject to risks of doing business in multiple jurisdictions.

Exploration, development, production and mine closure activities are subject to regional, political, economic, community and other risks of doing business in multiple jurisdictions, including:

- Potential instability of foreign governments and changes in government policies, including relating to or in response to changes of U.S. laws or foreign policies;
- Expropriation or nationalization of property;
- Restrictions on the ability to pay dividends offshore or to otherwise repatriate funds;
- Restrictions on the ability of local operating companies to sell gold and other metals offshore for U.S. dollars, or on the ability of such companies to hold U.S. dollars or other foreign currencies in offshore bank accounts;
- Import and export regulations, including restrictions on the export of gold, copper, silver, lead and/or zinc;
- Disadvantages relating to submission to the jurisdiction of foreign courts or arbitration panels or enforcement or appeals of judgments at foreign courts or arbitration panels against a sovereign nation within its own territory;
- Royalty and tax increases or claims, including retroactive increases and claims and requests to renegotiate terms of existing investment agreements, contracts of work, leases, royalties and taxes, by governmental entities, including such increases, claims and/or requests by the governments of Argentina, Australia, Canada, Chile, the Dominican Republic, Ecuador, Fiji, Ghana, Mexico, Papua New Guinea, Peru, Suriname, the State of Colorado and the State of Nevada in the U.S.;
- Changes in laws or regulations in the jurisdictions in which we operate, including in changes resulting from changes in political administrations;
- Risk of increased taxation related to impacts to government revenue as a result of challenging socioeconomic conditions, including recessions and/or in connection with health and community emergencies, such as pandemics, epidemics or outbreaks (including COVID-19 and related variants), and climate events;
- Fines, fees, and sanctions imposed for failure to comply with the laws and regulations of the jurisdictions in which we operate;
- Risk of loss due to inability to access our properties or operations;
- Other risks arising out of foreign sovereignty over the areas in which our operations are conducted, including risks inherent in contracts with government owned entities such as unilateral cancellation or renegotiation of contracts, licenses or other mining rights;
- Delays in obtaining or renewing, or the inability to obtain, maintain or renew, necessary governmental permits, mining or operating leases and other agreements and/or approvals;
- Risk of loss due to civil strife, acts of war, guerrilla activities, insurrection and terrorism;
- Claims for increased mineral royalties or ownership interests by local or Indigenous communities;
- Increased expectations of local Indigenous communities for profit or other benefit sharing;
- Risk of loss due to criminal activities such as trespass, blockade, local artisanal or illegal mining, organized crime by drug cartels, theft and vandalism;
- Delays in obtaining or renewing collective bargaining or certain labor agreements, workforce unionization, or demand for profit sharing;
- Disadvantages of competing against companies from countries that are not subject to the rigorous laws and regulations of the U.S. or other jurisdictions, including without limitation, the U.S. Foreign Corrupt Practices Act, the U.K. Bribery Act and the Dodd-Frank Act;
- Increases in training and other costs and challenges relating to requirements by governmental entities to employ the nationals of the country in which a particular operation is located;
- Increased financing costs;
- Currency fluctuations, particularly in countries with high inflation;
- Foreign exchange controls;

- Increases in costs relating to, or restrictions or prohibitions on, the use of ports for concentrate storage and shipping, such as in relation to our Boddington operation where use of alternative ports is not currently economical, or in relation to our ability to procure economically feasible ports for developing projects;
- Risk of disruption, damage or failure of information technology systems, and risk of loss and operational delays due to impacts to operational technology systems, such as due to cyber-attacks, malicious software computer viruses, security breaches, design failures and natural disasters;
- Risk of loss due to disease, such as malaria or the zika virus, and other potential medical endemic or pandemic issues, such as Ebola or COVID-19, as a result of the potential related impact to employees, disruption to operations, supply chain delays, trade restrictions and impact on economic activity in affected countries or regions; and
- Disadvantage and risk of loss due to the limitations of certain local health systems and infrastructure to contain diseases and potential endemic health issues.

Consequently, our exploration, development and production activities may be affected by these and other factors, many of which are beyond our control, some of which could materially adversely affect our financial position or results of operations.

New or changing legislation and tax risks in certain operating jurisdictions could negatively affect us.

We have operations and conduct business in a number of jurisdictions, which may increase our susceptibility to sudden tax changes. For instance, a 12% export duty was imposed by the Argentina government in 2018, revised down to 8% thereafter, however, with the election of new government in 2023, the rate is now currently 0%. The state of New South Wales, Australia, passed 2023 legislation that imposes an increased stamp duty which materially affected the Newcrest transaction. Also in Australia, the Debt Deduction Creation Rules, introduced during 2024 and which will first apply to the 2025 year, could have the potential to limit the tax deductibility of intercompany interest expense. In the State of Zacatecas, Mexico, environmental taxes became effective in 2017 with little clarity on how the taxes are to be calculated. An ecological tax agreement was ratified in 2021 which provides clarity for 2021 to 2024, after which, the Company, along with other companies in the State of Zacatecas, will need to engage with governmental authorities to understand how the environmental tax would be levied year-over-year. Also, in Mexico, a 2021 tax reform bill proposed federal fees on revenue generated from mining which could impact our operations if passed. Furthermore, a new Economic Plan for 2022 (the "Proposal") was enacted. While the changes under the Proposal are not substantive in nature (in the sense that they do not create new taxes or increase applicable rates), they may increase the future cost of our compliance and pose additional uncertainties in application of the law. Further, the Mexican government has increased the Mining Tax rate from 7.5% to 8.5% effective on January 1, 2025. In the United States, at the federal and state level, regulatory changes which may be implemented in the area of tax reform remain uncertain and may adversely affect companies in the mining sector. For example, NGM could be impacted by the resolutions brought to the State of Nevada Legislature to amend the State Constitution to increase mining taxes. An example of this was the passing of Assembly Bill 495 in 2021 that results in a new excise tax on mining companies engaged in the business of extracting gold and silver in the state of Nevada. In 2024, Pillar II has been enacted in a number of countries. The Pillar II agreement was signed by 138 countries with the intent to equalize corporate tax around the world by implementing a global minimum tax of 15%. As Newmont primarily does business in jurisdictions with a tax rate greater than 15%, the Company does not anticipate a material impact to its financial statements. A number of changes in the laws, regulations and policies in PNG have recently been proposed or are currently being considered. See the risk factor under the heading *"Our operations at Lihir and project at Wafi-Golpu in PNG are subject to political and regulatory risks and other uncertainties"*. Taxation laws and other regulations of the jurisdictions in which we operate are complex, subject to varying interpretations and applications by the relevant tax authorities and subject to changes and revisions in the ordinary course. It is difficult to predict whether proposed changes to regulations will be passed or to what extent they will impact the Company. Any additional and/or unexpected taxes imposed on us could have a material and adverse impact on our Company. See also the risk factor under the heading *"Our operations and projects are subject to a range of risks related to transitioning the business to meet regulatory, societal and investor expectations for operating in a low-carbon economy"* for a discussion of uncertainties and potential tax increases in connection with climate change considerations.

Changes in mining or investment policies or shifts in political and social attitudes in the jurisdictions in which we operate may adversely affect our operations or profitability.

Our operations may be affected in a number of ways by laws and regulations related, but not limited to: restrictions on production; price controls; export controls; import restrictions, such as restrictions applicable to, among other things, equipment, services and supplies, currency remittance, income taxes, expropriation of property, foreign investment, maintenance of mineral, mining, or surface land tenure, environmental legislation, land use, surface land access, land claims of local communities, water use, and mine safety. Failure to comply strictly with applicable laws, regulations and local practices relating to applying for and maintaining land and tenure could result in loss, reduction or expropriation of entitlements, or the imposition of additional local or foreign parties as partners with carried or other interests, any of which may adversely affect our operations or profitability.

In addition, when governments struggle with deficits and concerns over the potential and actual effects of depressed economic conditions (which occurred in the past in connection with COVID-19 impacts), many of them have in the past, and may in the future, target the mining and metals sector in order to raise revenue. Governments are continually assessing the fiscal terms of the economic rent for a mining company to exploit resources in their countries. Numerous countries have implemented changes to their

mining regimes that reflect increased government control over or participation in the mining sector, including, but not limited to, changes of law affecting foreign ownership and takeovers, mandatory government participation in mining enterprises, taxation and royalties, working conditions, rates of exchange, exchange controls, exploration licensing, export duties, requirements to sell to the government, repatriation of income or return of capital, environmental protection, as well as requirements intended to boost the local economy, including usage of local goods and employment of local and community staff or contractors, among other benefits to be provided to local residents. The effects of the various requirements and uncertainties related to the economic risks of operating in foreign jurisdictions cannot be accurately predicted and could have a material adverse effect on our financial position or results of operations. Some concern exists with respect to investments in parts of the world where civil unrest, war, nationalist movements, political violence or economic crises are possible. These countries may also pose heightened risks of expropriation of assets, business interruption, increased taxation or unilateral modification of concessions and contracts. We do not maintain insurance policies against political risk. Occurrence of events for which we are not insured may affect our results of operations and financial position.

Our operations at Yanacocha and projects in Peru are subject to political and social unrest risks.

Minera Yanacocha S.R.L. ("Yanacocha"), including the mining operations at Yanacocha and the Conga project in Peru, has been the target of local political and community protests, some of which blocked the road between the Yanacocha mine and Conga project complexes and the City of Cajamarca in Peru and resulted in vandalism and equipment damage. While recent roadblocks and protests have diminished, and there is focus on local political activism and labor disputes, we cannot predict whether similar or more significant incidents will occur in the future. The recurrence of significant political or community opposition or protests could continue to adversely affect the continued operation of Yanacocha and other projects in the area.

Construction activities on our Conga project were suspended in 2011, at the request of Peru's central government following protests in Cajamarca by anti-mining activists led by the regional president. Based on the Company's internal project portfolio evaluation process, we have reprioritized other projects ahead of the Conga project, and therefore do not anticipate developing Conga in the next ten years. As a result, the Conga project is currently in care and maintenance and we will continue to evaluate long-term options to progress development of the Conga project. Should the Company be unable to develop the Conga project or conclude that future development is not in the best interest of the business, a future impairment charge may result.

The prior Central Government of Peru supported responsible mining as a vehicle for the growth and future development of Peru. However, following the presidential election in 2021, there has been considerable political unrest in Peru. In a close and contested election, Pedro Castillo was declared the president-elect of Peru in July 2021, which resulted in a period of protests, unrest and uncertainty around the political and social environment in Peru and Cajamarca. Amidst political turmoil and instability, Castillo made numerous changes to his cabinet, including ministers of mining, work and interior, and of prime ministers. Castillo was ultimately removed from office in late 2022 due to his attempt to dissolve the legislative body and install an emergency government. Political turmoil and division has continued in Peru as protest and demonstrations against the current President Dina Boluarte escalated in early 2023 resulting in clashes with security forces and violence.

The current Central Government's legislative priorities and support for responsible mining in Peru remains uncertain. Previous regional governments of Cajamarca and other political parties actively opposed certain mining projects in the past, including by protests, community demands and road blockages, which may occur again in the future. We are unable to predict the positions that will be taken by the Central or regional government and neighboring communities in the future and whether such positions or changes in law will affect current operations and new projects in Peru. Risks related to mining and foreign investment under the new administration include, without limitation, risks to mineral, mining and surface, land tenure and permitting, increased taxes and royalties, nationalization of mining assets and increased labor regulations, environmental and other regulatory requirements. Any change in government positions or laws on these issues could adversely affect the assets and operations of Yanacocha or other projects in Peru, which could have a material adverse effect on our results of operations and financial position. Additionally, the inability to operate or expand at Yanacocha could have an adverse impact on our growth and production in the region. See also the risk factor under the heading "*Mine closure, reclamation and remediation costs for environmental liabilities may exceed the provisions we have made*" and refer to Note 1 to the Consolidated Financial Statements regarding the Company's interest in Yanacocha.

Our Merian operation in Suriname is subject to political, security and economic risks.

We hold a 75% interest in the Merian gold mine ("Merian") in the mid-eastern part of Suriname. Suriname has experienced political instability and uncertainty in the past which may continue in future years. Suriname is faced with high debts to foreign creditors, significant inflation rates and has experienced a hyperinflationary economy. Significant devaluation of the Surinamese dollar against the U.S. dollar in recent years has resulted in an increase of the prices of certain goods and services within Suriname, including without limitation, the price of fuel, which had been subsidized by successive governments. The government of Suriname recently passed a new law to introduce Value Added Tax, which came into effect on January 1, 2023 and has drastically increased the cost of living and negatively impacts the purchasing power of the residents of Suriname, including our employees. These impacts and negative economic trends can cause social unrest, which may present risks for our operations in Suriname.

Operations and development in Suriname are governed by a mineral agreement with the Republic of Suriname. The mineral agreement was approved by parliament and requires approval by parliament to change. However, in 2021, the government made requests for prepayment of taxes and special solidarity payments in light of budgetary concerns, it is possible that the government may

request changes to the mineral agreement in the future. While the government is generally considered by the Company to be mining friendly, it is possible that the current or future government may adopt substantially different policies, make changes in taxation treatment or regulations, take arbitrary action which might halt operations, increase costs, or otherwise impact mining and exploration rights and/or permits, any of which could have a material and adverse effect on the Company's future cash flows, earnings, results of operations and/or financial condition.

The government of Suriname previously exercised an option to participate in a fully-funded 25 percent equity ownership stake in Merian. Suriname manages its participation through Staatsolie Maatschappij Suriname N.V. ("Staatsolie"), a Surinamese corporation with the Republic of Suriname as sole stockholder. If Staatsolie does not have sufficient funds or borrowing ability to make their capital commitments in accordance with the terms of the partnership agreement, our operations in Suriname could be impacted. See the risk factor under the heading *"Future funding requirements may affect our business, our ability to pay cash dividends or our ability to engage in share repurchase transactions."* Earlier in this section under "Risks Related to Our Business".

Our operations at Ahafo and Akyem in Ghana are subject to political, economic and other risks.

Newmont operates in Ghana pursuant to a Revised Investment Agreement ratified by Ghana's Parliament in 2015, which established a fixed fiscal and legal regime, including fixed royalty and tax rates, for Newmont operations in Ghana. The financial and tax stability periods established by such agreements expire as early as 2025 for Ahafo and 2027 for Akyem. The tenure of the Revised Investments Agreement is linked to the mining leases. The Akyem mining leases, which were due to expire in January 2025, were renewed in September 2024 and are currently pending ratification in Parliament. The Republic of Ghana has experienced worsening socioeconomic conditions in recent years. The Ghanaian cedi has experienced significant depreciation with inflation accelerating to 54.1% at the end of 2022. Ghana's credit rating worsened to speculative grade, at near default to default levels, as the Ghanaian Finance Ministry announced suspension of debt service payments in December 2022 on the majority of its external debt, including commercial and bilateral loans, and that Ghana was seeking to restructure its debt. Efforts in early 2023 to put in place a domestic debt exchange program have faced setbacks from pension funds and by individual bond holders leading to amended terms. Continued economic recession and/or unfavorable macroeconomic indicators have also resulted in pressures from the Government of Ghana to obtain more revenue and benefits from mining companies on the back of anti-mining sentiment and perceived inequities that the industry is not contributing its fair share. To address budgetary deficits, the Government of Ghana initiated measures to generate additional revenue from the mining industry and other sectors of the economy as it attempted to increase revenue collection through various tax audits and investigations, proposed new fees, increased revenue and tax initiatives and other vehicles, such as the Growth and Sustainability Levy, and in 2024, Emissions Levy and VAT on electricity. While the second half of 2023 experienced an improvement in the macroeconomic situation with inflation reducing to 23.2% in December 2023 and 23.8% in December 2024, the Ghanaian cedi being relatively stable, with support from the International Monetary Fund and World Bank in early 2024, significant economic risks remain. A new government was inaugurated on January 7, 2025 after a relatively peaceful election. Other risks include impacts to supply chain, restrictions and local procurement requirements under local content regulations. On the January 8, 2025 in the Daily Graphic newspaper, the Minerals Commission published the 6th edition of the Local Procurement List which includes a prohibition on mining by mining lease holders and requiring surface mining operations to be outsourced to companies with 100% Ghanaian stockholders and directors and underground operations to be outsourced to companies with 50% Ghanaian stockholders and directors. The Ghana Chamber of Mines, of which Newmont is a member, is reviewing the list and is to engage the government on this prohibition on owner mining. Additionally, there is a risk of increase in key commodity prices, more restrictive local banking requirements including requirements for repatriation of proceeds to banks domiciled in Ghana, limitations on capacity of banks to provide reclamation bonds, requests for further local employment requirements, requests for contract renegotiation and increases in contract rates and other costs. The government may grant artisanal mining rights or alternative mining rights, such as sand and gravel, in locations in which the Company has tenure rights, but no active operations, impacting the Company's non-operational land positions. Economic setbacks and anti-mining sentiment can also result in an increase in community frustration and friction with artisanal small-scale mining resulting in conflicts, which can negatively impact our operations in Ghana.

Our operations in Argentina are susceptible to risk as a result of economic and political instability in Argentina and labor unrest.

With the election of a new President at the end of 2023, the economic environment in Argentina has experienced stabilization during 2024. Although inflation was drastically reduced, it still is at a high level and will remain as a challenge for 2025. There continue to be risks relating to the uncertain and unpredictable political and economic environment in Argentina, especially at the provincial level in Santa Cruz where our Cerro Negro mine is located. Argentina's central bank instituted a number of foreign currency controls in an effort to stabilize the local currency. Although some flexibility has been introduced, major restrictions and controls remain in place. For information on Argentina's foreign currency controls and their effect on our operations, see the section titled "Foreign Currency Exchange Rates" in Item 7, Management's Discussion and Analysis of Consolidated Financial Condition and Results of Operations. Maintaining operating revenues in Argentine pesos could expose us to the risks of peso devaluation and high domestic inflation.

In recent years, we experienced work stoppages by miners represented by unions at the Cerro Negro Mine. Disruptions may arise again in the future with the unions at the Cerro Negro mine that could adversely affect access to, and operations at, the Cerro Negro Mine. For more information see the risk factor under the heading *"Our business depends on good relations with our employees."*

Our operations at Lihir and project at Wafi-Golpu in PNG are subject to political and regulatory risks and other uncertainties.

Our Lihir operation, which comprises an open pit mine that produces gold doré, is located on the island of Aniolum, PNG. We also hold a 50% interest in a joint venture that owns the Wafi-Golpu exploration project ("Wafi-Golpu" and such joint venture, "WGJV"), which is located in the province of Morobe, PNG. The current PNG administration, led by Prime Minister James Marape, has stated that it wants to increase benefits for PNG from extractive projects. Potential policy changes could include introducing a new production sharing regime for minerals and/or oil/gas, amending or replacing the PNG Mining Act of 1992, introducing domestic processing/refining requirements, changing the level and manner of local equity participation in projects and introducing new taxation regimes, banking and foreign exchange controls and/or controls pertaining to the holding of cash and remittance of profits and capital to parent companies. Any such change could impact our operating results and financial condition.

In 2020, the PNG Government announced that the special mining lease ("SML") for the Porgera mining operation (a major mining operation in PNG which was owned and operated by the Porgera JV and not Newmont) would not be renewed. It subsequently amended the Mining Act and issued a new SML for Porgera to Kumul Mineral Holdings Limited (a State-owned company). Since taking this decision, the PNG Government has been working with the Porgera JV participants and other key stakeholders to establish new arrangements for restarting and operating Porgera. During 2023, the parties signed various agreements and the Government passed specific enabling legislation for a restart of operations at Porgera under new commercial terms. The restart occurred in December 2023. The PNG Government has stated that the decision not to renew the Porgera SML is specifically related to environmental damages claims and resettlement at the Porgera mine and has no bearing on any other operations, including Lihir, or advanced exploration projects, including Wafi-Golpu.

In 2020, the PNG government prepared and submitted to the National Parliament of PNG (the "PNG Parliament") a proposed new organic law to introduce a production sharing regime for the mining sector. The proposed organic law will require the approval of a two thirds majority of the PNG Parliament and, if passed in its current proposed form, purports to transfer ownership of minerals from the State of PNG to state-owned entities who would then be responsible for negotiating mineral production sharing arrangements. As currently drafted, the bill containing the proposed organic law will not apply to Lihir, but could potentially apply to Wafi-Golpu if a mining lease or mining development contract is not in place before the effective date for the proposed organic law. The bill is yet to be debated in the PNG Parliament. In December 2024 Prime Minister Marape reaffirmed the Government's intention to reform PNG's mining and oil/gas laws as part of PNG's 50th anniversary of independence in 2025 and indicated a production sharing regime for minerals and/or oil/gas remains under consideration.

On October 29, 2021, Prime Minister Marape announced proposed legislation which, if enacted, would regulate the export of gold from PNG and require that mining companies operating in PNG refine gold with a new national mint. At this stage, it is unclear whether this proposed legislation will become law and, if so, when it would take effect. In addition, in June 2023, the PNG government released a new national gold bullion policy setting out the government's objective of establishing a domestic gold bullion program to refine gold, hold gold reserves and eventually enter into trading in the world gold market. It is unclear when or how the new national gold bullion policy will be implemented, and how the policy will interact with the legislation proposed in 2021. Under the terms of the Lihir mining development contract, we may be required to refine a portion of our Lihir gold production within PNG if certain quality and security requirements are met and the terms offered are commercially competitive, but it is otherwise free to enter into arms' length refining contracts with refineries outside of PNG.

The PNG government has also announced that it is considering replacing the current PNG Income Tax Act with a new Income Tax Act (the "NITA") with limited consultation undertaken to date. The latest draft legislation provides that the NITA will come into force from January 1, 2026, with further consultation and amendments expected during 2025. It remains uncertain as to whether existing tax attributes of Lihir and Wafi-Golpu will be transitioned under the new law due to the lack of key regulations and other key ancillary pieces of legislation. Any adverse changes to the tax laws and regulations will affect Lihir because its Mining Development Contract does not provide protection against income tax law change. Such changes may also affect Wafi-Golpu depending on the terms of any project agreements that may be entered into with the PNG Government.

There is also the potential for legal challenges to the Wafi-Golpu permitting process as it progresses towards completion, including by PNG provincial governments, landowner groups and civil society organizations. For example, in March 2021 and December 2022, the governor of Morobe Province and certain residents of the surrounding areas of Wafi-Golpu, respectively, commenced judicial review applications against the State of PNG, challenging the December 2020 grant of the environmental permit for Wafi-Golpu. Both reviews are still to be heard and determined. Any such legal challenges may adversely impact the Wafi-Golpu permitting process. In addition, WGJV is currently engaging with the State of PNG to progress the permitting of Wafi-Golpu and has commenced discussions relating to its application for a special mining lease, which was submitted to the PNG Mineral Resources Authority in 2016. In April 2023, WGJV signed a Framework Memorandum of Understanding with the State of PNG, which confirmed the parties' intent to proceed with the project at Wafi-Golpu, subject to finalizing the permitting process and approvals of the boards of both Newcrest (now Newmont) and Harmony Gold, and progress toward signing a mining development contract, which is a prerequisite to granting a special mining lease. The timing for completing the discussions is uncertain and there is no assurance of the outcomes.

Changes in the laws, regulations and policies described above, or to the manner in which they are interpreted or applied to us, may also adversely impact our ability to extend the Lihir special mining lease upon its expiration in 2035.

Our operations and projects in Canada are subject to legal and regulatory risks and other uncertainties in connection with claims and challenges by Indigenous groups.

First Nations have made claims in respect of Indigenous rights and title to substantial portions of land and water across Canada, which could impact our exploration projects, and operations at Red Chris, Porcupine, Musselwhite, Éléonore and Brucejack. Some of these claims are made outside of treaty and other processes. The effect of such claims on any particular area of land will not be determinable until the exact nature of historical use, occupancy and rights to such property have been clarified, whether by a decision of the Canadian courts or definition in a treaty or otherwise. First Nations throughout Canada are seeking settlements with respect to these claims, including compensation from governments, and are seeking rights to regulate activities by companies within their traditional territories. The effect of these claims cannot be estimated at this time. The federal and provincial governments in Canada have been seeking to negotiate settlements with respective groups in order to resolve many of these claims, and the government routinely delegates procedural aspects of its duty to consult the First Nations to project proponents, particularly with respect to the permitting process. For example, a Statement of Claim filed in November 2024 asserts that resumption of open pit mining at the Pamour mine in Timmins, Ontario, Canada would be without proper consultation or consideration of the cumulative impacts of Taykwa Tagamou Nation's traditional territory and Aboriginal rights, and as such, the associated environmental permits previously issued by the Ontario government with respect to Pamour ought to be revoked (see Note 25 - Commitments and contingencies of Notes to Consolidated Financial Statements in Part II, Item 8 of this Annual Report on Form 10-K for additional information regarding this claim).

We hold a 70% interest in the Red Chris operation, which comprises an open pit mine that produces gold, copper and silver concentrate, located in British Columbia, Canada. Our Brucejack operation, which comprises an underground mine that produces gold/silver doré and flotation concentrate and hosts the Valley of the Kings high-grade gold deposit, is also located in British Columbia, Canada. In British Columbia, as well as in Canada more generally, the nature and extent of Indigenous rights and title remains the subject of active debate, claims and litigation issues surrounding Indigenous title and rights remain ongoing.

In addition, the government of British Columbia has adopted the UNDRIP and committed to implement UNDRIP in British Columbia, with federal government following suit in 2021 where UNDRIP became federal law in 2021. The provincial and federal legislations commits to systematically review the province's laws for alignment with UNDRIP principles, while also encouraging new agreements with Indigenous groups that are intended to address outstanding governance questions around the nature of Indigenous rights and title interests in Canada and in British Columbia. In November 2023 a consent-based decision making agreement under section 7 of the UNDRIP was entered into between the government of British Columbia and the Tahltan Central Government ("TCG") of the Tahltan Nation outlining the process for consent-based decision making for the review of substantial changes to the environmental assessment certificate for the Red Chris mine. The processes outlined in this agreement will apply to changes to the Red Chris environmental assessment certificate relating to the proposed development and operation of the Red Chris block cave mine. Failure or delays in implementing the agreement or to obtain prior informed consent of the TCG may impact the proposed development of the Red Chris block cave mine.

Additionally, the government of British Columbia has committed to reform the Mineral Tenure Act, which governs the acquisition and holding of mineral tenures in British Columbia, in consultation with First Nations and First Nation organizations. This follows challenges by several First Nations in British Columbia against the "free entry" mineral staking regime in the province and a September 2023 Supreme Court of British Columbia decision that held that the province of British Columbia has a duty to consult Indigenous groups when registering mineral claims under the Mineral Tenure Act within their traditional territories. As this reform work remains on-going, the impacts of these developments on the acquisition and renewal of mineral tenures in British Columbia are not yet known.

Risks Related to Our Workforce

Our business depends on good relations with our employees.

Production at our mines is dependent upon the efforts of our employees and, consequently, our maintenance of good relationships with our employees. Due to union activities or other employee actions, we could experience labor disputes, work stops or other disruptions in production that could adversely affect us. For example, in recent years, there have been work stoppages by miners represented by unions at our Peñasquito, Cerro Negro and Merian mines, which have disrupted operations. Certain regions in which we operate, including Central and Latin America, have witnessed notable trends in labor relations, including increasing emphasis on workers' rights and labor protections. Governments and civil society organizations have been advocating for improved labor standards, wages and working conditions, leading to the implementation of new labor laws and regulations in a number of jurisdictions. Additionally, collective bargaining has gained prominence as a means to negotiate and secure favorable terms for workers.

At December 31, 2024, various unions represented approximately 30.4% of our employee workforce worldwide. In 2022, Newmont implemented a new employment model in Ghana converting permanent employees into two-year fixed term contracts. Although 99.8% of eligible employees accepted the new fixed term contract and, received severance for their years of service, following implementation of the new employment model, the two unions requested and were granted new collective bargaining certificates from Ghana's Chief Labor Officer for bargaining rights for the class of workers to be represented. The two unions are litigating for bargaining rights to be determined based on verification of membership numbers resulting in targeted efforts to increase

membership and a writ of summons was issued by the Ghana Mine Workers Union and the suit is ongoing. In Peru, our two labor agreements expire in 2026 and 2027. In Suriname, the collective bargaining with the union for our Merian mine was entered into in 2023, and will expire in 2025. In Argentina where there are three district unions; one union has an expired agreement and another has an agreement in place until 2024. In Timmins, Ontario, we renegotiated a five-year collective bargaining agreement for our Porcupine mine with the United Steelworkers Union in October 2023, which will be in effect through October 2028. In Mexico, following negotiations, we reached a profit sharing agreement in 2022 whereby union represented workforce will participate in uncapped profit-sharing bonus up to 10%, which will result in increased labor costs in the future. A collective bargaining agreement expired in 2024 and in October 2024 Newmont Peñasquito and the National Union of Mining, Metallurgical, Steel, and Similar Workers of Mexico (the Union) agreed on a new Collective Bargain Agreement (CBA) for 2024-2026, reflecting the mutual commitment of all parties. Red Chris has a unionized workforce and has a collective agreement in place from April 2023 until April 2025. One provision of the Red Chris Collective Bargaining Agreement ("CBA") is still being resolved through arbitration. There is an existing employee enterprise agreement in place at Cadia with a nominal expiry date in 2025. A failure to successfully enter into new contracts or resolve ongoing union complaints could result in future labor disputes, work stoppages or other disruptions in production that could adversely affect our operations and financial performance. Future disputes at the Company's operations, projects or joint ventures may not be resolved without disruptions.

Our Peñasquito operation in Mexico is subject to social, political, regulatory, and economic risks.

Our Peñasquito operation has in the past, and may in the future, be affected significantly and adversely by social, political, regulatory, or economic developments in Mexico. A wide range of general and industry-specific Mexican federal and state environmental laws and regulations apply to our operations. These laws and regulations are often difficult and costly to comply with and carry substantial penalties for non-compliance. For example, in the State of Zacatecas, Mexico, environmental taxes became effective in 2017 with little clarity on how the taxes are to be calculated. An ecological tax agreement was ratified in 2021 which provides clarity for 2021 to 2024, after which, the Company, along with other companies in the State of Zacatecas, will need to engage with governmental authorities to understand how the environmental tax would be levied year-over-year. Additionally, in May 2023, the Mexican government published several amendments to laws relating to the country's mining industry, which includes changes to Mexico's Mining Law, National Waters Law, General Law of Ecological Equilibrium and Environmental Protection and General Law for the Prevention and Integral Handling of Wastes ("Mining Reform"). The Mining Reform is expected to add significant uncertainty for foreign investors in Mexico and companies operating in the mining sector, including Newmont. As a result of the Mining Reform, we expect that it will be more difficult for us to access/maintain rights to land and water, thereby negatively impacting our mining activities within Mexico, raising concerns around exploration programs, security of concessions, and out of cycle community negotiations. If political and regulatory trends continue in a manner that is increasingly less supportive of mining, it can have an adverse impact on our operations and financial results. On June, 2023, the Company filed an injunction (Amparo) against the reforms, and was served with a provisional suspension to the applicability of several provisions of the Mining Reform on January 2024. Additionally, in February 2024, Mexico's president presented before parliament a series of new constitutional reforms. The proposed reforms include a possible ban on the granting of open pit mining concessions and banning activities related to the exploration, exploitation, benefit or use of minerals or metals using open pit mining methods, and potential limitations on water concessions in certain areas of the country. If proposed reforms were to be enacted it could materially impact our exploration activities and operations at Peñasquito and adversely impact financial results.

Production at our Peñasquito operation is dependent upon the efforts of our employees and, consequently, our maintenance of good relationships with our employees. In recent years, we have had several disputes with the National Union of Mine and Metal Workers of the Mexican Republic ("the Union"). Following negotiations in 2022, Newmont and the Union reached a CBA in June 2022 whereby Union represented workforce will participate in uncapped profit-sharing bonus up to 10%, which resulted in increased labor costs. In June 2023, the Union made claims regarding violations of legal regulations and labor agreements (which the Company refuted) and notified the Company of a strike action demanding an increase in the uncapped profit-sharing benefit provided for in the CBA that represented a 100 percent increase equivalent to a 20 percent instead of 10 percent profit-sharing. The Company urged the Union to abide by the mutually agreed CBA and engaged in dialogue with the Union and the government, but the disagreement remained unresolved until October 2023 when the parties reached a definitive agreement to end the strike. Per the agreement, the Company paid Peñasquito workers a fixed amount equivalent to approximately 60% of wages for the duration of the strike, and an additional bonus of two months' wages to be paid out in the second quarter of 2024, given that the Peñasquito mine reported no profit in 2023 as a consequence of the strike. Additionally, as a part of a separate annual negotiation under the Collective Bargaining Agreement, the Company agreed to an annual salary increase of 8% effective as of August 1, 2023, which is in line with the Mexican mining industry wage increases for 2023. In October 2024, Newmont Peñasquito and the Union agreed on a new CBA for 2024-2026, reflecting the mutual commitment of all parties.

From June 2023 to October 2023, Minera Peñasquito suspended operations, which negatively impacted production and revenue. Any failure to successfully resolve future union complaints could result in additional work stoppages and/or other future disruptions in production and labor issues that could adversely affect our operations and financial performance and our ability to achieve expected results and guidance.

A deterioration in Mexico's economy, social instability, political unrest, or other adverse social developments in Mexico could also adversely affect operating results at Peñasquito, as well as the safety and security of the site and workforce. For example, in recent years, Mexico has experienced a period of increasing criminal activity, primarily due to the activities of drug cartels and related

criminal organizations, including in the State of Zacatecas. Any increase in the level of violence or a concentration of violence near or around the Peñasquito mine could have an adverse effect on operating results.

We may not be able to operate successfully if we are unable to recruit, hire, retain and develop key personnel and a qualified and diverse workforce. In addition, we are dependent upon our employees being able to perform their jobs in a safe and respectful work environment.

We depend upon the services of a number of key executives and management personnel. Our success is also dependent on the contributions of our highly skilled and experienced workforce. Our ability to achieve our operating goals depends upon our ability to recruit, hire, retain and develop qualified and diverse personnel to execute on our strategy. There continues to be competition over highly skilled personnel in our industry. If we lose key personnel, or one or more members of our senior management team and/or executive leadership team and we fail to develop adequate succession plans, or if we fail to hire, retain and develop qualified and diverse employees, our business, financial condition, results of operations and cash flows could be harmed. Additionally, efforts to retain, attract and develop key personnel may also result in additional expenses which could adversely impact our financial performance and profitability.

Our business is dependent upon our workforce being able to safely perform their jobs, including the potential for physical injuries or illness or fatality. If we experience periods where our employees are unable to perform their jobs for any reason, including as a result of illness (such as COVID-19), our operations could be adversely affected. See the risk factor under the heading *"Our operations and business have in the past been affected by the COVID-19 pandemic, and may be materially and adversely impacted in the future by pandemics, epidemics and other health emergencies."*

In addition to physical safety, protecting the psychological safety of our employees is necessary to maintaining a safe, respectful and inclusive work environment. We are fundamentally committed to creating and maintaining a work environment in which employees are treated fairly, with dignity, decency, respect and in accordance with all applicable laws. We recognize that bullying, sexual misconduct and sexual harassment, and harassment based on other protected categories, including race, have been prevalent in every industry, including the mining industry. Features of the mining industry, such as being a historically hierarchical and male-dominated culture, create risk factors for harmful workplace behavior. While we do not tolerate discrimination and harassment of any kind (including but not limited to gender, sexual orientation, gender identity, gender expression, race, religion, national origin, ethnicity, age, or disability, among others), our policies and processes may not prevent or detect all potential harmful workplace behaviors. We occasionally identify or are apprised of information or allegations that certain employees, affiliates, agents or associated persons may have engaged in harmful behaviors and improper, inappropriate or unlawful conduct, including but not limited to bullying, discrimination and harassment. If the Company fails to maintain a safe, respectful and inclusive work environment, it could impact our ability to retain talent and maintain a diverse workforce and damage the Company's reputation.

If the Company fails to maintain a safe environment that is free of harassment, discrimination or bullying, it could adversely impact employee engagement, performance and productivity, result in potential legal claims and/or damage the Company's reputation, which could have a material adverse effect on our business, financial position and results of operations or adversely affect the Company's market value. See also the risk factor under the heading *"Damage to our reputation may result in decreased investor confidence, challenges in maintaining positive community relations and can pose additional obstacles to our ability to develop our projects, which may result in a material adverse impact on our business, financial position, results of operations and growth prospects."*

We rely on contractors to conduct a significant portion of our operations and construction projects.

A significant portion of our operations and construction projects are currently conducted in whole or in part by contractors. As a result, our operations are subject to a number of risks, some of which are outside our control, including:

- Negotiating agreements with contractors on acceptable terms;
- New legislation limiting or altering the ability to utilize contractors or outsourced resources;
- The inability to replace a contractor and its operating equipment in the event that either party terminates the agreement;
- Reduced control over those aspects of operations which are the responsibility of the contractor;
- Failure of a contractor to perform under its agreement;
- Interruption of operations or increased costs in the event that a contractor ceases its business due to insolvency or other unforeseen events;
- Failure of a contractor to comply with applicable legal and regulatory requirements, to the extent it is responsible for such compliance;
- Problems of a contractor with managing its workforce, labor unrest or other employment issues; and
- Liability to third parties as a result of the actions of our contractors.

A failure of contractors to align employment practices with Newmont standards can also result in reactions from our employees and our workforce as they express solidarity with their counterparts in the field.

In addition, laws and regulations relating to the use of contractors may vary in the jurisdictions in which we operate, and changes in legal and regulatory restrictions may also impact our ability to utilize contractors and outsourcing services. For example, new mining industry regulations came into effect in Ghana, Africa, which require that the supply of specific products and services, and certain roles, be reserved for citizens, which may limit the pool of available contractors and service providers and restrict our ability to utilize certain contractors. Additionally, the Mexican government enacted labor and tax laws in April 2021, significantly restricting certain subcontracting and outsourcing of personnel, which has required the conversion of certain contractors to employee status and resulted in increased labor costs. Further changes in law and the occurrence of one or more of these risks could adversely affect our results of operations and financial position.

Legal Risks

Our business is subject to the U.S. Foreign Corrupt Practices Act, and other related anti-bribery laws and regulations. A breach or violation of these rules and regulations could lead to substantial sanctions and civil and criminal prosecution, as well as fines and penalties, litigation, loss of licenses or permits and other collateral consequences and reputational harm.

We operate in certain jurisdictions that have experienced governmental and private sector corruption to some degree, and, in certain circumstances, compliance with anti-bribery laws and heightened expectations of enforcement authorities may be in tension with certain local customs and practices. The U.S. Foreign Corrupt Practices Act and other laws with extraterritorial reach, including the U.K. Bribery Act, and anti-bribery laws in other jurisdictions in which we operate generally prohibit companies and their intermediaries from making improper payments for the purpose of obtaining or retaining business or other improper commercial advantage. We have a business integrity and compliance program which includes our Code of Conduct, Business Integrity Policy and other policies, standards, and procedures, all of which mandate compliance with these anti-bribery laws by the Company and its affiliates and their personnel, and also by third parties when they are engaged on our behalf. Our program also includes preventative and detective controls, and a well-publicized business integrity helpline for raising complaints (including the option for anonymity if the reporter so chooses), questions and concerns as well as processes for evaluating and investigating such concerns and assurances of non-retaliation for persons who raise concerns in good faith. We report regularly to the executive leadership team and the Audit Committee of our Board of Directors on such program components.

We could be held responsible if our internal controls, policies, and procedures fail to protect us from misinterpretation of, or noncompliance with, applicable anti-bribery laws, regulations and internal policies, recklessness, fraudulent behavior, dishonesty or other inappropriate acts committed by our affiliates, employees, agents, or associated persons for which we might be considered responsible. As such, our corporate internal controls policies and processes may not prevent or detect all potential breaches of law or other governance practices. In addition, and despite the fact that Newmont undertook significant pre and post-acquisition due diligence efforts, the compliance mechanisms and monitoring programs adopted and implemented by Newcrest prior to our acquisition of Newcrest in November 2023 may not have adequately prevented or detected all possible violations of the U.S. Foreign Corrupt Practices Act and/or other applicable anti-bribery laws and regulations attributable to Newcrest prior to Newmont's acquisition and we may be held liable for any such violations.

We occasionally identify or are apprised of information or allegations that certain employees, affiliates, agents or associated persons may have engaged in improper or unlawful conduct for which we might be held responsible. Our policy when receiving credible information or allegations is to conduct investigations and compliance reviews to evaluate that information, determine compliance with applicable anti-bribery laws and regulations and company policies and take such remedial steps as may be warranted, including the possibility of making a voluntary self-disclosure to the applicable authorities. Violations of these laws, or allegations of such violations, could lead to substantial investigation and remedial costs, sanctions and civil and criminal prosecution, as well as fines and penalties, litigation, loss of operating licenses or permits and other collateral consequences, and may damage the Company's reputation, which could have a material adverse effect on our business, financial position and results of operations or cause the market value of our common shares to decline.

Our business is subject to U.S. export control laws, economic sanctions, and other international trade compliance regulations with extraterritorial reach. A breach or violation of these laws could lead to substantial sanctions, civil and criminal prosecution, fines, penalties, litigation, loss of licenses or permits, and other collateral consequences, including reputational harm.

Export control laws, economic sanctions and international trade compliance regulations are always changing. As such, we have established a trade compliance program that includes policies, standards, and procedures, designed to ensure compliance with these regulations. Our program includes preventative and detective controls, employee training, and a robust third-party screening and ongoing monitoring program. Despite these efforts, our internal controls, policies, and procedures may not detect or prevent all violations of trade compliance laws, and we could be held accountable for misconduct, errors, or failures by employees, affiliates, agents, or third-party partners. Additionally, in the context of our recent acquisition of Newcrest in November 2023, prior compliance mechanisms and monitoring efforts by Newcrest may not have adequately prevented or detected all violations of applicable trade compliance laws. We

conduct investigations and evaluations in response to credible allegations of noncompliance, and may take remedial actions, including, where applicable, voluntary disclosures to authorities. Violations or allegations of trade compliance breaches could result in significant investigation costs, sanctions, litigation, loss of licenses, and reputational damage, which may materially impact our financial condition, operations, and the market value of our common shares.

Title to some of our properties may be insufficient, defective, or challenged.

The sufficiency or validity of the Company's Legal Title in and to its properties may be uncertain or subject to challenges by third parties, including governmental authorities, Indigenous or communal groups, or private entities. For example, at our Conga project in Peru, we continue to seek resolution to a land dispute with local residents. In Mexico, exploration and mining rights are granted through a mining concession, pertaining to the mineral estate, and do not confer rights of ownership, possession, use, or access in or to the corresponding surface estate. Surface rights must be acquired through purchase, lease, or easement from private parties, local communities, or governmental authorities. We enter into temporary occupation agreements ranging from five to thirty years with the Ejido communities, which allow us to use the surface of the lands for our mining operations, and at any particular time we may be involved in negotiations to enter into new temporary occupation agreements or other surface access agreements or amend existing agreements. Failure to reach new, or renewal of existing, agreements or disputes regarding these agreements may lead to, blockades, suspension of operations, project delays, and on occasion, may lead to legal disputes.

In addition, certain Australian and Canadian properties are owned by Indigenous peoples or are subject to certain inherent aboriginal rights, treaty rights, and/or asserted rights in and to their traditional territories, and our ability to acquire necessary rights to explore, develop, or mine these properties is dependent on agreements with them. Our ability to secure permits, licenses and/or agreements may be dependent on formal determinations of Indigenous or Native title rights issued by governmental authorities, the lack or delay of which may impede the Company's ability to explore, develop, or mine. In Ghana, Peru, and Suriname, our Legal Title may be subject to challenge based on the presence and activities of artisanal miners or other trespassers due to adverse possession and/or the inability of the Company to satisfy its statutory, regulatory, or contractual obligations required to maintain, extend, or renew Legal Title in and to its land tenure. See risk factors under the headings "*We may be unable to obtain or retain necessary permits and land or mining tenure, which could adversely affect our operations*", "*Illegal mining and artisanal mining occurs on or adjacent to certain of our properties exposing such sites to security risks*", and "*Civil disturbances and criminal activities can disrupt business and expose the Company to liability*" above for further information. A determination of insufficient or defective Legal Title, or an adverse outcome from a challenge to our Legal Title, could result in loss, litigation, insurance claims, reputational damage, and the impairment, suspension, or cessation of exploration, development, or mining activities. Such outcomes could materially impact our operations, and result in significant financial losses that affect the Company's business as a whole.

Risks Related to Our Common Stock

The price of our common stock may be volatile, which may make it difficult for you to sell the common stock at the price you paid or at prices you find attractive.

As a publicly traded company with securities listed on the New York Stock Exchange ("NYSE"), the Toronto Stock Exchange ("TSX"), the Australian Securities Exchange ("ASX"), and the Papua New Guinea Stock Exchange ("PNGX") the market price and volume of our common stock may be subject to significant fluctuations due not only to general stock market conditions but also to a change in sentiment in the market regarding the performance of our operations, business prospects or liquidity. Among the factors that could affect the price of our common stock are: (i) changes in gold, and to a lesser extent, silver, copper, zinc or lead prices; (ii) operating and financial performance that vary from the guidance we provided to securities analysts and investors or the expectations of securities analysts and investors or changes in our outlook; (iii) developments in our business or in the mining sector generally; (iv) regulatory changes affecting our industry generally or our business and operations; (v) the operating and stock price performance of companies that investors consider to be comparable to us; (vi) announcements of strategic developments, acquisitions, dispositions and other material events by us or our competitors; (vii) our ability to integrate and operate the companies and the businesses that we acquire; (viii) the perception of the Company's ESG performance and its ability to deliver on ESG commitments and expectations, including in connection with the Company's climate strategy; (ix) response to activism; and (x) changes in global financial markets and macroeconomic and geopolitical conditions, such as interest or foreign exchange rates, an escalation of sanctions, tariffs, or other trade tensions, stock, commodity, credit or asset valuations or volatility. The stock markets in general have experienced extreme volatility that has at times been unrelated to the operating performance of a particular company, and has in the past been impacted by the COVID-19 pandemic and global conflicts, and could in the future be impacted by geopolitical and other macroeconomic factors. These broad market fluctuations may adversely affect the trading price of our common stock. In addition, securities class action litigation is often brought against companies after periods of volatility in the market price of their securities, such as the securities class action filed in January 2025 asserting that statements we made in conjunction with our financial outlook from February 2024 to October 2024 were false or misleading, or failed to include material information (see Note 25 - Commitments and Contingencies of Notes to Consolidated Financial Statements in Part II, Item 8 of this Annual Report on Form 10-K for additional information regarding this class action law suit). We may in the future be the target of similar litigation which could result in substantial costs and divert management's attention and resources.

Newmont CHESS depositary interest ("CDIs") are quoted and trade on the ASX in Australian dollars, whereas Newmont common stock is quoted and trade on NYSE in US dollars. While Newmont CDI holders cannot directly trade the underlying Newmont

stock on the NYSE, they are entitled to transmute their Newmont CDIs into common stock. There is a risk that the liquidity in the market for Newmont CDIs reduces for a range of reasons including a reduction in the number of CDIs on issue due to the conversion of CDIs to Newmont common stock. Reduced liquidity in the market can impact the speed at which CDIs are able to be bought or sold and the price at which they trade. For a range of reasons, including liquidity, market sentiment and the AUD:USD exchange rate, there is potential CDIs may trade at a discount to our common stock trading on NYSE.

Newmont PETS depository interests ("PDIs") on PNGX have similar risks to Newmont CDIs as set out above. In addition, as PNG is a developing country, PNGX is a stock exchange located in an emerging market set within a dynamic political landscape. As a result of this, the PNGX and its listing rules may be liable to review and overhaul. This recently occurred with the introduction of a new suite of PNGX Listing Rules which came into effect on July 3, 2023. As the PNGX currently has only 11 companies listed, these new PNGX Listing Rules are largely yet to be tested in practice and, as the PNGX has complete discretion over any application for listing, a risk of uncertainty arises as to their application, particularly in respect of PDIs, as changes to the PNGX Business Rules addressing PDI's were not included in the recent suite of amendments.

In addition, it is possible that further changes to the PNGX Listing Rules or the PNGX Business Rules will be made in the future, either in respect of PDIs or more generally. Uncertainty created as a result of changing or untested PNGX Listing Rules or PNGX Business Rules may give rise to delays in actions sought to be taken by Newmont, by Newmont PDI holders, and any new compliance requirements may impact on the desirability of Newmont PDIs as a security.

The PNGX is a small market resulting in limited liquidity. Newmont does not know the extent to which investor interest will lead to the development of an active trading market for the Newmont PDIs or how liquid that market may become. There can be no guarantee that an active trading market for the Newmont PDIs will develop or that the price of the Newmont PDIs will increase. There may be relatively few potential buyers or sellers of the Newmont PDIs on the PNGX at any time. This may increase the volatility of the market price of the Newmont PDIs. It may also affect the prevailing market price at which stockholders are able to sell their Newmont PDIs. This may result in stockholders receiving a market price for their Newmont PDIs that is less than the price that the stockholder paid.

Holders of our common stock, CDIs and PDIs may not receive dividends.

Holders of our common stock (including those who hold Newmont CDIs and Newmont PDIs) are entitled to receive only such dividends as our Board of Directors may declare out of funds legally available for such payments. We are incorporated in Delaware and governed by the Delaware General Corporation Law. Delaware law allows a corporation to pay dividends only out of surplus, as determined under Delaware law or, if there is no surplus, out of net profits for the fiscal year in which the dividend was declared and for the preceding fiscal year. Under Delaware law, however, we cannot pay dividends out of net profits if, after we pay the dividend, our capital would be less than the capital represented by the outstanding stock of all classes having a preference upon the distribution of assets. Our ability to pay dividends will be determined based on Newmont's financial results, balance sheet strength, cash and liquidity requirements, future prospects, gold and commodity prices and other factors deemed relevant by our Board of Directors. Although we have historically declared cash dividends on our common stock, we are not required to declare cash dividends on our common stock (and, by extension, Newmont CDIs and PDIs). An annualized dividend payout level has not been declared by the Board of Directors, and the declaration and payment of future dividends, including future quarterly dividends, remains at the discretion of the Board of Directors. Our dividend framework is non-binding, and our Board of Directors may modify the dividend framework or reduce, defer or eliminate our common stock dividend in the future. A reduction or suspension in our dividend payments could have a negative effect on the price of our common stock.

Compliance with exchange listing rules as a foreign exempt listing may differ from investor expectations.

Newmont is subject to the listing standards of the NYSE, as its primary stock exchange. In addition, it is subject to additional requirements and standards of its secondary listings on the ASX, TSX and PNGX. For example, as part of Newmont's acquisition of Newcrest, Newmont was admitted to the Official List of ASX Limited as a foreign exempt listing. As a foreign exempt listing, Newmont is exempt from complying with substantially all of the ASX Listing Rules on the basis that Newmont must comply with the rules of its home exchange, the NYSE. ASX Listing Rules with regard to Foreign Exempt Listings which apply to Newmont include: (i) providing the ASX with copies of its public filings; (ii) continuing to comply with the NYSE Listing Rules; (iii) registering as a foreign company carrying on business in Australia under the Corporations Act; and (iv) complying with certain ASX Listing Rules concerning procedural and administrative matters, including lodging announcements, trading halt, suspension and removal. While a benefit of holding CDIs for Australian investors is that it enables trading of Newmont stock on the ASX (via a Newmont CDI), individual investors need to weigh this convenience with the risks inherent in trading CDIs on the ASX rather than the underlying stock on the NYSE, including the potential for delays in disclosure being released to the ASX and fluctuations in price due to trading in underlying Newmont common stock on the NYSE that occurs outside of the ASX trading hours (and which may be influenced by disclosures made outside of ASX trading hours). There may also be a commercial or other disadvantage to investors from the differing disclosure regimes and expectations, as between a stock with a primary listing on the ASX compared to a CDI that is underpinned by a stock with a primary listing on the NYSE. Accordingly, investors in Australia, Canada and PNG should be aware that under applicable listing rules, Newmont's disclosure obligations as a foreign exempt listing will differ from those of companies with a primary or non-exempt listing on ASX, TSX or PNGX, including without limitation, in connection with certain filing and distribution requirements, financial presentation requirements, and reserve and resource declaration requirements.

Risks Related to Assets Held for Sale and Divestitures

Assets held for sale may not ultimately be divested and we may not receive any or all deferred consideration.

Expectations regarding the planned divestment of assets held for sale are subject to risks and uncertainties. Based on a comprehensive review of the Company's portfolio of assets, the Company announced a portfolio optimization program to divest six non-core assets and a development project in February 2024. While the Company concluded that these non-core assets and the development project met the accounting requirements to be presented as assets held for sale, there is a possibility that these assets may not be sold for more than one year from the date management committed to sell them, or that they may not be sold at all, due to events or circumstances beyond the Company's control. No assurances can be provided with respect to the satisfaction of closing conditions, including but not limited to entering into transition service agreements, the timing of closing of the transactions or receipt of contingent consideration in the future. While the Telfer/Havieron sale has closed, the terms of the agreement included deferred contingent cash consideration of up to \$100. No assurance can be provided with respect to our receipt of such deferred consideration which may be payable to Newmont in cash through a gold price linked payment structure with a 50% price upside participation by Newmont in respect of gold produced from Havieron for five calendar years following the declaration of commercial production, subject to a hurdle gold price of \$1,850/oz. The closing of the Akyem sale transaction remains pending as of the date of this report and is subject to the satisfaction of certain customary conditions precedent, including but not limited to, the purchaser obtaining certain filings, approvals, or registrations. Similarly, receipt of \$900 in cash consideration for the Akyem sale transaction is subject to closing of the transaction, and an additional \$100 in cash consideration may be paid after the earliest to occur of the ratification of the currently renewed Akyem East and West mining leases by the Parliament of Ghana, or the five-year anniversary of the closing date. Additionally, the Akyem sale includes an indemnification in which the Company will indemnify the buyer for losses up to \$200 resulting from (i) non-ratification of the Akyem East and West mining leases by the Parliament of Ghana, for a five-year claim period; or (ii) government actions stopping operations within eight months of the transaction close. The purchase price payable at the closing is subject to adjustments for closing cash, working capital, inventory, finished goods inventory, and other customary purchase price adjustment items. The closing of the Musselwhite sale remains subject to no material adverse changes and completion of the pre-closing reorganization and key regulatory approvals, including the Canadian Competition Act. Similarly, receipt of \$810 in cash consideration for the Musselwhite sale transaction is subject to closing of the transaction, and an additional \$40 in cash consideration may be paid in two installments of \$20 at the one- and two-year anniversary of the closing date, subject to certain hurdle gold price of \$2,900/oz and \$3,000/oz, respectively. The purchase price payable at the closing is subject to adjustments for working capital, finished goods inventory, and other customary purchase price adjustment items. The closing of the Éléonore sale remains subject to no material adverse change and no transaction-related litigation, the completion of the pre-closing reorganization, and regulatory approvals, including the Canadian Competition Act. Similarly, receipt of \$795 in cash consideration for the Éléonore sale transaction is subject to closing of the transaction subject to adjustments for working capital, finished goods inventory, and other customary purchase price adjustment items. The closing of the CC&V sale remains subject to no material adverse change and no transaction-related litigation, the completion of the pre-closing reorganization, and regulatory approvals, including the Hart-Scott-Rodino Act review in the United States. Similarly, receipt of \$100 in cash consideration for the CC&V sale transaction is subject to closing of the transaction, and an additional \$175 in cash consideration may be paid in two equal installments upon certain regulatory approvals and finalization of remediation plans. Additionally, the CC&V sale includes an indemnification in which the Company will indemnify the buyer for 90% of closure costs over \$500 with an opportunity to eliminate via a one-time payment. The purchase price payable at the closing is subject to adjustments for working capital, finished goods inventory, and other customary purchase price adjustment items. No assurances can be provided with respect to the timing of closing for these pending sales, receipt of contingent consideration payments in the future, or adjustments due to indemnification requirements or liabilities.

The Company's asset divestitures place demands on the Company's management and resources, the sale of divested assets may not occur as planned or at all, and the Company may not realize the anticipated benefits of such divestitures.

The divestiture process involves numerous risks, including significant costs and expenses such as transaction-related fees and potential tax liabilities. If we are unable to complete divestitures on favorable terms, or at all, our business, financial condition, and results of operations could be materially and adversely affected. The anticipated benefits of these divestitures, such as cost savings, and productivity improvements, depend on the efficient and effective transition of operations from Newmont to the asset purchasers. In addition, certain closing conditions rely on performance by the purchaser or third parties including government agencies. No assurances can be provided that the necessary government approvals will be obtained on acceptable terms, or at all, or that the other closing conditions will be satisfied in a timely manner or at all.

Divestitures require the transition of systems and personnel, which may involve anticipated and unanticipated liabilities, costs, and the loss of key employees. Additionally, the transition process could disrupt existing relationships with suppliers, employees, customers, and other stakeholders. Demands will be placed on our managerial, operational, and financial personnel and systems to close these transactions, transition the assets, and provide transition services which may potentially extend for up to a year post closing. In the period between signing and closing, we are required to maintain an as-is state until transition. The resources required by the Company to effect and support the transition depend on the requirements of the purchaser. For example, we may be required to enter into transitional support agreements with the purchasers of these assets, which may require that we provide services and support in areas such as IT, procurement, human resources and finance. The transition process will likely involve, amongst other items,

transitioning contracts, licenses, software, and other physical assets, and assisting the purchasers in setting up system to be in a position to run the assets.

There can be no assurance that our systems, procedures, and controls will be adequate to support the transitional services and associated complexities. Challenges or delays in the successful transition of services could have an adverse effect on our operating results and financial condition. Certain closing conditions may require that the Company be liable for limited specific performance post-closing of the divested business or otherwise be exposed to greater-than-anticipated liabilities, including liabilities if a purchaser fails to honor its commitments. These factors may impact the value attributable to or derived from the divested business.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 1C. CYBERSECURITY

Risk Management and Strategy

We rely upon technology and information systems to support our mining and business operations globally. These systems may be susceptible to cybersecurity risks including, but not limited to, external attackers, malware, viruses, and unauthorized access to our IT systems. Cybersecurity and the secure adoption of emerging technologies, including artificial intelligence ("AI"), remain strategic priorities for Newmont. We continuously invest and develop our cybersecurity controls and processes to address these threats and reduce the risk of future breaches and cyber attacks. Risk associated with a cybersecurity incident, impacting our operations, has been integrated into our overall global risk management system and process. Our Board of Directors and management team oversee these risks as part of our enterprise risk management framework, ensuring alignment with our business objectives and regulatory obligations.

Foundationally, we seek to manage cyber risk through a structure of controls that includes cybersecurity standards, policies and cyber solutions that protect the availability, integrity, and confidentiality of our critical IT and mining systems. We monitor for emergent cyber threats and assess any actions required to reduce those risks. Our cybersecurity program is aligned to globally recognized security frameworks including the Mitre Att&ck Framework, NIST and ISO27001. We are currently certified compliant against ISO27001 and engage a certified audit firm to conduct annual control testing and reaffirm our certification. We further test our cybersecurity controls by engaging leading third-party cybersecurity service providers to perform external and internal penetration tests of critical business applications and mining system. Additionally, we review and tabletop test our incident response plan. We leverage continuous monitoring of our internet facing presence, as well as, known internet based criminal communities for mentions of Newmont, our executives, and employees. Our Security Operations Center ("SOC") continuously monitors for security events and threats, responding and escalating when appropriate. We also hold employee trainings on privacy and current cybersecurity topics, conduct phishing tests and generally seek to promote awareness of cybersecurity risk through communication and education of our employee population.

Newmont requires third parties that supply IT services, have access to Newmont systems, or manage Newmont data to adhere to established Newmont security policies. Additionally, Newmont requires that such third parties are required to provide detailed information on their established security controls via our third party risk assessment process. The third party risk assessment informs our contracting process. Specific certification may be required of critical third party IT service providers and partners. All third party workers are bound by our Acceptable Technology Use standard which governs appropriate IT systems access and usage.

Our operations rely on the secure processing, storage and transmission of confidential and other information in our computer systems and networks. Computer viruses, hackers, employee or vendor misconduct, and other external hazards could expose our information systems, and those of our vendors, to security breaches, cybersecurity incidents or other disruptions, any of which could materially and adversely affect our business. Cybersecurity incidents may also cause disruption to mining operations; critical financial or reporting systems impairment; breach or integrity loss of Newmont proprietary or confidential data; or external reputational damage.

The sophistication of cybersecurity threats, including through the use of AI, continues to increase, and the controls and preventative actions we take to reduce the risk of cybersecurity incidents and protect our systems, including the regular testing of our cybersecurity incident response plan, may become insufficient. In addition, new technology that could result in greater operational efficiency such as our use of AI, fleet electrification, and autonomous vehicles may further expose our operations and computer systems to the risk of cybersecurity incidents. Newmont did not identify any cybersecurity incidents during the year ended December 31, 2024 that have materially affected or are reasonably likely to materially affect Newmont's business strategy, results of operations, or financial condition.

Additional information about cybersecurity risks we face is discussed in Item 1A, Risk Factors of this report under the heading *"We are dependent upon information technology and operational technology systems, which are subject to disruption, damage, failure or cybersecurity attacks and risks associated with implementation, upgrade, operation and integration"* which should be read in conjunction with the information above.

Governance

As part of our overall risk management approach, we prioritize the identification and management of cybersecurity risk at several levels, including Board oversight, executive commitment and employee training. Our Audit Committee, comprised of independent directors from our Board, oversees the responsibilities relating to the operational (including information technology ("IT") risks and data security) risk affairs of the Company. Our Audit Committee is informed of such risks through quarterly reports from our cybersecurity leadership and it reports any material findings and recommendations to the full Board for consideration.

Our Cybersecurity team, comprised of seasoned IT and cybersecurity members, has decades of experience across multiple technical and compliance disciplines including cyber incident response, forensics, IT compliance, incident recovery, threat investigation and information technology. Our cybersecurity team includes several individuals who hold industry recognized certifications and advanced degrees in cybersecurity. Cybersecurity oversees the implementation and compliance of our information security standards, information technology compliance, and mitigation of information security related risks. The Chief Technology Officer and Chief Information Officer have direct oversight of the cybersecurity function. We also have management level committees, leaders, and a cybersecurity incident team who support our processes to assess and manage cybersecurity risk as follows:

- The head of privacy, in conjunction with the cybersecurity leadership assists on identification and mitigation of privacy related risks across the enterprise. This combination brings together legal, compliance and other function leads as required.
- The Cybersecurity Disclosure Steering Committee, comprised of leadership from IT, cybersecurity, operations, risk, finance, legal and compliance across business segments, contributes to the assessment of cybersecurity breach, planned response, and required disclosures and filings.
- The Rapid Response Team, which includes senior executives across the Company and its global operations, is alerted as appropriate to cybersecurity incidents, natural disasters and business outages. The Rapid Response Team performs tabletop exercises on a yearly basis with inclusion across functions.

Each of these committees provides summary reports on their activities, which is then communicated as appropriate to the Audit Committee.

ITEM 2. PROPERTIES (dollars in millions, except per share, per ounce and per pound amounts)

Newmont's production, development, and exploration properties are described below. All key permits have either been obtained by Newmont or approval is expected to be received in the normal course of business. The Company maintains its corporate headquarters in Denver, Colorado, U.S. and has various regional offices. In addition, Newmont holds investment interests in Canada, Mexico, Chile, Argentina, and various other locations. Refer to Item 1A, Risk Factors, for risks related to our properties.

Operating Statistics, Proven and Probable Reserves, and Measured, Indicated and Inferred Resources contain tabular information that is presented in both metric and imperial as follows: (i) metric tonnage is utilized for all metals; (ii) gold and silver grades are presented in grams per tonne; (iii) copper, lead, zinc, molybdenum, and tungsten grades are presented in percentages; and (iv) metal content for gold and silver is presented in ounces while metal content for copper, lead, zinc, molybdenum, and tungsten is presented in pounds or tonnes. Refer to Operating Statistics, Proven and Probable Reserves, and Measured, Indicated and Inferred Resources below.

Production Properties

Newmont's properties described below are in the production stage and are operated by Newmont, unless otherwise noted. Production and other operating statistics are presented below in the Operating Statistics section for each site. At December 31, 2024, the Peñasquito, Boddington, Cadia, Lihir, and NGM properties are classified as material individual properties under Regulation S-K 1300 and additional details are provided for these properties accordingly.

Brucejack, Canada. (100% owned) Brucejack, located in western British Columbia, approximately 40 miles (65 kilometers) north of Stewart and 28 miles (45 kilometers) southwest of the Stewart-Cassiar Highway 37, is an underground operation. The Brucejack operation comprises four mining leases and six core mineral claims which cover 8,169 acres (3,306 hectares) and 337 mineral claims covering 298,795 acres (120,918 hectares). The mining leases expire in 2045. Brucejack is a deformed, porphyry-related transitional to intermediate sulphidation epithermal high-grade gold-silver deposit. Gold is hosted in quartz-calcite vein stockworks, sheeted veins and veinlets and can also be associated with arsenian pyrite. Process facilities include a mill building containing process equipment, including a rock bin, SAG mill-ball mill circuit followed by conventional flotation, concentrate dewatering, concentrate load-out and tailings dewater operations, a water treatment plant, a paste backfill plant, and a metallurgical laboratory. The mining fleet includes a fleet of load-haul-dump vehicles, trucks for material loading and transport to surface, excavators, bolters, shotcrete sprayers, long-hole drills, and cable bolters. Brucejack's gross property, plant and mine development at December 31, 2024 was \$2,105. Brucejack reported 1.9 million ounces of gold reserves at December 31, 2024.

Red Chris, Canada. (70% owned) Red Chris is 70% owned by Newcrest Red Chris Mining Limited, a Newmont subsidiary, and 30% owned by Red Chris Development Company Ltd., an Imperial Metals subsidiary, and is accounted for under proportionate consolidation. Red Chris is located in northwest British Columbia, Canada, approximately 11 miles (18 kilometers) southeast of the Iskut village, 50 miles (80 kilometers) south of Dease Lake, and 7 miles (12 kilometers) east of the Stewart-Cassiar Highway 37. The Red Chris operation is comprised of five mining leases which cover 12,703 acres (5,141 hectares) and 199 mineral claims, encompassing an area of approximately 164,903 acres (66,734 hectares). The mining leases expire in 2042. Red Chris is a copper-gold open pit mining operation. Newmont is conducting a feasibility study on a potential underground block cave mine, and has commenced an exploration decline. Gold and copper porphyry-style mineralization consists of vein, disseminated and breccia sulfides. The main sulfide mineral

assemblage is pyrite-chalcopyrite-bornite. Ore from the mine is fed to a primary crusher with crushed ore conveyed to a coarse ore stockpile. From there ore is reclaimed and fed to a conventional SAG mill–ball mill–pebble crushing comminution circuit which in turn feeds a flotation circuit. Flotation concentrate is dewatered and loaded into trucks for transportation off-site. The processing facilities are housed in a single process building. Additional to crushing and processing are waste rock storage facilities, a tailings storage facility, water treatment facilities, and waste treatment facilities. The available fleet consists of three face shovels, five drills, 22 trucks (dump and water trucks), three graders, one PC2000 excavator, five-non-production excavators, two mini excavators, ten loaders, and nine dozers. Red Chris's gross property, plant and mine development at December 31, 2024 was \$1,967. Red Chris reported 3.7 million ounces of gold reserves and 1.0 million tonnes of copper reserves at December 31, 2024.

Peñasquito, Mexico. (100% owned) Peñasquito is an open pit operation located in the northeast corner of Zacatecas State, approximately 125 miles (200 kilometers) northeast of the city of Zacatecas and is accessible by paved roads with a private airport close to the site. The property began production in 2009, with commercial production being achieved in 2010. Goldcorp, Inc. ("Goldcorp") acquired its ownership in the mine in 2006 when it acquired Glamis. In 2019, Newmont acquired Goldcorp, obtaining full ownership interest in Peñasquito. Peñasquito consists of the Peñasco and Chile Colorado open pit mines.

Peñasquito is comprised of 20 mining concessions for operations comprising 113,231 acres (45,823 hectares) and 60 mining concessions for exploration of 107,456 acres (43,486 hectares). Surface rights in the vicinity of the Peñasco and Chile Colorado open pits are held by three ejidos: Ejido Cedros, Ejido Mazapil and Ejido Cerro Gordo. Peñasquito has signed land use agreements with each ejidos, valid through 2035 and 2036, and the relevant private owners.

In January 2011, Peñasquito entered into a 20-year power delivery agreement with a subsidiary of InterGen Servicios Mexico (now Saavi Energia) where Peñasquito agreed to purchase electrical power from a gas-fired electricity generating facility located near San Luis de la Paz, Guanajuato, Mexico. The agreement commenced in August 2015. Power is also supplied by the Mexican Electricity Federal Commission (Comision Federal de Electricidad) at its central power grid through the El Salero-Peñasquito powerline.

In August 2020, the Company and Cedros General Assembly ratified the definitive agreement that was reached on April 22, 2020 and resolved all outstanding disputes between Peñasquito and the San Juan de Cedros community (Cedros). In addition, easements have been granted in association with the La Pardita-Cedros Highway and the El Salero-Peñasquito powerline. All necessary permits have been granted.

In July 2007, Goldcorp and Wheaton Precious Metals Corp. (then Silver Wheaton Corp.) entered into a silver streaming agreement. The Company is obligated to sell 25% of silver production from the Peñasquito mine to Wheaton Precious Metals Corporation at the lesser of market price or a fixed contract price, subject to an annual inflation adjustment of up to 1.65%. Refer to Note 5 to the Consolidated Financial Statements for further information.

A 2% net smelter return royalty is owed to Royal Gold Inc. from both the Chile Colorado and Peñasco open pits of the Peñasquito mine. Since January 1, 2014, the Mexican Government levies a 7.5% mining royalty that is imposed on earnings before interest, taxes, depreciation, and amortization. There is also a 0.5% environmental erosion fee payable on precious metal production, based on revenues. In December 2016, the State of Zacatecas in Mexico approved new environmental taxes ("Ecological Taxes") that became effective January 1, 2017. The Ecological Taxes are calculated based on a predetermined formula and the volume of carbon emissions, as well as other environmental variables, at Peñasquito. The Company's payment of the Ecological Taxes primarily relates to the volume of carbon emissions at Peñasquito from fixed and mobile sources.

The mineralization at Peñasquito contains gold, silver, lead and zinc. Deposits currently mined within the Peñasquito operations are considered to be examples of breccia pipes developed as a result of intrusion-related hydrothermal activity.

Process facilities include a sulfide processing plant, comprising two stages of flotation: lead and zinc. In the lead and zinc flotation, the slurry is conditioned with reagents to activate the desired minerals and produce lead and zinc concentrates. The flotation tailings go for final deposition in the tailings storage facility. The available mining fleet consists of five rope shovels, three hydraulic shovels, four loaders, and 81 haul trucks, each with a 312-tonne payload. The fleet is supported by blast hole production drills, as well as track dozers, rubber tire dozers, excavators, and graders. Peñasquito's gross property, plant and mine development at December 31, 2024 was \$5,625.

As of December 31, 2024 and 2023, Peñasquito reported 4.1 million and 4.6 million ounces of gold reserves, respectively, 253.3 million ounces and 312.6 million of silver reserves, respectively, 0.8 million and 0.9 million tonnes of lead reserves, respectively, and 1.7 million and 2.2 million tonnes of zinc reserves, respectively. These changes represent a decrease of approximately 11% in gold

reserves, a decrease of approximately 19% in silver reserves, a decrease of approximately 11% in lead reserves, and a decrease of approximately 23% in zinc reserves in 2024 compared to 2023. The overall reduction in reserves is primarily due to depletion.

As of December 31, 2024 and 2023, Peñasquito reported 1.7 million and 1.5 million ounces of gold resources, respectively, 189.6 million ounces and 175.2 million of silver resources, respectively, 0.5 million and 0.6 million tonnes of lead resources, respectively, and 1.3 million and 1.3 million tonnes of zinc resources, respectively. These changes represent an increase of approximately 13% in gold resources, an increase of approximately 8% in silver resources, and a decrease of approximately 17% in lead resources, while zinc resources remained consistent in 2024 compared to 2023. The increase in gold resources is primarily due to net positive revisions.

Brownfield exploration and development for new reserves is ongoing.

Merian, Suriname. (75% owned) Merian is owned 75% by Newmont Suriname, LLC ("Newmont Suriname") (formerly known as Suriname Gold Company LLC and 100% indirectly owned by Newmont Corporation) and 25% by Staatsolie Maatschappij Suriname N.V. ("Staatsolie," a company wholly owned by the Republic of Suriname). Merian is located in Suriname, approximately 40 miles (66 kilometers) south of the town of Moengo and 19 miles (30 kilometers) north of the Nassau Mountains, close to the French Guiana border. The Merian operation is comprised of one Right of Exploitation encompassing an area of 41,687 acres (16,870 hectares) and four Rights of Exploration encompassing an area of 132,532 acres (53,634 hectares). All of the gold mineralization at Merian is closely associated with quartz veining within siltstone and sandstone formations. The operation currently includes the Merian 2 open pit, the Merian 1 open pit, the Maraba open pit, and the Kupari open pit. The available mining fleet consists of three shovels, three mining excavators, and 41 haul trucks, each with 150-tonne payload. Merian includes processing facilities that utilize a conventional gold mill, primary crusher and processing plant, consisting of a comminution plant, including gravity and cyanide leach processes, with recovery by carbon-in-leach, elution, electrowinning and induction furnace smelting to produce a gold doré product. Merian's gross property, plant and mine development at December 31, 2024 was \$1,355. Merian reported 4.1 million attributable ounces of gold reserves at December 31, 2024.

Brownfield exploration and development for new reserves is ongoing.

Cerro Negro, Argentina. (100% owned) Cerro Negro is located in southern Argentina about 250 miles (400 kilometers) southwest of the coastal city of Comodoro Rivadavia. The mineral tenure consists of ten mining property titles encompassing 53,246 acres (21,548 hectares), and three exploration licenses, encompassing 13,193 acres (5,339 hectares). We also own lands in the Cerro Negro mine area, totaling approximately 27,429 acres (11,100 hectares), which overlie the Bajo Negro and Vein Zone deposits and adjacent prospects. Cerro Negro consists of the Eureka, Mariana Central, Mariana Norte, Emilia, and San Marcos operating underground mines and the Baja Negro and Silica Cap underground mines, which are currently in development. Deposits within the Cerro Negro mine operations are low sulfidation, epithermal gold/silver vein deposits. Cerro Negro's available underground mining fleet consists of nine underground loaders, 12 underground haul trucks, and six surface haul trucks, each with 30 to 40-tonne payloads and additional auxiliary equipment as required. The processing plant facilities consist of a crushing plant, a grinding circuit, agitated leaching, counter-current decantation, solution clarification, Merrill Crowe zinc precipitation and smelting to produce gold and silver doré bars that are shipped to a refinery for further processing. Cerro Negro's gross property, plant and mine development at December 31, 2024 was \$2,302. Cerro Negro reported 3.2 million ounces of gold reserves at December 31, 2024.

Brownfield exploration and development for new reserves is ongoing, including the development of the Eastern district.

Yanacocha, Peru. (100% owned) Yanacocha is located approximately 375 miles (604 kilometers) north of Lima and 30 miles (48 kilometers) north of the city of Cajamarca. Yanacocha is comprised of 12 mining concessions encompassing 237,740 acres (96,210 hectares). Yanacocha is an epithermal type deposit of high sulfidation hosted in volcanic rock formations. Gold is associated with iron-oxides and pyrite, which is placed on leach pads. Yanacocha consists of the following open pit mines: the La Quinua Complex, the Yanacocha Complex, the Carachugo Complex, and Maqui Maqui. Yanacocha has four leach pads (La Quinua, Yanacocha, Carachugo and Maqui Maqui), with leaching operations at La Quinua and Carachugo. Yanacocha also has three gold processing plants (Pampa Larga, Yanacocha Norte and La Quinua), one limestone processing facility (China Linda) and one mill (Yanacocha Gold Mill). The La Quinua Complex mined material from the La Quinua Sur and the Tapado Oeste Layback and finished mining operations in 2021. The Yanacocha Complex mined material from the Yanacocha Layback and Yanacocha Pinos has had limited mining operations in recent years. The Maqui Maqui operations mined material from multiple mines that are no longer in operation. The Yanacocha Gold Mill ceased current operations in February 2021 and has been placed into care and maintenance. It will be repurposed for use as part of the Yanacocha Sulfides project. The Carachugo leach pad processes oxide material from Quecher Main. Yanacocha's available mining fleet consists of two shovels, four excavators, and 25 haul trucks, each with 233-tonne payload. Yanacocha's gross property, plant and mine development at December 31, 2024 was \$5,886. Yanacocha reported 5.3 million ounces of gold reserves at December 31, 2024.

Pueblo Viejo, Dominican Republic. (40% owned) Pueblo Viejo is a joint venture with Barrick Gold Corporation ("Barrick"), where Barrick is the operator who holds the remaining 60% interest. We report our interest in Pueblo Viejo on an equity method basis. The Pueblo Viejo mine is an open pit conventional truck and shovel mining operation located approximately 60 miles (100 kilometers) northwest of Santo Domingo, Dominican Republic. The Pueblo Viejo mine is situated on the Montenegro Fiscal Reserve, an area specially designated by Presidential Decree for the leasing of minerals and mine development, which covers an area of approximately 19,756 acres (7,995 hectares) in aggregate. The Pueblo Viejo deposits are located in two major areas, the Monte Negro pit and the

Moore pit, and consists of high sulfidation or acid sulfate epithermal gold, silver, copper and zinc mineralization. Process facilities include a conventional mill which consists of a crushing and grinding circuit, autoclaves, and a carbon-in-leach circuit. The plant expansion project is nearing completion and adds a new crusher, SAG mill, carbon-in-leach circuit and a flotation circuit. The tailings storage facility continues to advance. The plant expansion and tailings storage facility are designed to extend its life to 2040 and beyond. The available mining fleet consists of three shovels, five front loaders, 46 haul trucks, each with an average payload of 185 tonnes, and seven drills. The Company's attributable portion of Pueblo Viejo's gross property, plant and mine development is \$2,968 at December 31, 2024. We report our 40% interest in Pueblo Viejo on an equity method basis under U.S. GAAP and as a result our attributable portion of Pueblo Viejo's gross property, plant and mine development is included in the carrying value of our equity method investment at December 31, 2024. As of December 31, 2024, Pueblo Viejo reported 8.2 million ounces of attributable gold reserves and 48.9 million ounces of attributable silver reserves.

Boddington and Tanami, Australia. Newmont's Boddington and Tanami operations in Australia take place on land that falls under the custodianship of Aboriginal people. Aboriginal land rights in Australia, which recognize the traditional rights and customs of Aboriginal people, are governed by the Commonwealth Native Title Act and certain other Acts specific to individual states and territories. The Commonwealth Native Title Act was enacted in 1993 following a decision in the High Court of Australia, which held that Aboriginal people, who have maintained a continuing connection with their land according to their traditional laws and customs, may hold certain rights which should be recognized under Australian common law. In the Northern Territory, where the Tanami operation is located, the Aboriginal Land Rights Act ("ALRA") was introduced in 1976, which established an Aboriginal Land rights regime. Under the ALRA, approximately 50% of the land in the Northern Territory was granted as inalienable Aboriginal freehold titled land.

Newmont has existing agreements with the Traditional Owner groups of the land utilized by our Tanami and Boddington operations. Any future agreements would depend on a determination of native title, which is likely to take many years. If successful, a native title determination could give rights to compensation claims in the future. Throughout Australia, new exploratory and mining tenements may require native title agreements to be entered into and will be subject to a negotiation process, which often gives rise to compensation payments and heritage survey protocols. Newmont does not consider that native title claims or determined areas where rights have been established are an impediment to the operation of existing mines.

In Australia, various ad valorem royalties and taxes are paid to state and territorial governments, typically based on a percentage of gross revenues or earnings. Aboriginal groups have negotiated compensation/royalty payments as a condition to granting access to areas where native title rights are determined or where they own the land.

Boddington, Australia. (100% owned) Boddington is located 81 miles (130 kilometers) southeast of Perth in Western Australia and is accessible primarily by paved road. Boddington has been wholly owned since June 2009 when Newmont acquired the final 33.33% interest from AngloGold Ashanti Australia Limited.

The Boddington project area comprises 52,045 acres (21,062 hectares) of mining tenure leased from the State of Western Australia, of which 26,910 acres (10,890 hectares) is subleased from the South 32 Worsley Joint Venturers ("Worsley JV"). The total project area is comprised of multiple leases that expire between 2025 and 2043. Royalties are paid to the state government at 2.5% for gold and 5% for copper based on revenue. Shipping and treatment and refining costs are allowable deductions from revenue for royalty calculations for copper. Newmont owns 74,354 acres (30,090 hectares) of rural freehold property, some of which overlaps existing mining tenure. The majority of its current operational area is located on its freehold property.

The subleases from the Worsley JV expire immediately prior to the expiry of the relevant mining leases. Newmont holds rights to renew the subleases. The mining leases are renewable upon application to the State of Western Australia by the Worsley JV. As these mining leases are in their third term, renewal of these mining leases is at the discretion of the State. The subleases do not confer an express right to require the Worsley JV to seek application to renew the mining leases. Newmont is entitled to all gold and other non-bauxite mineralization conferred by the mining leases. The Worsley JV retains the rights to bauxite mineralization. The relationship between the Worsley JV bauxite operations and the Boddington gold operations are regulated through a cross-operation agreement. This agreement confers priority on the bauxite operations such that the bauxite/alumina mining operations of the Worsley JV will take priority over the gold mining operations and Newmont is required to take reasonable measures to conserve bauxite including by mining and stockpiling bauxite on behalf of the Worsley JV.

Boddington consists of greenstone diorite hosted mineralization and exploration activities continue to develop the known reserve. The mine operates two pits (North and South Pits), utilizing two electric shovels, a diesel powered face shovel and two excavators as its prime ex-pit material movers with a fleet of 41 production autonomous haulage trucks. Boddington has a current capacity to mine approximately 175,000 to 225,000 tonnes of material per day. The milling plant includes a three-stage crushing facility

(two primary crushers, six secondary crushers and four high-pressure grinding rolls), four ball mills, a flotation circuit and a carbon-in-leach circuit. The flotation circuit process recovers gold-copper concentrate before the material is then processed by a traditional carbon-in-leach circuit where the remaining gold is recovered to produce doré. Mining operations consist of two open pit operations located adjacent to each other.

Power for the operation is sourced through the local power grid under a long-term power purchase agreement with Bluewaters Power. The power supply contract with Bluewaters expires in 2026 and includes an option to extend.

Boddington's gross property, plant and mine development at December 31, 2024 was \$4,879.

As of December 31, 2024 and 2023, Boddington reported 10.8 million and 9.6 million ounces of gold reserves, respectively, and 0.5 million and 0.5 million tonnes of copper reserves, respectively. These changes represent an increase of approximately 13% in gold reserves, while copper reserves remained consistent in 2024 compared to 2023. The increase in gold reserves is primarily due to net positive technical revisions.

As of December 31, 2024 and 2023, Boddington reported 4.3 million and 4.7 million ounces of gold resources, respectively, and 0.3 million and 0.3 million tonnes of copper resources, respectively. The gold resources decreased approximately 9% and the copper resources remained consistent in 2024 compared to 2023. The decrease in gold resources is primarily due to conversion to reserves, partially offset by positive technical revisions.

Brownfield exploration and development for new reserves is ongoing.

Tanami, Australia. (100% owned) Tanami is located in the Northern Territory approximately 342 miles (550 kilometers) northwest of Alice Springs. The underground mining infrastructure and operation is located at Dead Bullock Soak ("DBS"). The processing infrastructure is located 25 miles (40 kilometers) to the east of the mining operations at the Granites. Ore is transported by road train from DBS underground to the processing facility at the Granites.

The Newmont Tanami Operations are comprised of exploration licenses encompassing a total area of 1,540,301 acres (623,338 hectares) including 556,545 acres (225,226 hectares) relating to the Tobruk and Monza Joint Ventures entered into with Prodigy Gold, and 44,333 acres (17,941 hectares) relating to a Joint Venture entered into with Top End Exploration Pty Ltd, for which Newmont is the operator, and 11,025 acres (4,462 hectares) of mineral leases granted pursuant to the Northern Territory Mineral Titles Act. Additionally, Newmont operates through exploration and mining agreements with the Central Land Council who represent Traditional Owners, the Warlpiri people.

Tanami consists of sediment hosted sheeted quartz vein mineralization. Tanami, as an underground mining operation, has a fleet of ten underground loaders, 22 haul trucks, each with 60 to 65-tonne payloads, and one ejector truck with a 45 tonne capacity. Processing plant facilities currently consist of a crushing plant, a grinding circuit, a gravity circuit, carbon in pulp tanks and a conventional tailings disposal facility. Tanami's gross property, plant and mine development at December 31, 2024 was \$3,401. Tanami reported 5.1 million ounces of gold reserves at December 31, 2024.

Brownfield exploration and development for new reserves is ongoing with the main focus being underground ore definition drilling of the Auron, Federation and Liberator ore bodies as well as exploration of the Oberon deposit.

Cadia, Australia. (100% owned) Cadia is located approximately 16 miles (25 kilometers) south-southwest of the town of Orange in New South Wales ("NSW") and is accessible primarily by paved roads and through the Orange airport located approximately 8 miles (13 kilometers) northeast of the Cadia Operations. The Cadia Operations consist of six granted mining leases and five granted exploration licenses through NSW encompassing a total area of 53,128 acres (21,500 hectares). Newmont predominantly owns all properties covered by the mining leases and a number of properties in the surrounding area. The main mining lease expires in October 2038 but can be renewed. Newcrest acquired the Cadia mine in 1991. Newmont obtained the 100% ownership of Cadia when Newmont acquired Newcrest in 2023.

Cadia consists of the Cadia East, Cadia Hill, Cadia Extended, and Ridgeway deposits which consist of alkalic porphyry gold-copper style mineralization and the Big Cadia deposit which is a skarn-style occurrence.

The NSW government levies a royalty rate of 4% for gold, silver, copper, and molybdenum based on revenue. Treatment costs, depreciation, realization, and administration costs are allowable deductions from revenue for royalty calculations.

Cadia operates two adjacent concentrators, Concentrator 1 and Concentrator 2, currently treating ore from Cadia East mine. Both concentrators have undergone throughput upgrades, including operational improvements, over the years. Water supply at Cadia is sourced from the Cadiangullong Dam, Upper Rodds Creek Dam, Flyers Creek Weir, Cadia Creek Weir, Orange Sewage Treatment Plant

treated effluent, on-site groundwater bores, Belubula River, and site runoff. Cadia sources all of its power from the National Electricity Market. Cadia is currently under an electricity supply agreement and holds a power purchase agreement.

Production mining is an underground panel cave mining from Cadia East with underground crushing and conveyor to surface. The processing plant infrastructure includes high pressure grinding rolls, SAG mills, ball mills, flotation, coarse ore flotation, gravity concentrator and a molybdenum plant to produce copper and gold concentrate, gold doré, and molybdenum concentrate. The available primary production fleet consists of 26 underground production loaders with an average 19 tonne payload. Cadia's gross property, plant and mine development at December 31, 2024 was \$5,735.

As of December 31, 2024 and 2023, Cadia reported 14.1 million and 14.7 million ounces of gold reserves, respectively, 3.1 million and 3.2 million tonnes of copper reserves, respectively, 22.8 million and 24.0 million ounces of silver reserves, respectively and 0.1 million and 0.1 million tonnes of molybdenum reserves, respectively. These changes represent a decrease of approximately 4% in gold reserves, a decrease of approximately 3% in copper reserves, a decrease of approximately 5% in silver reserves in 2024 compared to 2023. Molybdenum reserves remained consistent. The overall reduction in reserves is primarily due to depletion.

As of December 31, 2024 and 2023, Cadia reported 19.5 million and 20.6 million ounces of gold resources, 4.2 million and 4.7 million tonnes of copper resources, 34.0 million and 38.8 million ounces of silver resources, and 0.1 million and 0.1 million tonnes of molybdenum resources. These changes represent a decrease of approximately 5% in gold resources, a decrease of approximately 11% in copper resources, and a decrease of approximately 12% in silver resources in 2024 compared to 2023. Molybdenum resources remained consistent. The overall reduction in resources is primarily due to negative technical revisions.

Lihir, Papua New Guinea. (100% owned) Lihir is an open pit mine located near the town of Londolovit on Aniolum Island, approximately 560 miles (900 kilometers) northeast of Port Moresby, the national capital. Access to Aniolum Island is through the Kunaye airport located approximately 4 miles (7 kilometers) north of the mine. Newcrest acquired the Lihir mine in 2010. Newmont obtained the 100% ownership of Lihir when Newmont acquired Newcrest in 2023.

The Lihir deposit is considered to be an example of an epithermal gold deposit. Lihir Island is part of a 155 mile (250-kilometers) long, northwest-trending, alkalic volcanic island chain that sits within an area where several micro-plates (Solomon Sea Plate, South Bismarck Plate and North Bismarck Plate) developed between the converging Australian and South Pacific plates. Lihir Island comprises two Plio-Pleistocene volcanic blocks, Londolovit Block and Wurtol Wedge and three Pleistocene volcanic edifices, Huniho, Kinami, and Luise.

Lihir consists of a granted Special Mining Lease, two granted Mining Leases, one granted Exploration License, five granted Leases for Mining Purposes, and three Mining Easements held in the name of Lihir Gold. The total area under license is approximately 63,506 acres (25,700 hectares). Lihir is situated on land held variously under customary, State of PNG, and private ownership, including under State of PNG lease. The bulk of the land that is or will be affected by development, operations and closure of the Lihir Operations is customary owned. Newmont has been granted rights to undertake mining and processing of gold and related activities, through negotiations with the state and local government, and landowners in the area. Environment Permits for water extraction and waste disposal are in place to support mining operations. The Londolovit River is the main source of water for the process plant and surrounding area.

A 2% royalty is payable to the State on the realized prices of all gold and silver bullion sold, less transport and refining costs. In addition, a production levy of 0.5% is also payable to the PNG Mineral Resource Authority on the gross income from the sale of the minerals (i.e., excluding the offsets of treatment and refining charges, payable terms and freight) and other income derived from or in connection with the mining operations.

Operations at Lihir are conducted using a fleet of nine hydraulic shovels and 49 haul trucks, with payload ranging from 90 to 131-tonnes. The process plant consists of crushing and grinding followed by bulk sulphide flotation, pressure oxidation, and recovery of gold from washed oxidized slurry using conventional cyanidation. For tailings management, Lihir utilizes deep-sea tailings placement in a suitable deep-ocean location. The plant has undergone a number of alterations and expansions since first commissioning in 1997. Lihir's gross property, plant and mine development at December 31, 2024 was \$3,874.

As of December 31, 2024 and 2023, Lihir reported 15.8 million and 17.5 million ounces of gold reserves, respectively. This change represents a decrease of approximately 10% in gold reserves in 2024 compared to 2023. The decrease in gold reserves is primarily due to depletion and negative technical revisions.

As of December 31, 2024 and 2023, Lihir reported 20.4 million and 20.2 million ounces of gold resources, respectively. The gold resources remained consistent in 2024 compared to 2023.

Ahafo, Ghana. (100% owned) Our current Ahafo operation ("Ahafo South") is located near Kenyasi in the Ahafo Region of Ghana, approximately 180 miles (290 kilometers) northwest of the national capital city of Accra. The Ahafo South operations are comprised of three mining leases issued under the Ghanaian Mining Act encompassing a total area of approximately 137,000 acres (55,000 hectares) with current mine take area of approximately 13,200 acres (5,300 hectares) that has been fully compensated and approximately 10,700 acres (4,300 hectares) of mining area that has not been fully compensated (e.g. payment would be necessary to move people from their land). The mining leases grant the exclusive rights to work, develop and produce gold in the lease area, including the processing, storing and transportation of mineral and materials. The mining leases require Ahafo South to respect or perform certain financial and statutory reporting obligations and expire in 2031 and are renewable subject to certain conditions.

The Ahafo South mine is composed of three orogenic gold deposits that have oxide and primary mineralization. Gold occurs primarily in pyrite and secondarily as native gold in quartz veins. Ahafo South has two active open pits, Subika and Awonsu. Subika added an underground operation, which reached commercial production in November 2018, and Awonsu completed a layback in November 2019. The available mining fleet for surface mining consists of three shovels and 36 haul trucks, each with 141-tonne payload. The available mining fleet for underground mining consists of eight underground loaders and 14 haul trucks, with payload ranging from 55 to 57-tonnes. The daily production rate is approximately 88,000 tonnes. The original processing plant was commissioned in 2006. The Ahafo Mill Expansion, which was completed in October 2019, expanded the plant capacity to process approximately 11 million tonnes per year. The current processing plant consists of two crushing plants, two grinding circuits, carbon-in-leach circuits, elution circuit, counter current decantation circuit, a tailings disposal facility, and a reverse osmosis water treatment plant. Ahafo South's gross property, plant and mine development at December 31, 2024 was \$2,938. As of December 31, 2024 Ahafo South reported 4.6 million ounces of gold reserves.

Brownfield exploration and development for new reserves is ongoing.

NGM, Nevada, U.S. (38.5% owned) NGM is located in Elko, Nevada. On July 1, 2019, Newmont and Barrick consummated the Nevada JV Agreement, which combined the Company's Nevada mining operations with Barrick's Nevada mining operations resulting in the establishment of NGM, a joint venture with Barrick, who is the operator, and which is accounted for by the Company under proportionate consolidation. NGM operations are primarily accessible by paved road and are comprised of 180,921 acres (73,217 hectares) in aggregate including Cortez 53,999 acres (21,853 hectares), Carlin 58,255 acres (23,575 hectares), Turquoise Ridge 26,679 acres (10,797 hectares), Phoenix 17,900 acres (7,244 hectares), and Long Canyon 24,088 acres (9,748 hectares).

All sites at NGM contain open pit operations while Cortez, Carlin, and Turquoise Ridge also include underground operations. At Cortez, mineralization is sedimentary rock-hosted and consists of submicron to micrometer-sized gold particles and gold in solid solution in pyrite. Refractory ore is transported to Carlin for processing. Phoenix is a skarn-hosted polymetallic massive sulfide replacement deposit. The Phoenix mill produces a gravity gold concentrate and a copper/gold flotation concentrate and recovers additional gold from cyanide leaching of the flotation tails. Carlin, Turquoise Ridge, and Long Canyon are a sediment-hosted disseminated gold deposit. Additionally, at Long Canyon, oxide ore with suitable cyanide solubility is treated on a heap leach pad. Gold recovered from the leach pad is transferred as gold-bearing carbon to Carlin for refining and shipment.

In Nevada, mining taxes are assessed on up to 5% of net proceeds of a mine. During 2021, the Nevada legislature enacted a new excise tax which is assessed up to 1.1% of gross revenues.

NGM owns, or controls through leases, fee ownership, and unpatented mining claims, all of the minerals and surface area within the boundaries of the present Nevada mining operations. The long-term leases extend for at least the anticipated mine life of those deposits. With respect to a significant portion of the Gold Quarry mine at Carlin, NGM pays a net smelter royalty equivalent to 16.2% of the mineral production. NGM wholly-owns or controls the remainder of the Gold Quarry mineral rights, in some cases subject to additional royalties. With respect to certain smaller deposits in Nevada, NGM is obligated to pay royalties on production to third parties that vary from 1% to 8% of production.

Each site has its own process facilities which include: an oxide mill, which consists of a crushing and grinding circuit and carbon-in-leach circuit, and two heap leach pads at Cortez; an autoclave, two roasters, an oxide mill/flotation circuit and three heap leach pads at Carlin; the Sage autoclave, an oxide mill, and three heap leach pads at Turquoise Ridge; a flotation mill, a carbon-in-leach plant, a copper leach pad and a solvent extraction electrowinning ("SX/EW") plant at Phoenix; and a heap leach pad at Long Canyon. NGM has a current capacity across all sites to mine approximately 267,000 tonnes of material per day. The milling facilities were commissioned over a range of years beginning in the 1990's. They undergo routine maintenance each year with process improvements implemented as the projects are identified and approved. Power is either purchased in the open market or supplied by the power plants owned and operated by NGM.

The NGM operations include, in aggregate, an open pit mining fleet consisting of 27 shovels and 142 haul trucks with an average payload of 272 tonnes, and an underground mining fleet consisting of 55 underground loaders and 87 haul trucks, with an average payload of 35 tonnes. Newmont's share of NGM's gross property, plant and mine development at December 31, 2024 was \$8,894.

As of December 31, 2024 and 2023, NGM reported 17.9 million and 18.3 million attributable ounces of gold reserves, respectively, 0.1 million and 0.1 million tonnes of copper reserves, respectively, and 14.5 million and 14.2 million ounces of silver reserves, respectively. These changes represent a decrease of approximately 2% in gold reserves and an increase of approximately 2% in silver reserves, while copper reserves remained consistent in 2024 compared to 2023. The decrease in gold reserves is primarily due to mining depletion, partially offset by additions and positive net revisions.

As of December 31, 2024 and 2023, NGM reported 15.2 million and 17.3 million attributable ounces of gold resources, respectively, 0.2 million and 0.2 million attributable tonnes of copper resources, respectively, and 19.2 million and 19.9 million attributable ounces of silver resources, respectively. These changes represent a decrease of approximately 12% in gold resources and a decrease of approximately 4% in silver resources, while copper resources remained consistent in 2024 compared to 2023. The decrease in gold resources is primarily due to negative net revisions and conversion to reserves.

Brownfield exploration and development for new reserves is ongoing.

Held for Sale Properties

The following properties are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further discussion.

Cripple Creek & Victor, U.S. (100% owned) CC&V, located next to the town of Victor and the city of Cripple Creek, Colorado, is an open pit operation. The CC&V operation comprises two state mineral leases, 108 subdivided city lots, 30 surface and mineral parcels, and 1,642 patented lode, millsite, and placer claims, and 13 unpatented federal load claims encompassing a total area of 13,757 acres (5,567 hectares). CC&V is an epithermal alkalic deposit with heap leaching facilities. The available mining fleet consists of two hydraulic shovels, two loaders, and 21 haul trucks, each with a 230-tonne payload. CC&V's gross property, plant and mine development, included in *Assets held for sale*, at December 31, 2024 was \$1,229. CC&V reported 2.4 million ounces of gold reserves at December 31, 2024.

Musselwhite, Canada. (100% owned) Musselwhite, located approximately 265 miles (430 kilometers) north of Thunder Bay, Ontario, is an underground operation. The Musselwhite operation comprises 940 mining claims and 338 mining leases, issued under the Ontario Mining Act, encompassing an area of 162,178 acres (65,631 hectares). The mining leases expire between 2025 and 2033. Musselwhite is an iron formation hosted gold deposit. Process facilities include a conventional mill, which consists of a crushing and grinding circuit, carbon-in-pulp and carbon-in-leach plants, elution circuits and an electrowinning plant where the gold is recovered and smelted to produce doré. The available mining fleet consists of 11 underground loaders and 14 haul trucks, each with a 45-tonne payload. Musselwhite's gross property, plant and mine development, included in *Assets held for sale*, at December 31, 2024 was \$1,374. Musselwhite reported 1.5 million ounces of gold reserves at December 31, 2024.

Porcupine, Canada. (100% owned) Porcupine consists of the Hollinger open pit, Pamour Open Pit, and Hoyle Pond underground operations, located in the city of Timmins, Ontario, as well as the Borden underground operation, located near the town of Chapleau, Ontario. The Porcupine operation is comprised of 705 mining claims, 528 mining patents, and 96 mining leases, issued under the Ontario Mining Act, encompassing an area of 99,015 acres (40,070 hectares). The Borden operations is comprised of 488 mining cell claims, 489 surface and mining patents, and 21 surface and mining leases encompassing an area of 255,615 acres (103,446 hectares). Mineralization at Hollinger and Hoyle, in Timmins, comprises multiple generations of quartz-carbonate-tourmaline albite veins, associated pyrite alteration envelopes, and disseminated pyrite mineralization. Mineralization at Pamour, in Timmins, is in three distinct types, TN veins (type I) occurs in the Timiskaming assemblage rocks, extension veins (type II) form in the Timiskaming sediments as sheeted quartz veins or stockwork stringers best developed in the conglomerates and forms the bulk type mineralization, narrow vein hosted by volcanic units (type III) that crosscut stratigraphy. Gold occurs one as free gold associated with narrow, quartz ankerite extension veins associated with traces of sphalerite, galena and locally arsenopyrite, and two as a disseminated pyrite-gold alteration halo around quartz veinlets and stockworks. Mineralization at Borden consists of a shear zone containing quartz-vein hosted sulfides within a high-grade metamorphic greenstone package. Process facilities, located in the city of Timmins, include a conventional mill, which consists of a crushing and grinding circuit, carbon-in-pulp and carbon-in-leach plants, Knelson concentrators, Acacia reactor, elution circuits and an electrowinning plant where the gold is recovered and smelted to produce doré. The available mining fleet consists of three hydraulic shovels, five surface loaders, 18 underground loaders, and 32 haul trucks, with payloads ranging from 30 to 137 tonnes. Porcupine's gross property, plant and mine development, included in *Assets held for sale*, at December 31, 2024 was \$2,045. Porcupine reported 2.3 million ounces of gold reserves at December 31, 2024.

Éléonore, Canada. (100% owned) Éléonore, located approximately 510 miles (825 kilometers) north of Montreal in Eeyou Istchee/James Bay in Northern Quebec, is an underground operation. The Éléonore operation is comprised of 368 mining claims and one mining lease, issued under the Quebec Mining Act, encompassing 48,210 acres (19,511 hectares). Éléonore is a clastic sediment-hosted stockwork-disseminated gold deposit. Process facilities include a conventional mill which consists of a crushing and grinding circuit, flotation circuit, carbon-in-pulp circuits and an electrowinning plant where the gold is recovered and smelted to produce doré.

The available fleet consists of 13 underground loaders, and 10 haul trucks, each with 45 to 60-tonne payloads. Éléonore's gross property, plant and mine development, included in *Assets held for sale*, at December 31, 2024 was \$1,300. Éléonore reported 1.6 million ounces of gold reserves at December 31, 2024.

Akyem, Ghana. (100% owned) Akyem, located in Birim North District of the Eastern Region of Ghana, approximately 80 miles (125 kilometers) northwest of the national capital city of Accra, is an open pit mining operation comprised of two mining leases issued under the Ghanaian Mining Act, encompassing an area of approximately 16,000 acres (6,000 hectares). The Akyem mine is an orogenic gold deposit that has oxide and primary mineralization. Process facilities include a crushing plant, a SAG and ball milling circuit, carbon-in-leach circuit, elution circuit and bullion smelting facilities. The available mining fleet consists of four excavators made up of two front end shovels and two backhoe excavators and twenty-one 145-tonne payload haul trucks. Akyem's gross property, plant and mine development at December 31, 2024 was \$1,785. Akyem reported 0.9 million ounces of gold reserves at December 31, 2024.

Development and Exploration Properties

Newmont's development and exploration stage properties are set forth below for which we have declared reserves and/or resources. As these are in the development and exploration stages, the properties have not reached commercial production and do not have processing plants or other available facilities, except as noted below for Ahafo North.

Property	Stage	Size and Location	Ownership Interest and Type	Operator	Mine Types and Mineralization Styles	Titles, Mineral Rights, Leases or Options
Galore Creek	Exploration	455,502 acres (184,335 hectares) Located 230 miles northwest of Smithers in British Columbia, Canada.	50% owned. Joint venture with Teck Resources Limited that is proportionately consolidated.	Jointly operated by Newmont and Teck Resources Limited.	Galore Creek is an open pit mine and is an alkali porphyry copper gold deposit.	Galore Creek consists of 390 mineral claims.
Noche Buena	Exploration	3,946 acres (1,597 hectares) Located 35 miles northwest of Caborca, Sonora, Mexico, within the Peñasquito production property.	50% owned. Joint venture with Minera Frisco.	Newmont	Noche Buena is an intermediate sulfidation/skarn deposit.	Noche Buena consists of 32 mining concessions included within the Peñasquito production property.
NuevaUnión	Development	414,262 acres (167,646 hectares) Located in the Atacama Region of Chile.	50% owned. Joint venture with Teck Resources Limited accounted for as an equity method investment.	Jointly operated by Newmont and Teck Resources Limited.	NuevaUnión is an open pit mine and is a porphyry copper gold deposit.	NuevaUnión consists of 546 exploitation licenses and 630 exploration licenses.

Property	Stage	Size and Location	Ownership Interest and Type	Operator	Mine Types and Mineralization Styles	Titles, Mineral Rights, Leases or Options
Norte Abierto	Development	326,785 acres (132,245 hectares) Located in the Atacama Region of Chile.	50% owned. Joint venture with Barrick Gold Corporation accounted for as an equity method investment.	Jointly operated by Newmont and Barrick Gold Corporation.	Norte Abierto is an open pit mine and is a porphyry copper gold deposit with minor epithermal gold deposits.	Norte Abierto consists of 504 exploitation licenses, 174 exploration licenses, and 26 water rights.
Conga Project	Exploration	35,427 acres (14,337 hectares) Located within the Cajamarca Region of Northern Peru.	100% owned	Newmont	Conga is made up of a cluster of porphyry gold-copper deposits, including the Chailhuagón and Perol open pits.	Conga consists of one mining concession, included within the Yanacocha production property, and 278 surface rights (5,900 hectares).
Namosi	Exploration	115,897 acres (46,902 hectares) Located approximately 19 miles northwest of Suva on Viti Levu Island, Fiji.	73.24% owned. Joint venture with Materials Investments (Fiji) Limited that is proportionately consolidated.	Newmont	Namosi is an open pit mine and is a porphyry copper gold deposit.	Namosi consists of one special prospecting license.
Wafi-Golpu	Development	31,862 acres (12,894 hectares) Located approximately 40 miles from the city of Lae, Papua New Guinea.	50% owned. Joint venture with Harmony Gold Mining Company Limited that is proportionately consolidated.	Jointly operated by Newmont and Harmony Gold Mining Company Limited	Wafi-Golpu contains three separate but genetically related deposits: (1) Nambonga, a mineralized copper-gold quartz vein array; (2) Wafi, a high sulphidation epithermal gold deposit; and (3) Golpu, a mineralized multiphase porphyry style copper-gold deposit.	Wafi-Golpu consists of two exploration licenses. The State of PNG retains the right to purchase, at a pro rata share of accumulated exploration expenditure, up to 30% equity interest in any mineral discovery at Wafi-Golpu, at any time before the commencement of mining.
Ahafo North ⁽¹⁾	Development	93,354 acres (37,779 hectares) Located approximately 31 miles north of Ahafo South and approximately 236 miles northwest of the capital city of Accra, Ghana.	100% owned	Newmont	Ahafo North is comprised of six open pits and is an orogenic gold deposit with both oxide and primary mineralization.	Ahafo North consists of three prospecting licenses and one mining lease.
Coffee ⁽²⁾	Development	176,979 acres (71,621 hectares) Located approximately 81 miles south of Dawson City in Yukon Territory, Canada.	100% owned	Newmont	Coffee is an open pit mine and is a mid-cretaceous structurally hosted and controlled, gold-only deposit hosted in Paleozoic metamorphic rocks and mid-Cretaceous plutonic rocks.	Coffee consists of 150 placer claims and 3,543 quartz claims.

⁽¹⁾ At December 31, 2024, Ahafo North is classified as a development property. In July 2021, the Board of Directors approved full funding for the Ahafo North project, which is expected to commence commercial production in 2025. The available mining fleet at December 31, 2024 consists of three excavators, including two front-end shovels and one backhoe excavator, as well as sixteen 100-tonne payload haul trucks.

⁽²⁾ Coffee is classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further discussion.

Operating Statistics

The following tables detail operating statistics related to gold production, ounces sold, and production costs per ounce of our continuing operations:

Year Ended December 31, 2024	Mining and Production Detail ⁽¹⁾									
	Tonnes Mined			Tonnes Processed			Average Ore Grade ⁽²⁾		Average Mill Recovery Rate	
	Open Pit	Underground		Mill	Leach		Mill	Leach	Mill	Leach

⁽¹⁾ All amounts are reported in thousands unless otherwise noted.

⁽²⁾ Average ore grade reported in grams/tonne.

⁽³⁾ For the year ended December 31, 2024, Merian produced 205 attributable ounces, which reflects our 75% ownership interest. Total attributable ounces were 6,476 ounces.

⁽⁴⁾ Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽⁵⁾ In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽⁶⁾ Total gold consolidated ounces produced excludes 235 attributable ounces related to Pueblo Viejo, which is 40% owned by Newmont, managed by Barrick, and accounted for as an equity method investment.

⁽¹⁾ Production costs and All-in sustaining costs are not comparable due to differences in the items included in each of the measures. All-in sustaining costs is a non-GAAP financial measure. Refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A.

⁽²⁾ Per ounce measures may not recalculate due to rounding.

⁽³⁾ *Costs applicable to sales* per ounce is calculated as the sum of Direct mining and production costs, By-product credits, Royalties and production taxes, and Write-downs and inventory change.

⁽⁴⁾ *Costs applicable to sales* per ounce and All-in sustaining costs per ounce are non-GAAP financial measures. Refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A.

⁽⁵⁾ Total production costs is calculated as the sum of *Costs applicable to sales*, *Depreciation and amortization*, and *Reclamation and remediation*.

⁽⁶⁾ Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽⁷⁾ In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽²⁾ Average ore grade reported in grams/tonne.

⁽³⁾ Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽⁴⁾ For the year ended December 31, 2023, Merian produced 242 attributable ounces, which reflects our 75% ownership interest. Total attributable ounces were 5,321 ounces.

⁽⁵⁾ Total gold consolidated ounces produced excludes 224 attributable ounces related to Pueblo Viejo, which is 40% owned by Newmont, managed by Barrick, and accounted for as an equity method investment.

⁽¹⁾ All amounts are reported in thousands unless otherwise noted.

⁽²⁾ Average ore grade reported in grams/tonne.

⁽³⁾ Attributable ounces produced for Merian reflects our 75% ownership interest. The Company recognized amounts attributable to noncontrolling interest for Yanacocha for attributable ounces produced during the periods prior to acquiring Buenaventura's 43.65% interest and Sumitomo Corporation's 5.0% interest in the first half of 2022. Refer to Note 1 to the Consolidated Financial Statement for further information.

⁽⁴⁾ Total gold consolidated ounces produced excludes 285 attributable ounces related to Pueblo Viejo, which is 40% owned by Newmont, managed by Barrick, and accounted for as an equity method investment.

⁽¹⁾ For the years ended December 31, 2024, 2023 and 2022, all of our silver, lead, and zinc co-product production came from Peñasquito.

⁽²⁾ Sites acquired through the Newcrest transaction in 2023. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽³⁾ For the year ended December 31, 2022, all of our copper co-product production came from Boddington.

⁽⁴⁾ In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information.

The following tables detail operating statistics related to co-product metal production costs per gold equivalent ounce ("GEO") sold. Gold equivalent ounces are calculated as pounds or ounces produced multiplied by the ratio of the other metals' price to the gold price, using the metal prices in the table below:

	Gold (ounce)	Copper (pound)	Silver (ounce)	Lead (pound)	Zinc (pound)
2024 GEO Price	\$ 1,400	\$ 3.50	\$ 20.00	\$ 1.00	\$ 1.20
2023 GEO Price	\$ 1,400	\$ 3.50	\$ 20.00	\$ 1.00	\$ 1.20
2022 GEO Price	\$ 1,200	\$ 3.25	\$ 23.00	\$ 0.95	\$ 1.15

Year Ended December 31, 2024	Red Chris	Peñasquito	Boddington	Cadia	Telfer ⁽⁴⁾	Total / Weighted-Average
Consolidated GEO sold (thousands)	142	1,088	205	465	16	1,916
Production costs per GEO sold: ⁽¹⁾⁽³⁾

- (1) Production costs and All-in sustaining costs are not comparable due to differences in the items included in each of the measures. All-in sustaining costs is a non-GAAP financial measure. Refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A.
- (2) *Costs applicable to sales* per GEO and All-in sustaining costs per GEO are non-GAAP financial measures. Refer to Non-GAAP Financial Measures within Part II, Item 7, MD&A.
- (3) Per GEO measures may not recalculate due to rounding.
- (4) In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information.
- (5) Sites acquired through the Newcrest transaction in 2023. Refer to Note 3 to the Consolidated Financial Statements for further information.

Proven and Probable Reserves

All of our reserves are located on land (i) we own or control, or (ii) that is owned or controlled by business entities established with our joint venture partners, in which the Company owns its pro-rata share of the capital stock, membership units, or interests. The risks that could affect title to our property are included above in Item 1A, Risk Factors.

A “mineral reserve” is an estimate of tonnage and grade or quality of indicated and measured mineral resources that, in the opinion of the qualified person, can be the basis of an economically viable project. More specifically, it is the economically mineable part of a measured or indicated mineral resource, which includes diluting materials and allowances for losses that may occur when the material is mined or extracted. The term “economically viable,” as used in the definition of reserve, means that the qualified person has analytically determined that extraction of the mineral reserve is economically viable under reasonable investment and market assumptions.

The term “proven reserves” means the economically mineable part of a measured mineral resource and can only result from conversion of a measured mineral resource. The term “probable reserves” means reserves for which quantity and grade are computed from information similar to that used for proven reserves, but the sites for sampling are farther apart or are otherwise less closely spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation. Proven and probable reserves include gold, copper, silver, lead, zinc or molybdenum attributable to Newmont’s ownership or economic interest.

Proven and probable reserves are based on extensive drilling, sampling, mine modeling and metallurgical testing from which we determined economic feasibility. The reference point for mineral reserves is the point of delivery to the process plant. Metal price assumptions, adjusted for our exchange rate assumption, are based on considering such factors as market forecasts, industry consensus and management estimates. The price sensitivity of reserves depends upon several factors including grade, metallurgical recovery, operating cost, waste-to-ore ratio and ore type. Metallurgical recovery rates vary depending on the metallurgical properties of each deposit and the production process used. The reserve tables below list the average metallurgical recovery rate for each deposit, which takes into account the relevant processing methods. The cut-off grade, or lowest grade of mineralization considered economic to process, varies between deposits depending upon prevailing economic conditions, mineability of the deposit, by-products, amenability of the ore to gold, copper, silver, lead, zinc or molybdenum extraction and type of milling or leaching facilities available. Reserve estimates may have non-material differences in comparison to our joint venture partners due to differences in classification and rounding methodology.

The proven and probable reserve figures presented herein are estimates based on information available at the time of calculation. No assurance can be given that the indicated levels of recovery of gold, copper, silver, lead, zinc and molybdenum will be realized. Ounces of gold or silver or pounds of copper, lead, zinc or molybdenum included in the proven and probable reserves are those contained prior to losses during metallurgical treatment. Reserve estimates may require revision based on actual production. Market fluctuations in the price of gold, copper, silver, lead, zinc and molybdenum, as well as increased production costs or reduced metallurgical recovery rates, could render certain proven and probable reserves containing higher cost reserves uneconomic to exploit and might result in a reduction of reserves.

We had attributable proven and probable gold reserves of 134.1 million ounces at December 31, 2024. For 2024 and 2023, reserves were estimated at a gold price assumption of \$1,700 and \$1,400 per ounce, respectively, except as noted below. The increase in the reserves gold price assumption is based on the Company's assessment of multiple factors, including historical gold pricing trends, consensus price forecasts, and impacts of inflation. We estimate that our 2024 reserves would increase by 6% (7.4 million ounces), or decline by 6% (7.6 million ounces), if the gold price assumption increased or decreased \$100 per ounce, respectively, with all other assumptions remaining constant.

We publish reserves annually, and will recalculate reserves at December 31, 2025, taking into account metal prices, changes, if any, to future production and capital costs, divestments and depletion as well as any acquisitions and additions during 2025.

The Company has internal controls for reviewing and documenting the information supporting the mineral reserve and mineral resource estimates, describing the methods used, and ensuring the validity of the estimates. Information that is utilized to compile mineral reserves and resources is prepared and certified by appropriately qualified persons at the mine site level and is subject to our internal review process which includes review by the Newmont-designated site and the Qualified Person (“QP”) based in our corporate office in Denver, Colorado. Additionally, all material sites are audited every three years and the non-material sites on a four-year cycle by subject matter experts for compliance to internal standards and guidelines as well as regulatory requirements. The QP presents the mineral reserve and mineral resource information to the Audit Committee and the Disclosure Committee on an annual basis for further review.

The following tables detail gold proven and probable reserves reflecting only those reserves attributable to Newmont’s ownership or economic interest at December 31, 2024 and 2023.

Gold Reserves at December 31, 2024 ⁽¹⁾

⁽¹⁾ At December 31, 2024 and 2023, gold reserves at sites for which Newmont is the operator were estimated at a gold price of \$1,700 and \$1,400 per ounce, respectively, unless otherwise noted. Reserves provided by other operators may use pricing that differs. Amounts presented may not recalculate in total due to rounding.

- (2) Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to the nearest 100,000.
- (3) Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 100,000.
- (4) Gold reserves at December 31, 2024 were estimated at a gold price of \$1,300 per ounce.
- (5) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- (6) The net smelter return value utilized in 2024 reserves not less than \$14.10 per tonne.
- (7) Gold reserves related to the undeveloped Yanacocha Sulfides project at December 31, 2024 were estimated at a gold price of \$1,200 per ounce.
- (8) The Pueblo Viejo mine, which is 40% owned by Newmont, is accounted for as an equity method investment. Gold reserves at December 31, 2024 were estimated at a gold price of \$1,400 per ounce. Gold reserves at December 31, 2024 and 2023 were provided by Barrick, the operator of Pueblo Viejo.
- (9) Project is currently undeveloped. Gold reserves at December 31, 2024 and 2023 were estimated at a gold price of \$1,300 per ounce and were provided by the NuevaUnión joint venture.
- (10) Project is currently undeveloped. Gold reserves at December 31, 2024 and 2023 were estimated at a gold price of \$1,200 per ounce and were provided by the Norte Abierto joint venture.
- (11) The net smelter return value utilized in 2024 reserves not less than \$16.20 per tonne.
- (12) The net smelter return value utilized in 2024 reserves not less than \$21.70 per tonne.
- (13) Cut-off grade utilized in 2024 reserves not less than 1.20 gram per tonne.
- (14) Gold reserves at December 31, 2024 were estimated at a gold price of \$1,200 per ounce.
- (15) Cut-off grade utilized in 2024 reserves not less than 0.17 gram per tonne.
- (16) Cut-off grade utilized in 2024 reserves not less than 0.42 gram per tonne.
- (17) Cut-off grade utilized in 2024 reserves not less than 3.73 gram per tonne.
- (18) Gold reserves at December 31, 2024 were estimated at a gold price of \$1,400 per ounce. Gold reserves at December 31, 2024 and 2023 were provided by Barrick, the operator of the NGM joint venture.
- (19) Currently included in the non-operating segment Corporate and Other in Note 4 to the Consolidated Financial Statements.
- (20) Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further discussion of our assets and liabilities held for sale.
- (21) Leach pad material is the material on leach pads at the end of the year from which gold remains to be recovered. In-process reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- (22) Gold reserves at December 31, 2024 were estimated at a gold price of \$1,400 per ounce.
- (23) Amounts presented herein have been rounded to the nearest 100,000 for ounces and tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.
- (24) Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information. Gold reserves at sites acquired through the Newcrest transaction were estimated at a gold price of \$1,300 per ounce at December 31, 2023, with the exception of Lihir, for which gold reserves were estimated using Newmont's price assumptions, and certain legacy estimates, which have applied older, more conservative price assumptions.

The following tables detail copper proven and probable reserves reflecting only those reserves attributable to Newmont's ownership or economic interest at December 31, 2024 and 2023:

Copper Reserves at December 31, 2024 ⁽¹⁾

- (1) At December 31, 2024 and 2023, copper reserves at sites for which Newmont is the operator were estimated at a copper price of \$3.50 per pound, unless otherwise noted. Reserves provided by other operators may use pricing that differs. Amounts presented may not recalculate in total due to rounding.
- (2) Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to nearest 100,000.
- (3) Tonnes are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Tonnes may not recalculate as they are rounded to the nearest 100,000.
- (4) Copper reserves at December 31, 2024 were estimated at a copper price of \$3.00 per pound.
- (5) Copper reserve estimates relate to the undeveloped Yanacocha Sulfides project and at December 31, 2024 were estimated at a copper price of \$2.75 per pound.
- (6) Project is currently undeveloped. Copper reserves at December 31, 2024 and 2023 were estimated at a copper price of \$3.00 per pound and were provided by the NuevaUnión joint venture.
- (7) Project is currently undeveloped. Copper reserves at December 31, 2024 and 2023 were estimated at a copper price of \$2.75 per pound and were provided by the Norte Abierto joint venture.
- (8) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpiles are reported separately where pounds exceed 100 million and are greater than 5% of the total site reported reserves.
- (9) The net smelter return value utilized in 2024 reserves not less than \$16.20 per tonne.
- (10) The net smelter return value utilized in 2024 reserves not less than \$21.70 per tonne.
- (11) Copper reserves at December 31, 2024 were estimated at a copper price of \$3.00 per pound.
- (12) Copper cut-off grade varies with gold and silver credits. Copper reserves at December 31, 2024 were estimated at a copper price of \$3.00 per ounce. Copper reserves at December 31, 2024 and 2023 were provided by Barrick, the operator of the NGM joint venture.
- (13) Currently included in the non-operating segment Corporate and Other in Note 4 to the Consolidated Financial Statements.
- (14) Amounts presented herein have been rounded to the nearest 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.
- (15) Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information. Copper reserves at sites acquired through the Newcrest transaction were estimated at a copper price of \$3.00 per pound at December 31, 2023, with the exception of certain legacy estimates, which have applied older, more conservative price assumptions.

The following tables detail silver proven and probable reserves reflecting only those reserves attributable to Newmont's ownership or economic interest at December 31, 2024 and 2023:

Silver Reserves at December 31, 2024 ⁽¹⁾

⁽¹⁾ At December 31, 2024 and 2023, silver reserves at sites for which Newmont is the operator were estimated at a silver price of \$20.00 per ounce, unless otherwise noted. Reserves provided by other operators may use pricing that differs. Amounts presented may not recalculate in total due to rounding.

⁽²⁾ Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to nearest 100,000.

- (3) Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 100,000.
- (4) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- (5) The net smelter return value utilized in 2024 reserves not less than \$14.10 per tonne.
- (6) Leach pad material is the material on leach pads at the end of the year from which silver remains to be recovered. In-process reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- (7) Silver reserves related to the undeveloped Yanacocha Sulfides project at December 31, 2024 were estimated at a silver price of \$20.00 per ounce.
- (8) The Pueblo Viejo mine, which is 40% owned by Newmont, is accounted for as an equity method investment. Silver reserves at December 31, 2024 were estimated at a gold price of \$20.00 per ounce. Silver reserves at December 31, 2024 and 2023 were provided by Barrick, the operator of Pueblo Viejo.
- (9) Project is currently undeveloped. Silver reserves at December 31, 2024 and 2023 were estimated at a silver price of \$18.00 per ounce and were provided by the NuevaUnión joint venture.
- (10) Project is currently undeveloped. Silver reserves at December 31, 2024 and 2023 were estimated at a silver price of \$22.00 per ounce and were provided by the Norte Abierto joint venture.
- (11) The net smelter return value utilized in 2024 reserves not less than \$21.70 per tonne.
- (12) Silver cut-off grade varies with gold and copper credits. Silver reserves at December 31, 2024 were estimated at a silver price of \$24.00 per ounce. Silver reserves at December 31, 2024 and 2023 were provided by Barrick, the operator of the NGM joint venture.
- (13) Currently included in the non-operating segment Corporate and Other in Note 4 to the Consolidated Financial Statements.
- (14) Amounts presented herein have been rounded to the nearest 100,000 for ounces and tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.
- (15) Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information. Silver reserves at sites acquired through the Newcrest transaction were estimated at a silver price of \$18.00 per ounce at December 31, 2023.

The following tables detail lead proven and probable reserves reflecting only those reserves attributable to Newmont's ownership or economic interest at December 31, 2024 and 2023:

(1) At December 31, 2024 and 2023, molybdenum reserves at sites for which Newmont is the operator were estimated at a molybdenum price of \$13.00 and \$8.00 per pound, respectively, unless otherwise noted. Amounts presented may not recalculate in total due to rounding.

(2) Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to nearest 100,000.

- (3) Tonnes are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Tonnes may not recalculate as they are rounded to the nearest 100,000.
- (4) Project is currently undeveloped. Molybdenum reserves at December 31, 2024 and 2023 were estimated at a molybdenum price of \$10.00 per pound and were provided by the NuevaUnión joint venture.
- (5) Currently included in the non-operating segment Corporate and Other in Note 4 to the Consolidated Financial Statements.
- (6) The net smelter return value utilized in 2024 reserves not less than \$21.70 per tonne.
- (7) Amounts presented herein have been rounded to the nearest 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.
- (8) Site acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information.

Measured, Indicated, and Inferred Resources

All of our resources are located on land (i) we own or control, or (ii) that is owned or controlled by business entities established with our joint venture partners, in which the Company owns its pro-rata share of the capital stock, membership units, or interests. The risks that could affect title to our property are included above in Item 1A, Risk Factors.

The measured, indicated, and inferred resource figures presented herein are estimates based on information available at the time of calculation and are exclusive of reserves. A "mineral resource" is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade, or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. The reference point for mineral resources is in situ. Mineral resources are sub-divided, in order of increasing geological confidence, into inferred, indicated and measured categories. Ounces of gold and silver or pounds of copper, zinc, lead, molybdenum, and tungsten included in the measured, indicated and inferred resources are those contained prior to losses during metallurgical treatment. The terms "measured resource," "indicated resource," and "inferred resource" mean that part of a mineral resource for which quantity and grade or quality are estimated on the basis of geological evidence and sampling that is considered to be comprehensive, adequate, or limited, respectively.

Market fluctuations in the price of gold, silver, copper, zinc, lead, and molybdenum, as well as increased production costs or reduced metallurgical recovery rates, could change future estimates of resources. Metal price assumptions are based on approximately a ten to twenty-five percent premium over reserve prices.

Our exploration efforts are directed to the discovery of new resources and converting it into proven and probable reserves. We conduct brownfield exploration around our existing mines and greenfield exploration in other locations globally. Brownfield exploration can result in the discovery of additional deposits, which may receive the economic benefit of existing operating, processing and administrative infrastructures. In contrast, the discovery of mineralization through greenfield exploration efforts will require capital investment to build a stand-alone operation. Our *Exploration* expense was \$266, \$265, and \$231 in 2024, 2023, and 2022, respectively.

We had attributable measured and indicated gold resources of 99.4 million ounces and attributable inferred gold resources of 70.6 million ounces at December 31, 2024. For 2024 and 2023, attributable measured, indicated, and inferred gold resources were estimated at a gold price assumption of \$2,000 and \$1,600 per ounce, respectively, except as noted below. The increase in the resources gold price assumption is based on the Company's assessment of multiple factors, including historical gold pricing trends, consensus price forecasts, and impacts of inflation. For 2023, gold resources for Telfer were estimated at a gold price assumption of \$1,800 per ounce due to the short-term remaining mine life; in the fourth quarter of 2024, the Company sold the assets of the Telfer reportable segment.

The resource figures presented herein do not include that part of our resources that have been converted to Proven and Probable Reserves as shown above, as they are reported exclusive of reserves, and have been estimated based on information available at the time of calculation.

The Company has internal controls for reviewing and documenting the information supporting the mineral reserve and mineral resource estimates, describing the methods used, and ensuring the validity of the estimates. Refer to Proven and Probable Reserves above for further information on these internal controls.

We publish measured, indicated, and inferred resources annually, and will recalculate them at December 31, 2025, taking into account metal prices, changes, if any, in future production and capital costs, divestments and conversion to reserves, as well as any acquisitions and additions during 2025.

The following tables detail measured, indicated, and inferred resources reflecting only those that are attributable to Newmont's ownership or economic interest at December 31, 2024 and 2023.

Gold Resources at December 31, 2024 ⁽¹⁾⁽²⁾

⁽¹⁾ Resources are reported exclusive of reserves. Amounts presented may not recalculate in total due to rounding.

⁽²⁾ At December 31, 2024 and 2023, gold resources at sites for which Newmont is the operator were estimated at a gold price of \$2,000 and \$1,600 per ounce, unless otherwise noted. Resources provided by other operators may use pricing that differs. Tonnage amounts have been rounded to the nearest 100,000.

⁽³⁾ Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 100,000.

⁽⁴⁾ Gold resources related to the underground mine at December 31, 2024 were estimated at a gold price of \$1,400 per ounce.

⁽⁵⁾ Project is currently undeveloped. Resource estimates provided by Teck Resources, the Galore Creek joint venture partner.

⁽⁶⁾ Gold resources at December 31, 2024 were estimated at a gold price of \$1,400 per ounce.

⁽⁷⁾ Gold resources related to the undeveloped Yanacocha Sulfides project at December 31, 2024 were estimated at a gold price of \$1,400 per ounce.

⁽⁸⁾ The Pueblo Viejo mine, which is 40% owned by Newmont, is accounted for as an equity method investment. Gold resources at December 31, 2024 were estimated at a gold price of \$1,900 per ounce. Gold resources at December 31, 2024 and 2023 were provided by Barrick, the operator of Pueblo Viejo.

⁽⁹⁾ Project is currently undeveloped. Gold resources at December 31, 2024 and 2023 were estimated at a gold price of \$1,300 per ounce and were provided by the NuevaUnión joint venture.

⁽¹⁰⁾ Project is currently undeveloped. Gold resources at December 31, 2024 and 2023 were estimated at a gold price of \$1,400 per ounce and were provided by the Norte Abierto joint venture.

⁽¹¹⁾ Gold resources at December 31, 2024 were estimated at a gold price of \$1,400 per ounce.

⁽¹²⁾ Gold resources at December 31, 2024 were estimated at a gold price of \$1,300 per ounce.

⁽¹³⁾ Gold resources at December 31, 2024 were estimated at a gold price of \$1,400 per ounce.

⁽¹⁴⁾ Gold resources at December 31, 2024 were estimated at a gold price of \$1,900 per ounce. Gold resources at December 31, 2024 and 2023 were provided by Barrick, the operator of the NGM joint venture.

⁽¹⁵⁾ Currently included in the non-operating segment Corporate and Other in Note 4 to the Consolidated Financial Statements.

⁽¹⁶⁾ Amounts presented herein have been rounded to the nearest 100,000 for ounces and tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.

⁽¹⁷⁾ Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further discussion of our assets and liabilities held for sale.

⁽¹⁸⁾ Gold resources at December 31, 2024 were estimated at a gold price of \$1,600 per ounce.

(19) Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information. At December 31, 2023, gold resources at sites acquired through the Newcrest transaction were estimated at a gold price of \$1,400 per ounce, with the exception of Havieron and Lihir, for which gold resources were estimated using Newmont's price assumptions, and certain legacy estimates, which have applied older, more conservative price assumptions.

(20) In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment, which includes the Havieron development project. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽¹⁾ Resources are reported exclusive of reserves. Amounts presented may not recalculate in total due to rounding.

⁽²⁾ At December 31, 2024 and 2023, silver resources at sites in which Newmont is the operator were estimated at a silver price of \$23.00 per ounce, unless otherwise noted. Resources provided by other operators may use pricing that differs. Tonnage amounts have been rounded to the nearest 100,000.

⁽³⁾ Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 100,000.

⁽⁴⁾ Project is currently undeveloped. Resource estimates provided by Teck Resources.

⁽⁵⁾ Silver resources at December 31, 2024 were estimated at a silver price of \$26.00 per ounce.

⁽⁶⁾ Leach pad material is the material on leach pads at the end of the year from which silver remains to be recovered. In-process resources are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported resources.

⁽⁷⁾ Silver resources related to the undeveloped Yanacocha Sulfitides project at December 31, 2024 were estimated at a silver price of \$23.00 per ounce.

⁽⁸⁾ Silver resources at December 31, 2024 were estimated at a silver price of \$24.00 per ounce. Silver resources at December 31, 2024 and 2023 were provided by Barrick, the operator of the Pueblo Viejo.

⁽⁹⁾ Project is currently undeveloped. Silver resources at December 31, 2024 and 2023 were estimated at a silver price of \$18.00 per ounce and were provided by the NuevaUnión joint venture.

⁽¹⁰⁾ Project is currently undeveloped. Silver resources at December 31, 2024 and 2023 were estimated at a silver price of \$20.00 per ounce and were provided by the Norte Abierto joint venture.

⁽¹¹⁾ Silver resources at December 31, 2024 were estimated at a silver price of \$24.00 per ounce. Silver resources at December 31, 2024 and 2023 were provided by Barrick, the operator of the NGM joint venture.

⁽¹²⁾ Currently included in the non-operating segment Corporate and Other in Note 4 to the Consolidated Financial Statements.

(13) Amounts presented herein have been rounded to the nearest 100,000 for ounces and tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.

(14) Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information. Silver resources at sites acquired through the Newcrest transaction were estimated at a silver price of \$21.00 per ounce at December 31, 2023, with the exception of certain legacy estimates, which have applied older, more conservative price assumptions.

(1) Resources are reported exclusive of reserves.

(2) At December 31, 2023, tungsten resources were estimated at a tungsten price of \$16.00 per pound. Tonnage amounts have been rounded to the nearest 100,000. The Telfer reportable segment was acquired in 2023 through the Newmont transaction and subsequently sold in the fourth quarter of 2024. Refer to Note 3 to the Consolidated Financial Statements for further information. Due to the sale, the Company had no tungsten reserves at December 31, 2024.

(3) Tonnes are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Tonnes may not recalculate as they are rounded to the nearest 100,000.

ITEM 3. LEGAL PROCEEDINGS

Information regarding legal proceedings is contained in Note 25 to the Consolidated Financial Statements contained in this Report and is incorporated herein by reference. The Company has elected to apply a threshold of \$1 million pursuant to Item 103(c)(3)(iii) of Regulation S-K in connection with environmental proceedings to which a governmental authority is a party.

ITEM 4. MINE SAFETY DISCLOSURES

At Newmont, safety is a core value, and we strive for superior performance. In 2024, we lost four colleagues due to fatal events at sites not subject to regulation by the Federal Mine Safety and Health Administration ("MSHA") under the Federal Mine Safety and Health Act of 1977 (the "Mine Act"). We are working diligently to strengthen and improve our safety systems, along with the key safety tools that we use in the field. We are fully committed to understanding the factors that contributed to these tragedies, undertaking decisive action to improve our safety culture with a clear focus on seeking to effectively control all of the risks that could lead to a fatality. Newmont's Always Safe program reflects learning from these tragic events. The program focuses on Integrated Systems, Robust Capabilities and Empowered Behaviors, through a leadership commitment to care, clarity, and capability. We will also continue to transparently share the lessons we learned with our employees and our peers in the industry to help improve the safety performance of our sector.

Our health and safety management system, which includes detailed standards and procedures for safe production, addresses topics such as employee training, risk management, workplace inspection, emergency response, accident investigation and program auditing. In addition to strong leadership and involvement from all levels of the organization, these programs and procedures form the cornerstone of safety at Newmont, ensuring that employees are provided a safe and healthy environment and are intended to reduce workplace accidents, incidents and losses, comply with all mining-related regulations and provide support for both regulators and the industry to improve mine safety.

In addition, we have established our "Rapid Response" crisis management process to mitigate and prevent the escalation of adverse consequences if existing risk management controls fail, particularly if an incident may have the potential to seriously impact the safety of employees, the community or the environment. This process provides appropriate support to an affected site to complement their technical response to an incident, so as to reduce the impact by considering the environmental, strategic, legal, financial and public image aspects of the incident, to ensure communications are being carried out in accordance with legal and ethical requirements and to identify actions in addition to those addressing the immediate hazards. The health and safety of our people and our host communities is paramount.

The operation of our U.S. based mine is subject to regulation by the MSHA under the Mine Act. MSHA inspects our mine on a regular basis and issues various citations and orders when it believes a violation has occurred under the Mine Act. Following passage of The Mine Improvement and New Emergency Response Act of 2006, MSHA significantly increased the numbers of citations and orders charged against mining operations. The dollar penalties assessed for citations issued have also increased in recent years.

Newmont is required to report certain mine safety violations or other regulatory matters required by Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act and Item 104 of Regulation S-K, and that required information is included in Exhibit 95 and is incorporated by reference into this Annual Report. It is noted that the Nevada mines owned by NGM, in which the Company holds a 38.5% interest, are not included in the Company's Exhibit 95 mine safety disclosure reporting as such sites are operated by our joint venture partner, Barrick.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASE OF EQUITY SECURITIES (in millions, except share and per share data)

Our common stock is listed and principally traded on the New York Stock Exchange under the symbol "NEM." On February 13, 2025, there were 1,126,861,075 shares of Newmont's common stock outstanding, which were held by approximately 6,500 stockholders of record.

During the period from October 1, 2024 to December 31, 2024, 16,841,467 shares of Newmont's equity securities registered pursuant to Section 12 of the Exchange Act of 1934, as amended, were purchased by the Company, or an affiliated purchaser.

Period	(a) Total Number of Shares Purchased ⁽¹⁾	(b) Average Price Paid Per Share ⁽¹⁾	(c) Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs ⁽²⁾	(d) Maximum Dollar Value of Shares that may yet be Purchased under the Plans or Programs ⁽²⁾
October 1, 2024 through October 31, 2024	10,300,979	\$ 51.32	10,277,445	\$ 2,024
November 1, 2024 through November 30, 2024	3,645,079	\$ 42.73	3,627,052	\$ 1,869
December 1, 2024 through December 31, 2024	2,895,409	\$ 39.92	2,891,138	\$ 1,754

⁽¹⁾ The total number of shares purchased (and the average price paid per share) reflects: (i) shares purchased pursuant to the repurchase program described in (2) below; and (ii) shares delivered to the Company from stock awards held by employees upon vesting for the purpose of covering the recipients' tax withholding obligations, totaling 23,534 shares, 18,027 shares, and 4,271 shares for the fiscal months of October, November, December 2024, respectively.

⁽²⁾ In February 2024, the Board of Directors authorized a \$1 billion stock repurchase program to repurchase shares of outstanding common stock to provide returns to stockholders. In connection with the expected completion of such program, in October 2024, the Board authorized an additional \$2 billion share repurchase program, which will expire after 24 months (in October 2026). The program will be executed at the Company's discretion. The repurchase programs may be discontinued at any time, and the programs do not obligate the Company to acquire any specific number of shares of its common stock or to repurchase the full authorized amount during the authorization period. Consequently, the Board of Directors may revise or terminate such share repurchase authorizations in the future.

ITEM 6. RESERVED

None.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF CONSOLIDATED FINANCIAL CONDITION AND RESULTS OF OPERATIONS (dollars in millions, except per share, per ounce and per pound amounts)

The following Management's Discussion and Analysis of Consolidated Financial Condition and Results of Operations ("MD&A") provides information that management believes is relevant to an assessment and understanding of the consolidated financial condition and results of operations of Newmont Corporation, a Delaware corporation, and its subsidiaries (collectively, "Newmont," the "Company," "our" and "we"). We use certain non-GAAP financial measures in our MD&A. For a detailed description of each of the non-GAAP measures used in this MD&A, please refer to the discussion under Non-GAAP Financial Measures. This item should be read in conjunction with our Consolidated Financial Statements and the notes thereto included in this annual report.

The following MD&A generally discusses our consolidated financial condition and results of operations for 2024 and 2023 and year-to-year comparisons between 2024 and 2023. Discussions of our consolidated financial condition and results of operations for 2022 and year-to-year comparisons between 2023 and 2022 are included in Item 7, Management's Discussion and Analysis of Consolidated Financial Condition and Results of Operations, of the Company's Annual Report on Form 10-K, filed with the Securities and Exchange Commission on February 29, 2024.

Overview

Newmont is the world's leading gold company and is the only gold company included in the S&P 500 Index and the Fortune 500 list of companies. We have been included in the Dow Jones Sustainability Index-World since 2007 and have adopted the World Gold Council's Conflict-Free Gold Policy. In June 2024, the Company was named as the only miner in TIME's top 100 green firms ranking. Since 2015, Newmont has been ranked as the mining and metal sector's top gold miner by the S&P Global Corporate Sustainability Assessment. Newmont has been ranked the top miner in 3BL Media's 100 Best Corporate Citizens list which ranks the 1,000 largest publicly traded U.S. companies on ESG transparency and performance since 2020. We are primarily engaged in the exploration for and acquisition of gold properties, some of which may contain copper, silver, lead, zinc or other metals. We have significant operations and/or assets in the U.S., Canada, Mexico, Dominican Republic, Peru, Suriname, Argentina, Chile, Australia, Papua New Guinea, Ecuador, Fiji, and Ghana. Our goal is to create value and improve lives through sustainable and responsible mining.

Refer to the Consolidated Financial Results, Results of Consolidated Operations, Liquidity and Capital Resources and non-GAAP Financial Measures for information about the continued impacts from inflationary pressures, effects of certain countermeasures taken by central banks, and supply chain disruptions, with particular consideration on the outlook for increased costs specific to labor, materials, consumables and fuel and energy on operations, as well as impacts on the timing and cost of capital expenditures and the risk of potential impairment to certain assets. Refer to discussion of Risk and Uncertainties within Note 2 to the Consolidated Financial Statements for further information.

Non-core Asset Divestitures

Based on a comprehensive review of the Company's portfolio of assets following the Newcrest acquisition, the Company's Board of Directors approved a portfolio optimization program to divest six non-core assets and a development project in February 2024. The non-core assets to be divested include Akyem, CC&V, Éléonore, Porcupine, Musselwhite, Telfer, and a development project in Canada. In February 2024, the Company concluded that these non-core assets and the development project met the accounting requirements to be presented as held for sale in the first quarter of 2024, based on progress made through our active sales program and management's expectation that the sale is probable and will be completed within 12 months. As of December 31, 2023, the aggregate net book value of the non-core assets and the development project was \$3,419. While the Company remains committed to a plan to sell these assets for a fair price, there is a possibility that the assets held for sale may exceed one year due to events or circumstances beyond the Company's control.

In the second half of 2024, the Company entered into a definitive agreement to sell the assets of the Telfer reportable segment, which closed in the fourth quarter 2024. As a result of the sale, a loss of \$160 was recognized in *Loss on assets held for sale*. Additionally, in the fourth quarter of 2024 the Company entered into definitive agreements to sell the reportable segments of Akyem, Musselwhite, Éléonore, and CC&V and in January 2025 the Company entered into a definitive agreement to sell the Porcupine reportable segment. All of which are expected to close in the first half of 2025 and remained designated as held for sale at December 31, 2024.

The non-core assets and the development project classified as held for sale are recorded at the lower of the carrying value or fair value, less costs to sell. These assets are periodically valued until sale occurs with any resulting gain or loss recognized in *Loss on assets held for sale*. As a result, for the year ended December 31, 2024 a loss of \$859 was recognized within *Loss on assets held for sale*, of which \$160 and \$699 related to Telfer and the disposal groups remaining as held for sale as of December 31, 2024, respectively. The \$699 loss on the disposal groups remaining as held for sale resulted in an aggregate net book value of \$2,432 at December 31, 2024. A resulting tax impact of \$255 was recognized for the year ended December 31, 2024, resulting in a total loss of \$1,114 recognized for the year ended December 31, 2024, within *Loss on assets held for sale*.

For further information, refer to Note 3 to the Consolidated Financial Statements.

Newcrest Acquisition

On November 6, 2023, the Company completed its business combination transaction with Newcrest Mining Limited, a public Australian mining company limited by shares ("Newcrest"), whereby Newmont, through Newmont Overseas Holdings Pty Ltd, an Australian proprietary company limited by shares ("Newmont Sub"), acquired all of the ordinary shares of Newcrest in a fully stock transaction for total non-cash consideration of \$13,549. Newcrest became a direct wholly owned subsidiary of Newmont Sub and an indirect wholly owned subsidiary of Newmont (such acquisition, the "Newcrest transaction"). The combined company continues to be traded on the New York Stock Exchange under the ticker NEM. The combined company is also listed on the Toronto Stock Exchange under the ticker NGT, on the Australian Securities Exchange under the ticker NEM, and on the Papua New Guinea Securities Exchange under the ticker NEM. For further information, refer to Note 3 to the Consolidated Financial Statements.

For information on asset sales impacting comparability of below results, refer to Note 9 to the Consolidated Financial Statements.

Consolidated Financial Results

The details of our *Net income (loss) from continuing operations attributable to Newmont stockholders* are set forth below:

	Year Ended December 31,		Increase (decrease)
	2024	2023	
Net income (loss) from continuing operations attributable to Newmont stockholders	\$ 3,280	\$ (2,521)	\$ 5,801
Net income (loss) from continuing operations attributable to Newmont stockholders per common share, diluted	\$ 2.86	\$ (3.00)	\$ 5.86
	Year Ended December 31,		Increase (decrease)
	2023	2022	
Net income (loss) from continuing operations attributable to Newmont stockholders	\$ (2,521)	\$ (459)	\$ (2,062)
Net income (loss) from continuing operations attributable to Newmont stockholders per common share, diluted	\$ (3.00)	\$ (0.58)	\$ (2.42)

Net income (loss) from continuing operations attributable to Newmont stockholders increased during the year ended December 31, 2024, compared to the same period in 2023, partially due to the impact of sites acquired in the Newcrest transaction which contributed \$1,047 to the increase.

Excluding the impact of the sites acquired in the Newcrest transaction, the increase in *Net income (loss) from continuing operations attributable to Newmont stockholders* for the year ended 2024 compared to the same period in 2023 was primarily due to (i) higher average realized prices for all metals; (ii) lower *Impairment charges*; (iii) lower *Reclamation and remediation*; and (iv) and higher net income at Peñasquito which had been impacted in 2023 as a result of the labor strike. This increase was partially offset by the *Loss on assets held for sale* and higher income and mining tax expense.

Refer below for further information on the change in *Costs applicable to sales and Depreciation and amortization*.

The details and analyses of our *Sales* for all periods presented are set forth below. Refer to Note 5 to the Consolidated Financial Statements for additional information.

	Year Ended December 31,		Increase (decrease)

The change in consolidated sales is due to:

Year Ended December 31,					
2024 vs. 2023					
	Gold	Copper	Silver	Lead	Zinc
	(ounces)	(pounds)	(ounces)	(pounds)	(pounds)
Increase (decrease) in consolidated ounces/pounds sold	\$ 2,197	\$ 698	\$ 346	\$ 98	\$ 387
Increase (decrease) in average realized price	2,970	63	122	1	46
Decrease (increase) in treatment and refining charges	(14)	(9)	(11)	—	(24)
	<u>\$ 5,153</u>	<u>\$ 752</u>	<u>\$ 457</u>	<u>\$ 99</u>	<u>\$ 409</u>

Year Ended December 31,					
2023 vs. 2022					
	Gold	Copper	Silver	Lead	Zinc
	(ounces)	(pounds)	(ounces)	(pounds)	(pounds)
Increase (decrease) in consolidated ounces/pounds sold	\$ (704)	\$ 266	\$ (260)	\$ (39)	\$ (233)
Increase (decrease) in average realized price	884	24	26	(6)	(75)
Decrease (increase) in treatment and refining charges	(3)	(31)	20	8	20
	<u>\$ 177</u>	<u>\$ 259</u>	<u>\$ (214)</u>	<u>\$ (37)</u>	<u>\$ (288)</u>

Sales increased during the year ended December 31, 2024, compared to the same period in 2023, by \$6,870, primarily due to a net increase in gold and copper sales of \$5,153 and \$752, respectively. Of the gold and copper sales increases, \$2,807 and \$786, were attributable to sites acquired in the Newcrest transaction, respectively.

For discussion regarding drivers impacting sales volumes by site, refer to Results of Consolidated Operations below.

The details of our *Costs applicable to sales* are set forth below.

	Year Ended December 31,		Increase (decrease)
	2024	2023	
Gold	\$ 7,364	\$ 5,689	\$ 1,675
Copper	696	359	337
Silver	360	300	60
Lead	116	98	18
Zinc	427	253	174
	<u>\$ 8,963</u>	<u>\$ 6,699</u>	<u>\$ 2,264</u>

	Year Ended December 31,		Increase (decrease)
	2023	2022	
Gold	\$ 5,689	\$ 5,423	\$ 266
Copper	359	181	178
Silver	300	454	(154)
Lead	98	94	4
Zinc	253	316	(63)
	<u>\$ 6,699</u>	<u>\$ 6,468</u>	<u>\$ 231</u>

The increase in *Costs applicable to sales* during the year ended December 31, 2024, compared to the same period in 2023, is primarily due to the impact of sites acquired in the Newcrest transaction, which contributed \$1,551 to the increase to *Costs applicable to sales*.

The increase in *Costs applicable to sales* during the year ended December 31, 2024, compared to the same period in 2023, was further impacted by (i) an increase of \$319 at Peñasquito due to reduced operations in 2023 as a result of the labor strike, (ii) a drawdown of inventory and higher royalties at Ahafo, Akyem and Yanacocha, (iii) higher equipment maintenance costs at Tanami, and (iv) higher contracted services and labor costs at Ahafo; partially offset by a decrease in *Costs applicable to sales* at Boddington and Cerro Negro due to lower production.

For discussion regarding other significant drivers impacting *Costs applicable to sales* by site, refer to Results of Consolidated Operations below.

The Company uses both straight-line and UOP methods of depreciation. *Depreciation and amortization* will vary as a result of fluctuations in sales volumes and depreciation rates utilized at our mining sites. The details of our *Depreciation and amortization* are set forth below. Refer to Note 4 to the Consolidated Financial Statements for additional information.

	Year Ended December 31,		Increase (decrease)
	2024	2023	
Gold	\$ 1,918	\$ 1,730	\$ 188
Copper	217	53	164
Silver	159	134	25
Lead	52	45	7
Zinc	162	105	57
Other	68	41	27
	<u>\$ 2,576</u>	<u>\$ 2,108</u>	<u>\$ 468</u>

	Year Ended December 31,		Increase (decrease)
	2023	2022	
Gold	\$ 1,730	\$ 1,838	\$ (108)
Copper	53	34	19
Silver	134	151	(17)
Lead	45	32	13
Zinc	105	96	9
Other	41	34	7
	<u>\$ 2,108</u>	<u>\$ 2,185</u>	<u>\$ (77)</u>

The increase in *Depreciation and amortization* during the year ended December 31, 2024, compared to the same period in 2023, is primarily due to the impact of sites acquired in the Newcrest transaction, which contributed \$582 to the increase in *Depreciation and amortization*.

Excluding the impact of the sites acquired in the Newcrest transaction, *Depreciation and amortization* decreased by \$114 during the year ended December 31, 2024, compared to the same period in 2023, primarily due to the cessation of depreciation at sites classified as held for sale beginning in March 2024, partially offset by higher ounces mined at Peñasquito in the current year due to the Peñasquito labor strike in 2023 and higher ounces mined and asset additions at Ahafo.

For discussion regarding other significant drivers impacting *Depreciation and amortization* by site, refer to Results of Consolidated Operations below.

General and administrative expense was \$442, \$299, and \$276 in 2024, 2023, and 2022, respectively. *General and administrative* expense increased in 2024, compared to 2023, primarily due to higher salaries and benefits, non-integration related consulting and other charges resulting from the Newcrest transaction, and higher travel costs during the year. *General and administrative* expense as a percentage of *Sales* was 2.4%, 2.5%, and 2.3% for 2024, 2023 and 2022 respectively.

Interest expense, net of capitalized interest was \$375, \$243, and \$227 in 2024, 2023, and 2022, respectively. Capitalized interest totaled \$114, \$89, and \$69 in each year, respectively. *Interest expense, net of capitalized interest* increased in 2024, compared to 2023, as a result of the interest expense recognized for the entire year on the debt acquired in the Newcrest transaction in November 2023.

Income and mining tax expense (benefit) was \$1,397, \$526, and \$455 in 2024, 2023 and 2022, respectively. The effective tax rate is driven by a number of factors and the comparability of our income tax expense for the reported periods will be primarily affected by (i) variations in our income before income taxes; (ii) geographic distribution of that income; (iii) impacts of the changes in tax law; (iv) valuation allowances on tax assets; (v) percentage depletion; (vi) fluctuation in the value of the United States dollar and foreign currencies; and (vii) the impact of specific transactions and assessments including significant impairments of goodwill during 2023 and 2022. As a result, the effective tax rate will fluctuate, sometimes significantly, year to year. This trend is expected to continue in future periods. Refer to Note 10 to the Consolidated Financial Statements for further discussion of income taxes.

⁽¹⁾ Represents income (loss) from continuing operations by geographic location before income taxes and equity in affiliates. These amounts will not reconcile to the Segment Information for the reasons stated in Note 4 to the Consolidated Financial Statements.

⁽²⁾ The consolidated effective income tax rate is a function of the combined effective tax rates for the jurisdictions in which we operate. Variations in the relative proportions of jurisdictional income could result in fluctuations to our combined effective income tax rate.

⁽³⁾ Includes \$19 and \$28 of withholding tax for the year ended December 31, 2024 and 2023, respectively.

Recently Enacted Legislation

In 2024, Pillar II went into effect. The Pillar II agreement was signed by numerous countries with the intent to equalize corporate tax around the world by implementing a global minimum tax of 15%. As Newmont primarily does business in jurisdictions with a tax rate greater than 15%, the Company does not anticipate a material impact to the Consolidated Financial Statements.

Net income (loss) from discontinued operations was \$68, \$27, and \$30 in 2024, 2023, and 2022, respectively. *Net income (loss) from discontinued operations* increased in 2024, compared to 2023, primarily due to the sale of the Batu and Elang contingent consideration assets, including the income tax benefit associated with a release of a valuation allowance on the capital loss carryforward in the U.S. Refer to Note 14 to the Consolidated Financial Statements for additional information.

Refer to the Notes to the Consolidated Financial Statements for explanations of other financial statement line items.

Results of Consolidated Operations

Newmont has developed gold equivalent ounces ("GEO") metrics to provide a comparable basis for analysis and understanding of our operations and performance related to copper, silver, lead and zinc. Gold equivalent ounces are calculated as pounds or ounces produced or sold multiplied by the ratio of the other metals' price to the gold price, using the metal prices in the table below:

	Gold	Copper	Silver	Lead	Zinc
	(ounce)	(pound)	(ounce)	(pound)	(pound)
2024 GEO Price ⁽¹⁾	\$ 1,400	\$ 3.50	\$ 20.00	\$ 1.00	\$ 1.20
2023 GEO Price	\$ 1,400	\$ 3.50	\$ 20.00	\$ 1.00	\$ 1.20
2022 GEO Price	\$ 1,200	\$ 3.25	\$ 23.00	\$ 0.95	\$ 1.15

⁽¹⁾ Effective January 1, 2025, GEO pricing was updated to align with reserve metal price assumptions as follows: Gold (\$1,700/oz.), Copper (\$3.50/lb.), Silver (\$20.00/oz.), Lead (\$0.90/lb.), and Zinc (\$1.20/lb.). The update to GEO pricing will have an impact on the calculated gold equivalent ounces. This will result in an impact to costs allocated to the respective GEOs, particularly resulting in higher costs allocated to gold.

- (1) Excludes *Depreciation and amortization* and *Reclamation and remediation*.
- (2) All-in sustaining costs is a non-GAAP financial measure. Refer to Non-GAAP Financial Measures below.
- (3) Sites acquired through the Newcrest transaction during the fourth quarter of 2023, and as such, the comparative results of operations information is not meaningful. Refer to Note 3 to the Consolidated Financial Statements for further information on the Newcrest transaction.
- (4) Sites were classified as held for sale beginning in the first quarter of 2024, and as such, the Company ceased recording depreciation and amortization at these sites in March 2024. Refer to Note 3 of the Consolidated Financial Statements for further discussion of our assets and liabilities held for sale.
- (5) During the second quarter, seepage points were detected on the outer wall and around the tailings storage facility at Telfer and we temporarily ceased placing new tailings on the facility. Production resumed at the end of the third quarter upon successful remediation of the tailings storage facility. During the fourth quarter of 2024, we recognized a benefit of \$50 related to business insurance proceeds as a result of the event, recorded in *Costs applicable to sales*.
- (6) All-in sustaining costs and *Depreciation and amortization* include expense for Corporate and Other.
- (7) The Company acquired the remaining interest in Yanacocha in 2022, resulting in 100% ownership interest at December 31, 2022. The Company recognized amounts attributable to non-controlling interests for Yanacocha for the periods prior to acquiring 100% ownership. Refer to Note 1 to the Consolidated Financial Statement for further information.
- (8) For the year ended December 31, 2024 and 2023, Red Chris produced 58 million and 8 million pounds of copper, respectively.
- (9) For the year ended December 31, 2024, Peñasquito produced 33 million ounces of silver, 212 million pounds of lead and 569 million pounds of zinc. For the year ended December 31, 2023, Peñasquito produced 18 million ounces of silver, 113 million pounds of lead and 230 million pounds of zinc. For the year ended December 31, 2022, Peñasquito produced 30 million ounces of silver, 149 million pounds of lead and 377 million pounds of zinc.
- (10) For the years ended December 31, 2024, 2023 and 2022, Boddington produced 83 million, 98 million and 84 million pounds of copper, respectively.
- (11) For the year ended December 31, 2024 and 2023, Cadia produced 191 million and 36 million pounds of copper, respectively.
- (12) For the year ended December 31, 2024 and 2023, Telfer produced 6 million and 3 million pounds of copper, respectively.
- (13) Income and expenses of equity method investments are included in *Equity income (loss) of affiliates*. Refer to Note 15 to the Consolidated Financial Statements for further discussion of our equity method investments.
- (14) The Fruta del Norte mine is wholly owned and operated by Lundin Gold. Newmont holds a 32.0% interest in Lundin Gold and accounts for it on a quarterly-lag as an equity method investment. As a result, results of operations was first reported in the first quarter of 2024.
- (15) In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Telfer was classified as held for sale beginning in the first quarter of 2024, and as such, the Company ceased recording depreciation and amortization in March 2024. Refer to Note 3 to the Consolidated Financial Statements for further information.

Peñasquito, Mexico. Gold production increased 109% and gold equivalent ounces – other metals production increased 108% primarily due to higher mill throughput in the current year due to the Peñasquito labor strike in 2023 which ended in the fourth quarter of 2023, higher ore grade milled and higher mill recovery, partially offset by a higher buildup of in-circuit inventory. *Costs applicable to sales* per gold ounce decreased 36% primarily due to higher gold ounces sold in the current year as a result of the Peñasquito labor strike in 2023, partially offset by higher energy costs, higher contracted services costs, and higher materials costs. *Costs applicable to sales* per gold equivalent ounce – other metals decreased 35% primarily due to higher gold equivalent ounces sold in the current year as a result of the Peñasquito labor strike in 2023 and lower inventory write-downs in the current year, partially offset by higher energy costs, higher contracted services costs, higher materials costs, higher selling costs, and higher workers participation costs. *Depreciation and amortization* per gold ounce decreased 31% and *Depreciation and amortization* per gold equivalent ounce – other metals decreased 39% primarily due to higher gold ounces sold and gold equivalent ounces - other metals sold respectively, as a result of the Peñasquito labor strike in 2023. All-in sustaining costs per gold ounce decreased 38% primarily due to lower cost applicable to sales per gold ounce. All-in sustaining costs per gold equivalent ounce – other metals decreased 38% primarily due to lower cost applicable to sales per gold equivalent ounce - other metals, partially offset by higher treatment and refining costs.

Merian, Suriname. Gold production decreased 15% primarily due to lower ore grade milled. *Costs applicable to sales* per gold ounce increased 21% primarily due to lower gold ounces sold and higher labor costs. *Depreciation and amortization* per gold ounce increased 19% primarily due to lower gold ounces sold. All-in sustaining costs per gold ounce increased 20% primarily due to higher costs applicable to sales per gold ounce.

Cerro Negro, Argentina. Gold production decreased 12% primarily due to lower mill throughput as a result of temporarily suspending mining at the site due to the tragic fatalities during the second quarter of 2024, partially offset by higher ore grade milled. *Costs applicable to sales* per gold ounce increased 5% primarily due to lower gold ounces sold, higher labor costs, and higher materials costs, partially offset by lower export duties. *Depreciation and amortization* per gold ounce was generally in line with the prior year. All-in sustaining costs per gold ounce increased 8% primarily due to higher costs applicable to sales per gold ounce and higher sustaining capital spend.

Yanacocha, Peru. Gold production increased 28% primarily due to higher leach pad production as a result of injection leaching. *Costs applicable to sales* per gold ounce decreased 6% primarily due to higher gold ounces sold. *Depreciation and amortization* per gold ounce decreased 10% primarily due to higher gold ounces sold. All-in sustaining costs per gold ounce decreased 6% primarily due to lower costs applicable to sales per gold ounce.

Boddington, Australia. Gold production decreased 21% and gold equivalent ounces – other metals production decreased 16% primarily due to lower ore grade milled and lower mill throughput. *Costs applicable to sales* per gold ounce increased 25% primarily

due to lower gold ounces sold and higher equipment maintenance costs. *Costs applicable to sales* per gold equivalent ounce – other metals increased 20% primarily due to lower gold equivalent ounces - other metals sold and higher equipment maintenance costs. *Depreciation and amortization* per gold ounce increased 34% primarily due to lower gold ounces sold and higher depreciation rates due to changes in mine life. *Depreciation and amortization* per gold equivalent ounce - other metals increased 31% primarily due to lower gold equivalent ounces - other metals sold and higher depreciation rates due to changes in mine life. All-in sustaining costs per gold ounce increased 21% primarily due to higher costs applicable to sales per gold ounce, partially offset by lower sustaining capital spend. All-in sustaining costs per gold equivalent ounce – other metals increased 10% primarily due to higher *Costs applicable to sales* per gold equivalent ounce - other metals, partially offset by lower sustaining capital spend.

Tanami, Australia. Gold production decreased 9% primarily due to lower ore grade milled. *Costs applicable to sales* per gold ounce increased 25% primarily due to higher equipment maintenance cost and lower gold ounces sold. *Depreciation and amortization* per gold ounce increased 20% primarily due to asset additions and lower gold ounces sold. All-in sustaining costs per gold ounce increased 21% primarily due to higher costs applicable to sales per gold ounce.

Ahafo, Ghana. Gold production increased 37% primarily due to higher ore grade milled and higher mill throughput. *Costs applicable to sales* per gold ounce decreased 5% primarily due to higher gold ounces sold, partially offset by higher third-party royalties, and higher contracted services and labor costs. The higher mill throughput in the current year relates in part to a conveyor crusher failure and damage that was discovered in the SAG mill girth gear that limited mill operations below its full capacity in 2023. The conveyor was rebuilt and fully commissioned in the third quarter of 2023, and the SAG mill girth gear was replaced in the second quarter of 2024. *Depreciation and amortization* per gold ounce decreased 13% primarily due to higher gold ounces sold, partially offset by higher depreciation rates as a result of higher gold ounces mined and asset additions. All-in sustaining costs per gold ounce decreased 12% primarily due to lower sustaining capital spend and lower *Costs applicable to sales* per gold ounce.

NGM, U.S. Attributable gold production decreased 11% due to lower ore grade milled at Carlin and Cortez, lower leach pad production at Cortez, partially offset by higher mill throughput at Carlin and Cortez. *Costs applicable to sales* per gold ounce increased 14% primarily due to lower gold ounces sold at Cortez, Carlin and Turquoise Ridge, higher contracted services and maintenance costs at Cortez and Turquoise Ridge, and higher inventory write-downs at Cortez in the current year, partially offset by lower inventory write-downs at Carlin in the current year. *Depreciation and amortization* per gold ounce increased 7% primarily due to lower gold ounces sold at Cortez, Carlin and Turquoise Ridge. All-in sustaining costs per gold ounce increased 15% primarily due to higher costs applicable to sales per gold ounce and higher sustaining capital spend at Carlin, partially offset by lower sustaining capital spend at Cortez.

CC&V, U.S. Gold production decreased 15% primarily due to lower leach pad production as a result of lower ore tonnes mined. *Costs applicable to sales* per gold ounce increased 20% primarily due to lower gold ounces sold. *Depreciation and amortization* per gold ounce decreased 34% primarily due to cessation of depreciation and amortization as a result of classifying the asset as held for sale. All-in sustaining costs per gold ounce were generally in line with the prior year.

Musselwhite, Canada. Gold production increased 18% primarily due to higher ore grade milled. *Costs applicable to sales* per gold ounce decreased 12% primarily due to higher gold ounces sold. *Depreciation and amortization* per gold ounce decreased 81% primarily due to cessation of depreciation and amortization as a result of classifying the asset as held for sale. All-in sustaining costs per gold ounce decreased 16% primarily due to lower costs applicable to sales per gold ounce and lower sustaining capital spend.

Porcupine, Canada. Gold production increased 9% primarily due to higher ore grade milled and higher mill recovery. *Costs applicable to sales* per gold ounce decreased 6% primarily due to higher gold ounces sold. *Depreciation and amortization* per gold ounce decreased 72% primarily due to cessation of depreciation and amortization as a result of classifying the asset as held for sale. All-in sustaining costs per gold ounce decreased 9% primarily due to lower costs applicable to sales per gold ounce and lower reclamation and exploration spend.

Éléonore, Canada. Gold production was generally in line with prior year. *Costs applicable to sales* per gold ounce increased 6% primarily due to higher contracted services costs, higher labor costs, and higher materials costs. *Depreciation and amortization* per gold ounce decreased 80% primarily due to cessation of depreciation and amortization as a result of classifying the asset as held for sale. All-in sustaining costs per gold ounce were generally in line with prior year.

Akyem, Ghana. Gold production decreased 31% primarily due to lower ore grade milled, partially offset by higher mill throughput. *Costs applicable to sales* per gold ounce increased 71% primarily due to a drawdown of stockpile inventory, higher third-party royalties, and lower gold ounces sold. *Depreciation and amortization* per gold ounce decreased 34% primarily due to cessation of depreciation and amortization as a result of classifying the asset as held for sale. All-in sustaining costs per gold ounce increased 50% primarily due to higher costs applicable to sales per gold ounce, partially offset by lower reclamation spend and lower sustaining capital spend.

Pueblo Viejo, Dominican Republic. Attributable gold production increased 5% primarily due to higher mill throughput, partially offset by lower mill recovery and a buildup of in-circuit inventory compared to a drawdown in the prior year. Refer to Note 15 of the Consolidated Financial Statements for further discussion of our equity method investments.

Foreign Currency Exchange Rates

Our foreign operations sell their gold, copper, silver, lead, and zinc production based on USD metal prices. Therefore, fluctuations in foreign currency exchange rates do not have a material impact on our revenue. Despite selling gold and silver in London, we have no exposure to the euro or the British pound.

Foreign currency exchange rates can increase or decrease profits to the extent costs are paid in foreign currencies. In 2024, approximately 58% of *Costs applicable to sales* were paid in currencies other than the U.S. dollar as follows:

	Year Ended December 31, 2024
Australian Dollar	26 %
Canadian Dollar	15 %
Mexican Peso	6 %
Papua New Guinean Kina	4 %
Argentine Peso	3 %
Surinamese Dollar	3 %
Peruvian Sol	1 %
Ghanaian Cedi	— %

Variations in the local currency exchange rates in relation to the USD at our foreign mining operations decreased *Costs applicable to sales* at sites held prior to the Newcrest transaction by \$122 per gold ounce during the year ended December 31, 2024, respectively, compared to the same period in 2023. The decrease was primarily due to significant currency devaluation in Argentina that occurred starting in the fourth quarter of 2023. Excluding the impact of the Argentine peso devaluation, *Costs applicable to sales* at sites held prior to the Newcrest transaction decreased by \$5 per gold ounce during the year ended December 31, 2024 compared to the same period in 2023, resulting from variations in the local currency exchange rates in relation to the USD at our other foreign mining operations.

Variations in the local currency exchange rates in relation to the USD at our foreign mining operations decreased *Costs applicable to sales* per gold equivalent ounce at sites held prior to the Newcrest transaction by \$12, primarily in Mexico, during the year ended December 31, 2024 compared to the same periods in 2023.

At December 31, 2024, the Company held AUD- and CAD-denominated fixed forward contracts to mitigate variability in the USD functional cash flows related to the AUD- and CAD-denominated operating expenditures to be incurred between October 2024 and December 2025 at certain sites, respectively. The unrealized changes in fair value for the fixed forward contracts are recorded in *Accumulated other comprehensive income (loss)* and will be reclassified to earnings through *Costs applicable to sales* beginning October 2024. Refer to Note 14 of the Consolidated Financial Statements for further information on our hedging instruments.

Hyperinflationary Economies

Hyperinflationary economies are defined by the International Monetary Fund as economies in which the projected three-year cumulative inflation exceeds 100%. For the year ended December 31, 2024, hyperinflationary economies in which the Company held operations included Ghana, Argentina, and Suriname.

Ghana. Our Ahafo and Akyem mines are located in Ghana and are USD functional currency entities. In 2021, the Bank of Ghana created a gold purchase program in the effort to stabilize the local currency and build up gold reserves through domestic gold purchases conducted in local currency at prevailing market rates. As the gold purchase program was voluntary, there was no significant impact to Ahafo. The majority of Ahafo's activity has historically been denominated in USD; as a result, the devaluation of the Ghanaian cedi has resulted in an immaterial impact on our financial statements. Therefore, future devaluation of the Ghanaian cedi is not expected to have a material impact on our financial statements.

Argentina. Our Cerro Negro mine is located in Argentina and is a USD functional currency entity. Beginning in 2020, Argentina's central bank enacted a number of foreign currency controls in an effort to stabilize the local currency, including requiring the Company to convert USD proceeds from metal sales to local currency within 60 days from shipment date or 20 business days from receipt of cash, whichever happens first, as well as restricting payments to foreign-related entities denominated in foreign currency, such as dividends or distributions to the parent and related companies and royalties and other payments to foreign beneficiaries. These restrictions directly impact Cerro Negro's ability to repay intercompany debt to the Company. In the third quarter of 2024, certain restrictions were lifted or modified, allowing companies to repay intercompany debt in certain circumstances. We continue to monitor the foreign currency exposure risk and the evolution of limitations of repatriating cash to the U.S. Currently, these currency controls are not expected to have a material impact on our financial statements.

Suriname. Our Merian mine is located in Suriname and is a USD functional currency entity. In 2021, the Central Bank took steps to stabilize the local currency, while the government introduced new legislation to narrow the gap between government revenues

and spending. The measures to increase government revenue mainly consist of tax increases; however, Newmont and the Republic of Suriname have a Mineral Agreement in place that supersedes such measures. The Central Bank of Suriname adopted a controlled floating rate system, which resulted in a concurrent devaluation of the Surinamese dollar. The majority of Merian's activity has historically been denominated in USD; as a result, the devaluation of the Surinamese dollar has resulted in an immaterial impact on our financial statements. Therefore, future devaluation of the Surinamese dollar is not expected to have a material impact on our financial statements.

Liquidity and Capital Resources

Liquidity Overview

We have a disciplined capital allocation strategy of maintaining financial flexibility to execute our capital priorities and generate long-term value for our stockholders. Consistent with that strategy, we aim to self-fund development projects and make strategic partnerships focused on profitable growth, while reducing our debt and returning cash to stockholders through dividends and share repurchases.

The Company continues to experience the impacts from geopolitical and macroeconomic pressures. With the resulting volatile environment, we continue to monitor inflationary conditions, the effects of certain countermeasures taken by central banks, and the potential for further supply chain disruptions, as well as an uncertain and evolving labor market. Depending on the duration and extent of the impact of these events, or changes in commodity prices, the prices for gold and other metals, and foreign exchange rates, we could continue to experience volatility; transportation industry disruptions could continue, including limitations on shipping produced metals; our supply chain could continue to experience disruption; cost inflation rates could further increase; or we could incur credit related losses of certain financial assets, which could materially impact our results of operations, cash flows and financial condition.

As of December 31, 2024, we believe our available liquidity allows us to manage the short- and, possibly, long-term material adverse impacts of these events on our business. Refer to Note 2 to the Consolidated Financial Statements for further discussion on risks and uncertainties.

At December 31, 2024, the Company had \$3,664 in *Cash and cash equivalents*, of which \$3,619 was included in *Cash and cash equivalents* and \$45 was included in *Assets held for sale* related to certain non-core assets that were classified as held for sale in the first quarter of 2024. The majority of our cash and cash equivalents are invested in a variety of highly liquid and low-risk investments with original maturities of three months or less that are available to fund our operations as necessary. We may have investments in prime money market funds that are classified as cash and cash equivalents; however, we continually monitor the need for reclassification under the SEC requirements for money market funds, and the potential that the shares of such funds could have a net asset value of less than their par value. We believe that our liquidity and capital resources are adequate to fund our operations and corporate activities.

At December 31, 2024, \$1,970 of *Cash and cash equivalents* was held in foreign subsidiaries and is primarily held in USD denominated accounts with the remainder in foreign currencies readily convertible to USD. Cash and cash equivalents denominated in Argentine peso are subject to regulatory restrictions. Refer to Foreign Currency Exchange Rates above for further information. At December 31, 2024, \$1,655 in consolidated cash and cash equivalents was held at certain foreign subsidiaries that, if repatriated, may be subject to withholding taxes. We expect that there would be no additional tax burden upon repatriation after considering the cash cost associated with any potential withholding taxes.

We believe our existing consolidated *Cash and cash equivalents*, available capacity on our revolving credit facility, and cash generated from continuing operations will be adequate to satisfy working capital needs, fund future growth, meet debt obligations and meet other liquidity requirements for the foreseeable future. At December 31, 2024, our borrowing capacity on our revolving credit facility was \$4,000 and we had no borrowings outstanding. We continue to remain compliant with covenants and do not currently anticipate any events or circumstances that would impact our ability to access funds available on this facility. Refer to Note 20 to the Consolidated Financial Statements for further information on our *Debt*.

Our financial position was as follows:

	At December 31, 2024	At December 31, 2023
Cash and cash equivalents	\$ 3,619	\$ 3,002
Cash and cash equivalents included in assets held for sale ⁽¹⁾	45	—
Available borrowing capacity on revolving credit facilities ⁽²⁾	4,000	3,077
Total liquidity	\$ 7,664	\$ 6,079
Net debt ⁽³⁾	\$ 5,308	\$ 6,434

⁽¹⁾ During the first quarter of 2024, certain non-core assets were determined to meet the criteria for assets held for sale. As a result, the related *Cash and cash equivalents* was reclassified to *Assets held for sale*. Refer to Note 3 to the Consolidated Financial Statements for additional information.

- (2) In connection with the Newcrest transaction, the Company acquired bilateral bank facilities that were repaid in full in the first quarter of 2024. Additionally, the revolving credit facility was amended in February 2024 to increase the available borrowing capacity to \$4,000. Refer to Note 20 to the Consolidated Financial Statements for further information.
- (3) Net debt is a non-GAAP financial measure used by management to evaluate financial flexibility and strength of the Company's balance sheet. Refer to Non-GAAP Financial Measures below.

Cash Flows

	At December 31, 2024	At December 31, 2023
Net cash provided by (used in) operating activities of continuing operations	\$ 6,318	\$ 2,754
Net cash provided by (used in) investing activities of continuing operations	\$ (2,855)	\$ (1,002)
Net cash provided by (used in) financing activities	\$ (2,953)	\$ (1,603)

Net cash provided by (used in) operating activities of continuing operations was \$6,318 in 2024, an increase in cash provided of \$3,564 from the year ended December 31, 2023, primarily due to the impact of sites acquired in the Newcrest transaction, which contributed \$1,562 of cash provided by operating activities. Excluding the impact of the sites acquired in the Newcrest transaction, the increase in cash provided was primarily due to an increase in *Sales* resulting from the reduction of sales in 2023 as a result of the Peñasquito labor strike and higher average realized gold prices in 2024. These inflows were partially offset by an increase in accounts receivable due to the timing of sales and shipments, and a payment of \$291 made in the first quarter for stamp duty tax related to the Newcrest transaction. Refer to Consolidated Financial Results, above, for more information on our *Sales*.

Net cash provided by (used in) investing activities of continuing operations was \$(2,855) in 2024, an increase in cash used of \$1,853 from the year ended December 31, 2023, primarily due to lower net maturities of time deposits, higher capital expenditures in 2024, and cash acquired as a result of the Newcrest transaction in 2023, partially offset by the proceeds from the sale of the assets of Telfer in the fourth quarter of 2024. Refer to Note 3 to the Consolidated Financial Statements for further information on the Telfer sale.

Net cash provided by (used in) financing activities was \$(2,953) in 2024, an increase in cash used of \$1,350 from the year ended December 31, 2023, primarily due to partial redemptions of certain senior notes and repurchases of common stock, partially offset by proceeds received from the issuance of debt and lower dividend payments in 2024. Refer to Note 20 to the Consolidated Financial Statements for additional information on our *Debt* transactions.

Capital Resources

In February 2025, the Board declared a dividend of \$0.25 per share. The declaration and payment of future dividends remains at the full discretion of the Board and will depend on the Company's financial results, cash requirements, future prospects and other factors deemed relevant by the Board.

In February 2024, the Board of Directors authorized a stock repurchase program to repurchase shares of outstanding common stock to provide returns to stockholders, provided that the aggregate value of shares of common stock repurchased under the new program does not exceed \$1 billion. The program will expire after 24 months (in February 2026). In October 2024, the Board of Directors authorized an additional \$2 billion stock repurchase program to repurchase shares of outstanding common stock. The program will expire after 24 months (in October 2026). The programs will be executed at the Company's discretion, utilizing open market repurchases to occur from time to time throughout the authorization period. The repurchase programs may be discontinued at any time, and the programs do not obligate the Company to acquire any specific number of shares of its common stock or to repurchase the full authorized amount during the authorization period. Consequently, the Board of Directors may revise or terminate such share repurchase authorization in the future. For the year ended December 31, 2024, we executed and settled trades totaling \$1,246 of common stock repurchases under the previously authorized program.

Capital Expenditures

Cash generated from operations is used to execute our capital priorities, which include sustaining and developing our global portfolio of long-lived assets. Our near-term development capital projects include Tanami Expansion 2, Ahafo North, and Cadia Panel Caves.

These projects are being funded from existing liquidity and will continue to be funded from future operating cash flows. Capital costs are estimated to be between \$1,700 and \$1,800 for Tanami Expansion 2 with an expected commercial production date in the second half of 2027. Capital costs are estimated to be between \$950 and \$1,050 for Ahafo North with an expected commercial production date in late 2025. Capital costs are estimated to be between \$1,000 and \$1,200 for the PC2-3 Cadia Panel Caves project with development capital costs expected to continue until the second half of 2026.

We consider sustaining capital as those capital expenditures that are necessary to maintain current production and execute the current mine plan. Capital expenditures to develop new operations or related to projects at existing operations, where these projects will enhance production or reserves, are considered non-sustaining or development capital. The Company's decision to

reprioritize, sell or abandon a development project, which may include returning mining concessions to host governments, could result in a future impairment charge.

The Company continues to evaluate strategic priorities and deployment of capital to projects in the pipeline to ensure we execute on our capital priorities and provide long-term value to stockholders. Included in the Company's continuous evaluation is consideration of current market opportunities or pressures. In response, the Company has chosen to continue deferring the investment decision for the Yanacocha Sulfides project. With the delay of the Yanacocha Sulfides project, management will focus its efforts on optimizing its allocation of funds to current operations and other capital commitments, while also assessing execution options and project plans options, up to and including transitioning Yanacocha operations into full closure. Refer to Note 2 to the Consolidated Financial Statements for further discussion. Additionally, the Company has decided to reprioritize capital at Cerro Negro, shifting focus from ongoing underground mine life extension initiatives to surface infrastructure projects at Cerro Negro and other opportunities within its portfolio.

For the years ended December 31, 2024, 2023, and 2022 we had *Additions to property, plant and mine development* as follows:

	2024			2023			2022		
	Development Projects	Sustaining Capital	Total	Development Projects	Sustaining Capital	Total	Development Projects	Sustaining Capital	Total
Brucejack ⁽¹⁾	\$ 3	\$ 67	\$ 70	\$ 1	\$ 21	\$ 22	\$ —	\$ —	\$ —

⁽¹⁾ Sites acquired through the Newcrest transaction. Refer to Note 3 to the Consolidated Financial Statements for further information.

⁽²⁾ Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further discussion of our assets and liabilities held for sale.

⁽³⁾ In the fourth quarter of 2024, the Company completed the sale of the assets of the Telfer reportable segment. Refer to Note 3 to the Consolidated Financial Statements for further information.

For the year ended December 31, 2024, development projects primarily included Red Chris Block Caves, Pamour at Porcupine, Cerro Negro expansions projects, Yanacocha Sulfides, Tanami Expansion 2, Cadia Panel Caves, Phase 14A Wall construction at Lihir, Ahafo North, and the Goldrush Complex at NGM. Development capital costs (excluding capitalized interest) on our Tanami Expansion 2, Ahafo North, and Cadia Panel Caves projects since approval were \$1,020, \$616, and \$248, respectively, of which \$268, \$241, and \$212 related to the year ended December 31, 2024, respectively.

For the year ended December 31, 2023, development projects included Pamour at Porcupine, Cerro Negro expansion projects, Yanacocha Sulfides, Tanami Expansion 2, Cadia Panel Caves, Ahafo North, and the TS Solar Plant and Goldrush Complex at NGM.

For the year ended December 31, 2022, development projects included Pamour at Porcupine, Yanacocha Sulfides, Cerro Negro expansion projects, Tanami Expansion 2 and Power Generation Civil Upgrade at Tanami, Ahafo North and Subika Mining Method Change at Ahafo, and Goldrush Complex and Turquoise Ridge 3rd Shaft at NGM.

The Company will from time to time enter into hedging relationships to mitigate variability in development capital spend denominated in foreign currency. In June 2024, the Company entered into A\$1,126 of AUD-denominated fixed forward contracts, designated as foreign currency cash flow hedges, to mitigate variability in the USD functional cash flows related to the AUD-denominated capital expenditures expected to be incurred between October 2024 and December 2025, related to the construction and development phase of the Tanami Expansion 2, Cadia Panel Caves, and Cadia Tailings projects. The capital expenditures hedged for the Tanami Expansion 2 project under these fixed forward contracts will be for spend not covered by the A\$574 hedges entered into in October 2022. In October 2022, the Company entered into A\$574 of AUD-denominated fixed forward contracts, designated as foreign currency cash flow hedges, to mitigate variability in the USD functional cash flows related to the AUD-denominated capital expenditures expected to be incurred in 2023 and 2024 during the construction and development phase of the Tanami Expansion 2 project. Refer to Note 14 to the Consolidated Financial Statements for further information.

For the years ended December 31, 2024, 2023, and 2022, sustaining capital includes capital expenditures such as tailings facility construction, underground and surface mine development, capital component purchases, mining equipment, reserves drilling conversion, and infrastructure improvements. Additionally, for the year ended December 31, 2023, sustaining capital included haul truck purchases for the Autonomous Haulage System at Boddington. The Company currently expects to incur higher annual sustaining capital spend over the next few years at our ongoing operations, excluding those operations that are designated as held for sale, relative to historical amounts as we continue to advance the critical tailings work at Cadia and strengthen operating efficiency across our portfolio.

For the years ended December 31, 2024, 2023, and 2022, drilling and related costs capitalized and included in mine development costs were as follows:

	Year Ended December 31,		
	2024	2023	2022
Tanami	\$ 61	\$ 65	\$ 60
NGM	19	33	27
Ahafo	14	5	9
Merian	4	1	5
Éléonore ⁽¹⁾	2	3	6
Musselwhite ⁽¹⁾	1	3	4
Cerro Negro	—	13	23
Porcupine ⁽¹⁾	—	4	7
Akyem ⁽¹⁾	—	2	—
Peñasquito	—	1	—
Yanacocha	—	—	3
	<u>\$ 101</u>	<u>\$ 130</u>	<u>\$ 144</u>

⁽¹⁾ Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 to the Consolidated Financial Statements for further discussion of our assets and liabilities held for sale.

During 2024, 2023, and 2022, \$74, \$69, and \$11, respectively, of pre-stripping costs were capitalized and included in mine development costs.

Refer to Note 4 to our Consolidated Financial Statements and Non-GAAP Financial Measures, "All-In Sustaining Costs", below, for further information.

Debt

Debt and Corporate Revolving Credit Facilities. The Company from time to time will redeem its outstanding senior notes ahead of their scheduled maturity dates utilizing *Cash and cash equivalents*. Additionally, depending upon market conditions and strategic considerations, we may choose to refinance debt in the capital markets.

At December 31, 2024, our future debt maturities of \$8,791 of which \$928 has been classified as current based on intent to redeem in the next 12 months. We generally expect to be able to fund maturities of debt from *Net cash provided by (used in) operating activities*, existing cash balances and available credit facilities.

In connection with the Newcrest transaction, the Company acquired bilateral bank debt facilities held with 13 banks. The bilateral bank debt facilities had a total borrowing capacity of \$2,000, of which \$1,923 was outstanding at December 31, 2023, and

\$462 due February 7, 2024, \$769 due March 1, 2024, and \$692 due March 1, 2026. On February 7, 2024, the Company repaid \$462 of the amount outstanding.

On February 15, 2024, the Company completed an amendment and restatement of its existing \$3,000 revolving credit agreement dated as of April 4, 2019 (the "Existing Credit Agreement"). The Existing Credit Agreement was entered into with a syndicate of financial institutions and provided for borrowings in U.S. dollars and contained a letter of credit sub-facility. Per the amendment, the expiration date of the credit facility was extended from March 30, 2026 to February 15, 2029 and the borrowing capacity was increased to \$4,000. Interest is based on Term SOFR plus a credit spread adjustment and margin.

On February 20, 2024, the Company completed a drawdown on the \$4,000 revolving credit agreement and used the proceeds thereof to repay the remaining \$1,461 owed on the remaining bilateral bank debt facilities.

In March 2024, we issued \$2,000 of unsecured Senior Notes comprised of \$1,000 due March 30, 2026 ("2026 Senior Notes") and \$1,000 due March 30, 2034 ("2034 Senior Notes"). Net proceeds from the 2026 and 2034 Senior Notes were \$1,980, which were used to fully repay the drawdown on the revolving credit facility. Interest will be paid semi-annually at a rate of 5.30% and 5.35% per annum for the 2026 and the 2034 Senior Notes, respectively.

In 2024, the Company redeemed an aggregate amount of \$483 of certain Senior Notes, resulting in a gain on extinguishment of \$38, partially offset by the acceleration of \$6 loss from *Accumulated other comprehensive income (loss)* related to the previously terminated interest rate cash flow hedges, recognized in *Other income (loss), net* for the year ended December 31, 2024.

In February 2025, the Company fully redeemed all of the outstanding 2026 Senior Notes for a redemption price of \$957. The redemption price equaled the principal amount of the outstanding 2026 Senior Notes of \$928 plus accrued and unpaid interest of \$19 in accordance with the terms of the 2026 Notes, and a make-whole provision of \$10.

Refer to Note 20 to the Consolidated Financial Statements for more information.

Debt Covenants

Our senior notes and revolving credit facilities contain various covenants and default provisions including payment defaults, limitation on liens, leases, sales and leaseback agreements and merger restrictions. Furthermore, our senior notes and corporate revolving credit facility contain covenants that include, limiting the sale of all or substantially all of our assets, certain change of control provisions and a negative pledge on certain assets.

The corporate revolving credit facility contains a financial ratio covenant requiring us to maintain a net debt (total debt net of *Cash and cash equivalents*) to total capitalization ratio of less than or equal to 62.50% in addition to the covenants noted above.

At December 31, 2024, we were in compliance with all existing debt covenants and provisions related to potential defaults.

Letters of Credit and Other Guarantees

We have off-balance sheet arrangements of \$2,086 of outstanding surety bonds, bank letters of credit and bank guarantees (refer to Note 25 to the Consolidated Financial Statements). At December 31, 2024, none of the \$4,000 corporate revolving credit facility was used to secure the issuance of letters of credit. Refer to Note 20 to the Consolidated Financial Statements for additional information.

Co-Issuer and Supplemental Guarantor Information

The Company filed a shelf registration statement with the SEC on Form S-3 under the Securities Act, of 1933, as amended, which enables us to issue an indeterminate number or amount of common stock, preferred stock, depository shares, debt securities, guarantees of debt securities, warrants and units (the "Shelf Registration Statement"). Under the Shelf Registration Statement, our debt securities may be guaranteed by Newmont USA Limited ("Newmont USA"), one of our consolidated subsidiaries.

Newmont and Newcrest Finance, as issuers, and Newmont USA, as guarantor, are collectively referred to herein as the "Obligor Group".

These guarantees are full and unconditional, and none of our other subsidiaries guarantee any security issued and outstanding. The cash provided by operations of the Obligor Group, and all of its subsidiaries, is available to satisfy debt repayments as they become due, and there are no material restrictions on the ability of the Obligor Group to obtain funds from subsidiaries by dividend, loan, or otherwise, except to the extent of any rights, noncontrolling interests, foreign currency or regulatory restrictions limiting repatriation of cash. Net assets attributable to noncontrolling interests were \$181 at December 31, 2024. All noncontrolling interests relate to non-guarantor subsidiaries.

Newmont and Newmont USA are primarily holding companies with no material operations, sources of income or assets other than equity interest in their subsidiaries and intercompany receivables or payables. Newcrest Finance is a finance subsidiary with no material assets or operations other than those related to issued external debt. Newmont USA's primary investments are comprised of

its 38.5% interest in NGM. For further information regarding these and our other operations, refer to Note 4 to the Consolidated Financial Statements and Results of Consolidated Operations within Part II, Item 7, MD&A.

In addition to equity interests in subsidiaries, the Obligor Group's balance sheets consisted primarily of the following intercompany assets, intercompany liabilities, and external debt. The remaining assets and liabilities of the Obligor Group are considered immaterial at December 31, 2024.

	December 31, 2024	
	Obligor Group	Newmont USA
Current intercompany assets	\$ 19,387	\$ 12,147
Non-current intercompany assets	\$ 531	\$ 470
Current intercompany liabilities	\$ 19,964	\$ 1,564
Current external debt	\$ 924	\$ —
Non-current external debt	\$ 7,546	\$ —

Newmont USA's subsidiary guarantees (the "subsidiary guarantees") are general unsecured senior obligations of Newmont USA and rank equal in right of payment to all of Newmont USA's existing and future senior unsecured indebtedness and senior in right of payment to all of Newmont USA's future subordinated indebtedness. The subsidiary guarantees are effectively junior to any secured indebtedness of Newmont USA to the extent of the value of the assets securing such indebtedness.

At December 31, 2024, Newmont USA had approximately \$8,470 of consolidated indebtedness (including guaranteed debt), all of which relates to the guarantees of indebtedness of Newmont.

Under the terms of the subsidiary guarantees, holders of Newmont's securities subject to such subsidiary guarantees will not be required to exercise their remedies against Newmont before they proceed directly against Newmont USA.

Newmont USA will be released and relieved from all its obligations under the subsidiary guarantees in certain specified circumstances, including, but not limited to, the following:

- upon the sale or other disposition (including by way of consolidation or merger), in one transaction or a series of related transactions, of a majority of the total voting power of the capital stock or other interests of Newmont USA (other than to Newmont or any of Newmont's affiliates);
- upon the sale or disposition of all or substantially all the assets of Newmont USA (other than to Newmont or any of Newmont's affiliates); or
- upon such time as Newmont USA ceases to guarantee more than \$75 aggregate principal amount of Newmont's debt (at December 31, 2024, Newmont USA guaranteed \$600 aggregate principal amount of debt of Newmont that did not contain a similar fall-away provision).

Newmont's debt securities are effectively junior to any secured indebtedness of Newmont to the extent of the value of the assets securing such indebtedness, and structurally subordinated to all debt and other liabilities of Newmont's non-guarantor subsidiaries. At December 31, 2024, (i) Newmont's total consolidated indebtedness was approximately \$8,972, none of which was secured (other than \$496 of *Lease and other financing obligations*), and (ii) Newmont's non-guarantor subsidiaries had \$8,867 of total liabilities (including trade payables, but excluding intercompany, external debt, and reclamation and remediation liabilities), which would have been structurally senior to Newmont's debt securities.

For further information on our debt, refer to Note 20 to the Consolidated Financial Statements.

Contractual Obligations

Our contractual obligations at December 31, 2024 are summarized as follows:

Contractual Obligations	Payments Due by Period		
	Total	Current	Non-Current
Debt ⁽¹⁾	\$ 13,271	\$ 1,321	\$ 11,950
Finance lease and other financing obligations ⁽²⁾	661	117	544
Remediation and reclamation liabilities ⁽³⁾	11,613	1,042	10,571
Employee-related benefits ⁽⁴⁾	974	236	738
Uncertain income tax liabilities and interest ⁽⁵⁾	125	—	125
Operating leases and other obligations ⁽⁶⁾	99	20	79
Minimum royalty payments ⁽⁷⁾	61	48	13
Purchase obligations ⁽⁸⁾	1,233	441	792
Other ⁽⁹⁾	517	223	294
	<u>\$ 28,554</u>	<u>\$ 3,448</u>	<u>\$ 25,106</u>

(1) Debt includes principal of \$8,791 on Senior Notes and estimated interest payments of \$4,480 on Senior Notes, assuming no early extinguishment.

(2) Finance lease and other financing obligations includes finance lease payments of \$658 and additional payments of \$3 for finance leases that have not yet commenced.

(3) Mining operations are subject to extensive environmental regulations in the jurisdictions in which they operate. Pursuant to environmental regulations, we are required to close our operations and reclaim and remediate the lands that operations have disturbed. The estimated undiscounted cash outflows of these *Reclamation and remediation liabilities* are reflected here. For more information regarding reclamation and remediation liabilities, refer to Note 6 to the Consolidated Financial Statements.

(4) Contractual obligations for *Employee-related benefits* include severance, workers' participation, pension and other benefit plans. Pension plan and other benefit payments beyond 2034 cannot be reasonably estimated given variable market conditions and actuarial assumptions and are not included.

(5) We are unable to reasonably estimate the timing of our uncertain income tax liabilities and interest payments due to uncertainties in the timing of the effective settlement of tax positions.

(6) Operating lease and other obligations includes operating lease payments of \$99 and additional payments of \$— for operating leases that have not yet commenced.

(7) Minimum royalty payments are related to continuing operations and are presented net of recoverable amounts.

(8) Purchase obligations are not recorded in the Consolidated Financial Statements. Purchase obligations represent contractual obligations for purchase of power, materials and supplies, consumables, inventories and capital projects.

(9) Other includes service contracts and other obligations not recorded in our Consolidated Financial Statements, as well as the obligation related to the funding of Barrick's portion of pre-feasibility costs associated with Norte Abierto deferred payment obligations accrued in *Other current liabilities* and *Other non-current liabilities*.

Environmental

Our mining and exploration activities are subject to various federal and state laws and regulations governing the protection of the environment. We have made, and expect to make in the future, expenditures to comply with such laws and regulations, but cannot predict the full amount of such future expenditures. We perform a comprehensive review of our reclamation and remediation liabilities annually and review changes in facts and circumstances associated with these obligations at least quarterly. Newmont is committed to the implementation of the GISTM and the disclosure of implementation status for tailings facilities by August 2025. Conformance with the GISTM is on-going and has and may continue to result in further increases to our estimated sustaining costs and closure costs for existing operations and non-operating sites. Additionally, laws, regulations and permit requirements focused on water management and discharge requirements for operations and water treatment in connection with closure are becoming increasingly stringent. Compliance with water management and discharge quality remains dynamic and has and may continue to result in further increases to our estimated closure costs.

At December 31, 2024 and 2023, \$7,015 and \$8,385, respectively, were accrued for reclamation costs relating to currently or recently producing or development stage mineral properties, of which \$928 and \$558, respectively, were classified as current liabilities.

In addition, we are involved in several matters concerning environmental obligations associated with former, primarily historical, mining activities. Based upon our best estimate of our liability for these matters, \$370 and \$401 were accrued for such obligations at December 31, 2024 and 2023, respectively, of which \$63 and \$61, respectively, were classified as current liabilities. We spent \$82, \$44, and \$56 during 2024, 2023, and 2022, respectively, for environmental obligations related to the former mining activities.

Reclamation and remediation adjustments during 2024 primarily related to decrease spend at portions of the Yanacocha site that are no longer in production and with no expected substantive economic value (i.e., non-operating) as a result of updated cost estimates. Newmont anticipates spending an average of \$600 annually over the next two years on water treatment plants at

Yanacocha, with expenditures expected to decline starting in 2027 upon project completion and in line with the regulatory compliance commitment. Yanacocha's ongoing closure planning studies continue to address several complex closure issues, including water management, social impacts and tailings. The long-term water management solution under construction at Yanacocha will replace five existing water treatment facilities with two, addressing the watersheds along the continental divide.

Reclamation and remediation adjustments during 2023 primarily related to (i) increased water management costs at portions of our Yanacocha and Porcupine site operations that are non-operating (ii) increased costs due to closure plan design changes at our Porcupine site operations (iii) higher waste disposal costs and project execution delays at the Midnite mine and Dawn mill sites and (iv) higher estimated closure costs due to cost inflation.

During the year ended December 31, 2024, 2023, and 2022, capital expenditures were approximately \$35, \$41, and \$29, respectively, to comply with environmental regulations.

Our sustainability strategy is a foundational element in achieving our purpose to create value and improve lives through sustainable and responsible mining. Sustainability and safety are integrated into the business at all levels of the organization through our global policies, standards, strategies, business plans and remuneration plans. For more information on the Company's reclamation and remediation liabilities, refer to Notes 6 and 25 to the Consolidated Financial Statements. For discussion of regulatory, tailings, water, climate and other environmental risks, refer to Part I, Item 1A. Risk Factors, for additional information.

Forward-Looking Statements

The foregoing discussion and analysis, as well as certain information contained elsewhere in this Annual Report, contain "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, and are intended to be covered by the safe harbor created thereby. For a more detailed discussion of risks and other factors that might impact forward-looking statements and other important information about forward-looking statements, refer to the discussion in Forward-Looking Statements in Part I, Item 1, Business and Part I, Item 1A, Risk Factors.

Non-GAAP Financial Measures

Non-GAAP financial measures are intended to provide additional information only and do not have any standard meaning prescribed by GAAP. These measures should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. Unless otherwise noted, we present the non-GAAP financial measures of our continuing operations in the tables below. For additional information regarding our discontinued operations, refer to Note 1 to the Consolidated Financial Statements.

Earnings before interest, taxes and depreciation and amortization and Adjusted earnings before interest, taxes and depreciation and amortization

Management uses earnings before interest, taxes and depreciation and amortization ("EBITDA") and EBITDA adjusted for non-core or certain items that have a disproportionate impact on our results for a particular period ("Adjusted EBITDA") as non-GAAP measures to evaluate the Company's operating performance. EBITDA and Adjusted EBITDA do not represent, and should not be considered an alternative to, net income (loss), operating income (loss), or cash flow from operations as those terms are defined by GAAP, and do not necessarily indicate whether cash flows will be sufficient to fund cash needs. Although Adjusted EBITDA and similar measures are frequently used as measures of operations and the ability to meet debt service requirements by other companies, our calculation of Adjusted EBITDA is not necessarily comparable to such other similarly titled captions of other companies. The Company believes that Adjusted EBITDA provides useful information to investors and others in understanding and evaluating our operating results in the same manner as our management and Board of Directors. Management's determination of the components of Adjusted EBITDA are evaluated periodically and based, in part, on a review of non-GAAP financial measures used by mining industry analysts. *Net income (loss) attributable to Newmont stockholders* is reconciled to EBITDA and Adjusted EBITDA as follows:

	Year Ended December 31,		
	2024	2023	2022
Net income (loss) attributable to Newmont stockholders	\$ 3,348	\$ (2,494)	\$ (429)
Net income (loss) attributable to noncontrolling interests	33	27	60
Net (income) loss from discontinued operations ⁽¹⁾	(68)	(27)	(30)
Equity loss (income) of affiliates	(133)	(63)	(107)
Income and mining tax expense (benefit)	1,397	526	455
Depreciation and amortization	2,576	2,108	2,185
Interest expense, net of capitalized interest	375	243	227
EBITDA	\$ 7,528	\$ 320	\$ 2,361
Adjustments:			
Loss on assets held for sale ⁽²⁾	\$ 1,114	\$ —	\$ —
Impairment charges ⁽³⁾	78	1,891	1,320
Newcrest transaction and integration costs ⁽⁴⁾	72	464	—
Reclamation and remediation charges ⁽⁵⁾	(71)	1,260	713
Change in fair value of investments and options ⁽⁶⁾	(62)	47	46
Settlement costs ⁽⁷⁾	44	7	22
Restructuring and severance ⁽⁸⁾	38	24	4
(Gain) loss on asset and investment sales ⁽⁹⁾	(35)	197	(35)
Gain on debt extinguishment ⁽¹⁰⁾	(32)	—	—
Pension settlements ⁽¹¹⁾	1	9	137
COVID-19 specific costs ⁽¹²⁾	—	1	3
Other ⁽¹³⁾	—	(5)	(21)
Adjusted EBITDA	\$ 8,675	\$ 4,215	\$ 4,550

⁽¹⁾ For additional information regarding our discontinued operations, refer to Note 1 to our Consolidated Financial Statements.

⁽²⁾ Loss on assets held for sale, included in *Loss on assets held for sale*, represents the loss recorded to recognize the six non-core assets and the development project designated as held for sale at the lower of carrying value or fair value in 2024. Refer to Note 3 of the Consolidated Financial Statements for further information.

⁽³⁾ Impairment charges, included in *Impairment charges*, represents non-cash write-downs of long-lived assets and goodwill. Refer to Note 7 to our Consolidated Financial Statements for further information.

⁽⁴⁾ Newcrest transaction and integration costs, included in *Other expense, net*, represents costs incurred related to Newmont's acquisition of Newcrest completed in 2023 as well as subsequent integration costs. For the year ended December 31, 2023, these costs primarily include \$316 related to the stamp duty tax incurred in connection with the transaction.

⁽⁵⁾ Reclamation and remediation charges, included in *Reclamation and remediation*, represents revisions to the reclamation and remediation plans and cost estimates at the Company's former operating properties and historic mining operations that have entered the closure phase and have no substantive future economic value. For additional information, refer to Note 6 in the Consolidated Financial Statements.

⁽⁶⁾ Change in fair value of investments and options, included in *Other income (loss), net*, primarily represents unrealized gains and losses related to the Company's investments in current and non-current marketable and other equity securities. For additional information regarding our investments, refer to Note 15 to our Consolidated Financial Statements.

⁽⁷⁾ Settlement costs, included in *Other expense, net*, primarily represents wind-down and demobilization costs related to the French Guiana project in 2024; costs related to additional employee related accruals as a result of the Australian Fair Work legislation in 2023; and a legal settlement and a voluntary contribution made to support humanitarian efforts in Ukraine in 2022.

⁽⁸⁾ Restructuring and severance, included in *Other expense, net*, primarily represents severance and related costs associated with significant organizational and operating model changes implemented by the Company for all periods presented.

⁽⁹⁾ (Gain) loss on asset and investment sales, included in *Other income (loss), net*, primarily represents the loss on the abandonment of the near-pit sizing and conveying system at Peñasquito, partially offset by the gain recognized on the sale of the Streaming Credit Facility Agreement ("SCFA") in 2024; the impairment loss on the abandonment of the pyrite leach plant at Peñasquito offset by the net gain recognized on the exchange of Maverix shares and warrants to Triple flag and the subsequent sale of Triple Flag shares in 2023; and gains recognized on the sale of the investment in Minera Agua Rica Alumbreira Limited ("MARA"), on disposal of trucks at Boddington, and the sale of royalty interests at NGM, partially offset by the loss recognized on the sale of the La Zanja equity method investment in 2022. For additional information, refer to Note 9 to our Consolidated Financial Statements.

⁽¹⁰⁾ Gain on debt extinguishment, included in *Other income (loss), net*, primarily represents the net gain on the partial redemption of certain Senior Notes and losses on the debt tender offer and subsequent extinguishment of the 2023 Newmont Senior Notes in 2024. Refer to Note 20 to our Consolidated Financial Statements.

⁽¹¹⁾ Pension settlements, included in *Other income (loss), net*, primarily represents pension settlement charges related to lump sum payments to participants in 2024, lump sum payments to participants in 2023, and the annuitization of certain defined benefit plans and lump sum payments to participants in 2022. Refer to Note 11 to our Consolidated Financial Statements for further information.

⁽¹²⁾ COVID-19 specific costs, included in *Other expense, net*, primarily includes amounts distributed from Newmont Global Community Support Fund to help host communities, governments and employees combat the COVID-19 pandemic for all periods presented and includes incremental direct costs incurred as a result of actions taken to protect against the impacts of the COVID-19 pandemic. Refer to Note 8 to our Consolidated Financial Statements for further information.

⁽¹³⁾ Other, included in *Other income (loss), net*, in 2023 represents income received during the first quarter of 2023 on the favorable settlement of certain matters that were outstanding at the time of sale of the related investment in 2022. Amounts related to 2022 are primarily comprised of a reimbursement of certain historical Goldcorp operational expenses related to a legacy project that reached commercial production in the second quarter of 2022 and penalty income from an energy vendor early terminating a contract in 2022.

Adjusted Net Income (Loss)

Management uses Adjusted net income (loss) to evaluate the Company's operating performance and for planning and forecasting future business operations. The Company believes the use of Adjusted net income (loss) allows investors and analysts to understand the results of the continuing operations of the Company and its direct and indirect subsidiaries relating to the sale of products, by excluding certain items that have a disproportionate impact on our results for a particular period. Adjustments to continuing operations are presented before tax and net of our partners' noncontrolling interests, when applicable. The tax effect of adjustments is presented in the Tax effect of adjustments line and is calculated using the applicable tax rate. Management's determination of the components of Adjusted net income (loss) are evaluated periodically and based, in part, on a review of non-GAAP financial measures used by mining industry analysts. *Net income (loss) attributable to Newmont stockholders* is reconciled to Adjusted net income (loss) as follows:

	Year Ended December 31, 2024			
	per share data ⁽¹⁾			
	basic		diluted	
Net income (loss) attributable to Newmont stockholders	\$	3,348	\$	2.92
Net loss (income) attributable to Newmont stockholders from discontinued operations ⁽²⁾		(68)		(0.06)
Net income (loss) attributable to Newmont stockholders from continuing operations		3,280		2.86
Loss on assets held for sale ⁽³⁾		1,114		0.97
Impairment charges ⁽⁴⁾		78		0.07
Newcrest transaction and integration costs ⁽⁵⁾		72		0.06
Reclamation and remediation charges ⁽⁶⁾		(71)		(0.06)
Change in fair value of investments and options ⁽⁷⁾		(62)		(0.05)

Adjusted net income (loss)	\$	3,991	\$	3.48
Weighted average common shares (millions): ⁽¹⁵⁾				1,148

⁽¹⁾ Per share measures may not recalculate due to rounding.

⁽²⁾ For additional information regarding our discontinued operations, refer to Note 1 to our Consolidated Financial Statements.

⁽³⁾ Loss on assets held for sale, included in *Loss on assets held for sale*, represents the loss recorded to recognize the six non-core assets and the development project designated as held for sale at the lower of carrying value or fair value in 2024. Refer to Note 3 of the Consolidated Financial Statements for further information.

⁽⁴⁾ Impairment charges, included in *Impairment charges*, represents non-cash write-downs of long-lived assets. Refer to Note 7 to our Consolidated Financial Statements for further information.

⁽⁵⁾ Newcrest transaction and integration costs, included in *Other expense, net*, represents costs incurred related to Newmont's acquisition of Newcrest completed in 2023 as well as subsequent integration costs.

⁽⁶⁾ Reclamation and remediation charges, net, included in *Reclamation and remediation*, represents revisions to the reclamation and remediation plans and cost estimates at the Company's former operating properties and historic mining operations that have entered the closure phase and have no substantive future economic value. Refer to Note 6 to our Consolidated Financial Statements for further information.

⁽⁷⁾ Change in fair value of investments and options, included in *Other income (loss), net*, primarily represents unrealized gains and losses related to the Company's investment in current and non-current marketable and other equity securities. For additional information regarding our investments, refer to Note 15 to our Consolidated Financial Statements.

⁽⁸⁾ Settlement costs, included in *Other expense, net*, primarily represents wind-down and demobilization costs related to the French Guiana project.

⁽⁹⁾ Restructuring and severance, included in *Other expense, net*, primarily represents severance and related costs associated with significant organizational and operating model changes implemented by the Company.

⁽¹⁰⁾ (Gain) loss on asset and investment sales, included in *Other income (loss), net*, primarily represents the loss on the abandonment of the near-pit sizing and conveying system at Peñasquito, partially offset by the gain recognized on the sale of the Streaming Credit Facility Agreement ("SCFA") in 2024. For additional information, refer to Note 9 to our Consolidated Financial Statements.

- (11) Gain on debt extinguishment, included in *Other income (loss), net*, primarily represents the net gain on the partial redemption of certain Senior Notes and losses on the debt tender offer and subsequent extinguishment of the 2023 Newmont Senior Note in 2024. Refer to Note 20 to our Consolidated Financial Statements.
- (12) Pension settlements, included in *Other income (loss), net*, primarily represents pension settlement charges related to lump sum payments to participants. Refer to Note 11 to our Consolidated Financial Statements for further information.
- (13) The tax effect of adjustments, included in *Income and mining tax benefit (expense)*, represents the tax effect of adjustments in footnotes (3) through (12), as described above, and are calculated using the applicable tax rate.
- (14) Valuation allowance and other tax adjustments, included in *Income and mining tax benefit (expense)*, is recorded for items such as foreign tax credits, alternative minimum tax credits, capital losses, disallowed foreign losses, and the effects of changes in foreign currency exchange rates on deferred tax assets and deferred tax liabilities. The adjustment reflects the net increase or (decrease) to net operating losses, capital losses, tax credit carryovers, and other deferred tax assets subject to valuation allowance of \$(302), the effects of changes in foreign exchange rates on deferred tax assets and liabilities of \$(30), net reductions to the reserve for uncertain tax positions of \$(63), recording of a deferred tax liability for the outside basis difference at Akyem of \$49 due to the status change to held for sale, and other tax adjustments of \$225.
- (15) Adjusted net income (loss) per diluted share is calculated using diluted common shares, which are calculated in accordance with GAAP.

	Year Ended December 31, 2023		
	per share data ⁽¹⁾		
	basic	diluted	
Net income (loss) attributable to Newmont stockholders	\$ (2,494)	\$ (2.97)	\$ (2.97)

Adjusted net income (loss)	\$ 1,324	\$ 1.57	\$ 1.57
Weighted average common shares (millions): ⁽³⁾		841	841

- (1) Per share measures may not recalculate due to rounding.
- (2) For additional information regarding our discontinued operations, refer to Note 1 to our Consolidated Financial Statements.
- (3) Adjusted net income (loss) per diluted share is calculated using diluted common shares, which are calculated in accordance with GAAP. For the year ended December 31, 2023, potentially dilutive shares, which were insignificant, were excluded from the computation of diluted loss per common share attributable to Newmont stockholders in the Consolidated Statement of Operations as they were antidilutive. These shares were included in the computation of adjusted net income per diluted share for the year ended December 31, 2023.
- (4) Impairment charges, net, included in *Impairment charges* represents non-cash write-downs of long-lived assets and goodwill. Refer to Note 7 to our Consolidated Financial Statements for further information. Amount is presented net of pre-tax income (loss) attributable to noncontrolling interests of \$(3).
- (5) Reclamation and remediation charges, included in *Reclamation and remediation*, represents revisions to the reclamation and remediation plans and cost estimates at the Company's former operating properties and historic mining operations that have entered the closure phase and have no substantive future economic value. Refer to Note 6 to our Consolidated Financial Statements for further information.
- (6) Newcrest transaction and integration costs, included in *Other expense, net*, represents costs incurred related to Newmont's acquisition of Newcrest completed in 2023 as well as subsequent integration costs. These costs primarily include \$316 in relation to the stamp duty tax incurred in connection with the transaction.
- (7) (Gain) loss on asset and investment sales, included in *Other income (loss), net*, primarily represents the loss on the abandonment of the pyrite leach plant at Peñasquito offset by the net gain recognized on the exchange of Maverix shares and warrants to Triple flag and the subsequent sale of Triple Flag shares. For additional information, refer to Note 9 to our Consolidated Financial Statements.
- (8) Change in fair value of investments, included in *Other income (loss), net*, primarily represents unrealized gains and losses related to the Company's investment in current and non-current marketable and other equity securities. For additional information regarding our investments, refer to Note 15 to our Consolidated Financial Statements.
- (9) Restructuring and severance, included in *Other expense, net*, primarily represents severance and related costs associated with significant organizational and operating model changes implemented by the Company.
- (10) Pension settlements, included in *Other income (loss), net*, represents pension settlement charges related to lump sum payments to participants. Refer to Note 11 to our Consolidated Financial Statements for further information.

- (11) Settlement costs, included in *Other expense, net*, primarily represents costs related to additional employee related accruals as a result of the Australian Fair Work legislation.
- (12) COVID-19 specific costs, included in *Other expense, net*, represents amounts distributed from the Newmont Global Community Fund to help host communities, governments and employees combat the COVID-19 pandemic. Adjusted net income (loss) has not been adjusted for \$1 of incremental COVID-19 costs incurred as a result of actions taken to protect against the impacts of the COVID-19 pandemic at our operational sites. Refer to Note 8 to our Consolidated Financial Statements for further information.
- (13) Other, included in *Other income (loss), net*, primarily represents income received during the first quarter of 2023 on the favorable settlement of certain matters that were outstanding at the time of sale of the related investment in 2022.
- (14) The tax effect of adjustments, included in *Income and mining tax benefit (expense)*, represents the tax effect of adjustments in footnotes (4) through (13), as described above, and are calculated using the applicable tax rate.
- (15) Valuation allowance and other tax adjustments, included in *Income and mining tax benefit (expense)*, is recorded for items such as foreign tax credits, alternative minimum tax credits, capital losses, disallowed foreign losses, and the effects of changes in foreign currency exchange rates on deferred tax assets and deferred tax liabilities. The adjustment reflects the net increase or (decrease) to net operating losses, capital losses, tax credit carryovers, and other deferred tax assets subject to valuation allowance of \$357, the effects of changes in foreign exchange rates on deferred tax assets and liabilities of \$(3), net removal to the reserve for uncertain tax positions of \$(28), and other tax adjustments of \$240.

Adjusted net income (loss)	<u>\$ 1,468</u>	<u>\$ 1.85</u>	<u>\$ 1.85</u>	
Weighted average common shares (millions): ⁽³⁾		794	795	

(1) Per share measures may not recalculate due to rounding.

(2) For additional information regarding our discontinued operations, refer to Note 1 to our Consolidated Financial Statements.

(3) Adjusted net income (loss) per diluted share is calculated using diluted common shares, which are calculated in accordance with GAAP. For the year ended December 31, 2022, potentially dilutive shares of 1 million were excluded from the computation of diluted loss per common share attributable to Newmont stockholders in the Consolidated Statement of Operations as they were antidilutive. These shares were included in the computation of adjusted net income per diluted share for the year ended December 31, 2022.

(4) Impairment charges, included in *Impairment charges* represents non-cash write-downs of long-lived assets and goodwill. Refer to Note 7 to our Consolidated Financial Statements for further information.

(5) Reclamation and remediation charges, included in *Reclamation and remediation*, represent revisions to reclamation and remediation plans and cost estimates at the Company's former operating properties and historic mining operations that have entered the closure phase and have no substantive future economic value. Refer to Note 6 to our Consolidated Financial Statements for further information.

(6) Pension settlements, included in *Other income (loss), net*, represents pension settlement charges related to the annuitization of certain defined benefit plans. Refer to Note 11 to our Consolidated Financial Statements for further information.

(7) Change in fair value of investments, included in *Other income (loss), net*, primarily represents unrealized gains and losses related to the Company's investment in current and non-current marketable and other equity securities. For additional information regarding our investments, refer to Note 15 to our Consolidated Financial Statements.

(8) (Gain) loss on asset and investment sales, included in *Other income (loss), net*, primarily represents gains recognized on the sale of the investment in MARA, disposal of trucks at Boddington, and the sale of royalty interests at NGM, partially offset by the loss recognized on the sale of the La Zanja equity method investment. For additional information, refer to Note 9 to our Consolidated Financial Statements.

(9) Settlement costs, included in *Other expense, net*, primarily represents a legal settlement and a voluntary contribution made to support humanitarian efforts in Ukraine.

(10) Restructuring and severance, included in *Other expense, net*, primarily represents severance and related costs associated with significant organizational and operating model changes implemented by the Company.

(11) COVID-19 specific costs, included in *Other expense, net*, represents amounts distributed from the Newmont Global Community Fund to help host communities, governments and employees combat the COVID-19 pandemic. Adjusted net income (loss) has not been adjusted for \$35 of

incremental COVID-19 costs incurred as a result of actions taken to protect against the impacts of the COVID-19 pandemic at our operational sites. Refer to Note 8 to our Consolidated Financial Statements for further information.

- (12) Other, included *Other income (loss), net*, primarily represents a \$11 reimbursement of certain historical Goldcorp operational expenses related to a legacy project that reached commercial production in the second quarter of 2022 and \$7 of penalty income from an energy vendor early terminating a contract in 2022.
- (13) The tax effect of adjustments, included in *Income and mining tax benefit (expense)*, represents the tax effect of adjustments in footnotes (4) through (12), as described above, and are calculated using the applicable tax rate.
- (14) Valuation allowance and other tax adjustments, included in *Income and mining tax benefit (expense)*, is recorded for items such as foreign tax credits, alternative minimum tax credits, capital losses, disallowed foreign losses, and the effects of changes in foreign currency exchange rates on deferred tax assets and deferred tax liabilities. The adjustment reflects the net increase or (decrease) to net operating losses, capital losses, tax credit carryovers, and other deferred tax assets subject to valuation allowance of \$246, the expiration of U.S. foreign tax credit carryovers of \$31, the effects of changes in foreign exchange rates on deferred tax assets and liabilities of \$(86), net removal to the reserve for uncertain tax positions of \$(8), a tax settlement in Mexico of \$(125) and other tax adjustments of \$24. Total amount is presented net of income (loss) attributable to noncontrolling interests of \$82.

Free Cash Flow

Management uses Free Cash Flow as a non-GAAP measure to analyze cash flows generated from operations. Free Cash Flow is *Net cash provided by (used in) operating activities less Net cash provided by (used in) operating activities of discontinued operations less Additions to property, plant and mine development* as presented on the Consolidated Statements of Cash Flows. The Company believes Free Cash Flow is also useful as one of the bases for comparing the Company's performance with its competitors. Although Free Cash Flow and similar measures are frequently used as measures of cash flows generated from operations by other companies, the Company's calculation of Free Cash Flow is not necessarily comparable to such other similarly titled captions of other companies.

The presentation of non-GAAP Free Cash Flow is not meant to be considered in isolation or as an alternative to net income as an indicator of the Company's performance, or as an alternative to cash flows from operating activities as a measure of liquidity as those terms are defined by GAAP, and does not necessarily indicate whether cash flows will be sufficient to fund cash needs. The Company's definition of Free Cash Flow is limited in that it does not represent residual cash flows available for discretionary expenditures due to the fact that the measure does not deduct the payments required for debt service and other contractual obligations or payments made for business acquisitions. Therefore, the Company believes it is important to view Free Cash Flow as a measure that provides supplemental information to the Company's Consolidated Statements of Cash Flows.

The following table sets forth a reconciliation of Free Cash Flow, a non-GAAP financial measure, to *Net cash provided by (used in) operating activities*, which the Company believes to be the GAAP financial measure most directly comparable to Free Cash Flow, as well as information regarding *Net cash provided by (used in) investing activities* and *Net cash provided by (used in) financing activities*.

	Year Ended December 31,		
	2024	2023	2022
Net cash provided by (used in) operating activities	\$ 6,363	\$ 2,763	\$ 3,220
Less: Net cash used in (provided by) operating activities of discontinued operations	(45)	(9)	(22)
Net cash provided by (used in) operating activities of continuing operations	6,318	2,754	3,198
Less: Additions to property, plant and mine development	(3,402)	(2,666)	(2,131)
Free Cash Flow	\$ 2,916	\$ 88	\$ 1,067
Net cash provided by (used in) investing activities ⁽¹⁾	\$ (2,702)	\$ (1,002)	\$ (2,983)
Net cash provided by (used in) financing activities	\$ (2,953)	\$ (1,603)	\$ (2,356)

⁽¹⁾ *Net cash provided by (used in) investing activities* includes *Additions to property, plant and mine development*, which is included in the Company's computation of Free Cash Flow.

Net Debt

Management uses Net Debt to measure the Company's liquidity and financial position. Net Debt is calculated as *Debt and Lease and other financing obligations less Cash and cash equivalents*, as presented on the Consolidated Balance Sheets. *Cash and cash equivalents* are subtracted from *Debt and Lease and other financing obligations* as these could be used to reduce the Company's debt obligations. The Company believes the use of Net Debt allows investors and others to evaluate financial flexibility and strength of the Company's balance sheet. Net Debt is intended to provide additional information only and does not have any standardized meaning prescribed by GAAP and should not be considered in isolation or as a substitute for measures of liquidity prepared in accordance with GAAP. Other companies may calculate this measure differently.

The following table sets forth a reconciliation of Net Debt, a non-GAAP financial measure, to *Debt and Lease and other financing obligations*, which the Company believes to be the GAAP financial measures most directly comparable to Net Debt.

	At December 31, 2024	At December 31, 2023
Debt	\$ 8,476	\$ 8,874
Lease and other financing obligations	496	562
Less: Cash and cash equivalents	(3,619)	(3,002)
Less: Cash and cash equivalents included in assets held for sale ⁽¹⁾	(45)	—
Net debt	<u>\$ 5,308</u>	<u>\$ 6,434</u>

⁽¹⁾ During the first quarter of 2024, certain non-core assets were determined to meet the criteria for assets held for sale. As a result, the related *Cash and cash equivalents* was reclassified to *Assets held for sale*. Refer to Note 3 to the Consolidated Financial Statements for additional information.

Costs Applicable to Sales per Ounce/Gold Equivalent Ounce

Costs applicable to sales per ounce/gold equivalent ounce are non-GAAP financial measures. These measures are calculated by dividing the costs applicable to sales of gold and other metals by gold ounces or gold equivalent ounces sold, respectively. These measures are calculated for the periods presented on a consolidated basis. We believe that these measures provide additional information to management, investors and others that aids in the understanding of the economics of our operations and performance compared to other producers and provides investors visibility into the direct and indirect costs related to production, excluding depreciation and amortization, on a per ounce/gold equivalent ounce basis. Costs applicable to sales per ounce/gold equivalent ounce statistics are intended to provide additional information only and do not have any standardized meaning prescribed by GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP. Other companies may calculate these measures differently.

The following tables reconcile these non-GAAP measures to the most directly comparable GAAP measures.

	Gold ⁽¹⁾			GEO ⁽²⁾		
	Year Ended December 31,			Year Ended December 31,		
	2024	2023	2022	2024	2023	2022
Costs applicable to sales ⁽³⁾	\$ 7,364	\$ 5,689	\$ 5,423	\$ 1,599	\$ 1,010	\$ 1,045
Gold/GEO sold (thousand ounces) ⁽⁴⁾	6,539	5,420	5,812	1,916	896	1,275
Costs applicable to sales per ounce ⁽⁵⁾	\$ 1,126	\$ 1,050	\$ 933	\$ 834	\$ 1,127	\$ 819

⁽¹⁾ Includes by-product credits of \$179, \$124, and \$109 in 2024, 2023, and 2022, respectively.

⁽²⁾ Includes by-product credits of \$61, \$13, and \$8 in 2024, 2023, and 2022, respectively.

⁽³⁾ Excludes *Depreciation and amortization* and *Reclamation and remediation*.

⁽⁴⁾ Gold equivalent ounces is calculated as pounds or ounces produced multiplied by the ratio of the other metals price to the gold price, using Gold (\$1,400/oz.), Copper (\$3.50/lb.), Silver (\$20.00/oz.), Lead (\$1.00/lb.) and Zinc (\$1.20/lb.) pricing for 2024 and 2023, and Gold (\$1,200/oz.), Copper (\$3.25/lb.), Silver (\$23.00/oz.), Lead (\$0.95/lb.) and Zinc (\$1.15/lb.) pricing for 2022.

⁽⁵⁾ Per ounce measures may not recalculate due to rounding.

All-In Sustaining Costs

Current GAAP measures used in the mining industry, such as cost of goods sold, do not capture all of the expenditures incurred to discover, develop and sustain production. Therefore, Newmont calculates All-in sustaining costs ("AISC") based on the definition published by the World Gold Council. The World Gold Council is a market development organization for the gold industry comprised of and funded by gold mining companies around the world and is a regulatory organization.

AISC is a metric that expands on GAAP measures, such as cost of goods sold, and non-GAAP measures, such as costs applicable to sales per ounce, to provide visibility into the economics of our mining operations related to expenditures, operating performance and the ability to generate cash flow from our continuing operations. We believe that AISC is a non-GAAP measure that provides additional information to management, investors and others that aids in the understanding of the economics of our operations and performance compared to other producers and provides investors visibility by better defining the total costs associated with production.

AISC amounts are intended to provide additional information only and do not have any standardized meaning prescribed by GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP. Other companies may calculate these measures differently as a result of differences in the underlying accounting principles, policies applied and in accounting frameworks such as in IFRS, or by reflecting the benefit from selling non-gold metals as a reduction to AISC. Differences may also arise related to definitional differences of sustaining versus development (i.e. non-sustaining) activities based upon each company's internal policies.

The following disclosure provides information regarding the adjustments made in determining the AISC measure:

Costs applicable to sales. Includes all direct and indirect costs related to current production incurred to execute the current mine plan. We exclude certain exceptional or unusual amounts from CAS, such as significant revisions to recovery amounts. CAS includes by-product credits from certain metals obtained during the process of extracting and processing the primary ore-body. CAS is accounted for on an accrual basis and excludes *Depreciation and amortization* and *Reclamation and remediation*, which is consistent with our presentation of CAS on the Consolidated Statements of Operations. In determining AISC, only the CAS associated with producing and selling an ounce of gold is included in the measure. Therefore, the amount of gold CAS included in AISC is derived from the CAS presented in the Company's Consolidated Statements of Operations less the amount of CAS attributable to the production of other metals. The other metals' CAS at those mine sites is disclosed in Note 4 to the Consolidated Financial Statements. The allocation of CAS between gold and other metals is based upon the relative sales value of gold and other metals produced during the period.

Reclamation costs. Includes accretion expense related to reclamation liabilities and the amortization of the related ARC for the Company's operating properties. Accretion related to the reclamation liabilities and the amortization of the ARC assets for reclamation does not reflect annual cash outflows but are calculated in accordance with GAAP. The accretion and amortization reflect the periodic costs of reclamation associated with current production and are therefore included in the measure. The allocation of these costs to gold and other metals is determined using the same allocation used in the allocation of CAS between gold and other metals.

Advanced projects, research and development and exploration. Includes incurred expenses related to projects that are designed to sustain current production and exploration. We note that as current resources are depleted, exploration and advanced projects are necessary for us to replace the depleting reserves or enhance the recovery and processing of the current reserves to sustain production at existing operations. As these costs relate to sustaining our production, and are considered a continuing cost of a mining company, these costs are included in the AISC measure. These costs are derived from the *Advanced projects, research and development* and *Exploration* amounts presented in the Consolidated Statements of Operations less incurred expenses related to the development of new operations, or related to major projects at existing operations where these projects will materially benefit the operation in the future. The allocation of these costs to gold and other metals is determined using the same allocation used in the allocation of CAS between gold and other metals. We also allocate these costs incurred at Corporate and Other using the proportion of CAS between gold and other metals.

General and administrative. Includes costs related to administrative tasks not directly related to current production, but rather related to supporting our corporate structure and fulfilling our obligations to operate as a public company. Including these expenses in the AISC metric provides visibility of the impact that general and administrative activities have on current operations and profitability on a per ounce basis. We allocate these costs to gold and other metals at Corporate and Other using the proportion of CAS between gold and other metals.

Other expense, net. Excludes certain exceptional or unusual expenses, such as restructuring, as these are not indicative to sustaining our current operations. Furthermore, this adjustment to *Other expense, net* is also consistent with the nature of the adjustments made to *Net income (loss) attributable to Newmont stockholders* as disclosed in the Company's non-GAAP financial measure Adjusted net income (loss). The allocation of these costs to gold and other metals is determined using the same allocation used in the allocation of CAS between gold and other metals.

Treatment and refining costs. Includes costs paid to smelters for treatment and refining of our concentrates to produce the salable metal. These costs are presented net as a reduction of *Sales* on the Consolidated Statements of Operations. The allocation of these costs to gold and other metals is determined using the same allocation used in the allocation of CAS between gold and other metals.

Sustaining capital and finance lease payments. We determined sustaining capital and finance lease payments as those capital expenditures and finance lease payments that are necessary to maintain current production and execute the current mine plan. We determined development (i.e. non-sustaining) capital expenditures and finance lease payments to be those payments used to develop new operations or related to projects at existing operations where those projects will materially benefit the operation and are excluded from the calculation of AISC. The classification of sustaining and development capital projects and finance leases is based on a systematic review of our project portfolio in light of the nature of each project. Sustaining capital and finance lease payments are relevant to the AISC metric as these are needed to maintain the Company's current operations and provide improved transparency related to our ability to finance these expenditures from current operations. The allocation of these costs to gold and other metals is determined using the same allocation used in the allocation of CAS between gold and other metals. We also allocate these costs incurred at Corporate and Other using the proportion of CAS between gold and other metals.

- (6) Other expense, net includes incremental COVID-19 costs incurred as a result of actions taken to protect against the impacts of the COVID-19 pandemic at our operational segments of \$1 at Musselwhite, \$3 at Éléonore, \$7 at Peñasquito, \$3 at Merian, \$7 at Cerro Negro, \$6 at Yanacocha, \$2 at Boddington, \$6 at Tanami, totaling \$35, included in *Other expense, net*.
- (7) Other expense, net is adjusted for settlement costs of \$22, restructuring and severance costs of \$4 and distributions from the Newmont Global Community Support Fund of \$3, included in *Other expense, net*.
- (8) Includes sustaining capital expenditures of \$1,059. Refer to Liquidity and Capital Resources within Part II, Item 7, MD&A for sustaining capital by segment.

- (9) Excludes development capital expenditures, capitalized interest and the change in accrued capital totaling \$1,072. Refer to Liquidity and Capital Resources within Part II, Item 7, Management's Discussion and Analysis for the discussion of major development projects.
- (10) Includes finance lease payments for sustaining projects of \$64 and excludes finance lease payments for development projects of \$36.
- (11) Per ounce measures may not recalculate due to rounding.
- (12) *Costs applicable to sales* includes \$70 related to the Peñasquito Profit-Sharing Agreement associated with 2021 site performance. For further information, refer to Note 4 to the Consolidated Financial Statements.
- (13) Corporate and Other is a non-operating segment and includes the Company's business activities relating to its corporate and regional offices and all equity method investments. Refer to Note 4 to the Consolidated Financial Statements for further information.
- (14) Gold equivalent ounces is calculated as pounds or ounces produced multiplied by the ratio of the other metals price to the gold price, using Gold (\$1,200/oz.), Copper (\$3.25/lb.), Silver (\$23.00/oz.), Lead (\$0.95/lb.) and Zinc (\$1.15/lb.) pricing for 2022.
- (15) For the year ended December 31, 2022, Peñasquito sold 30 million ounces of silver, 67 thousand tonnes of lead and 169 thousand tonnes of zinc, and Boddington sold 39 thousand tonnes of copper.

Accounting Developments

For a discussion of Recently Adopted and Recently Issued Accounting Pronouncements, refer to Note 2 to the Consolidated Financial Statements.

Critical Accounting Estimates

Our discussion of financial condition and results of operations is based upon the information reported in our Consolidated Financial Statements. The preparation of these Consolidated Financial Statements in conformity with GAAP requires us to make assumptions and estimates that affect the reported amounts of assets, liabilities, revenues, and expenses, as well as the disclosure of contingent assets and liabilities as of the date of our financial statements. We have identified the accounting estimates listed below as critical to understanding and evaluating the financial results reported in our Consolidated Financial Statements. These accounting estimates require the application of significant management judgment and are critical due to the significant level of estimation uncertainty regarding the assumptions involved and the magnitude of the asset, liability, revenue or expense being reported. We base our assumptions and estimates on historical experience and various other sources that we believe to be reasonable under the circumstances. We review the underlying factors used in our estimates regularly, including reviewing the significant accounting policies impacting the estimates, to ensure compliance with GAAP. However, due to the uncertainty inherent in our estimates, actual results may materially differ from the estimates we calculate due to changes in circumstances, global economics and politics, and general business conditions. A summary of our significant accounting policies is detailed in Note 2 to the Consolidated Financial Statements.

Business Combinations

We recognize and measure the assets acquired and liabilities assumed in a business combination based on their estimated fair values at the acquisition date, while transaction and integration costs related to business combinations are expensed as incurred. Any excess of the purchase consideration when compared to the fair value of the net tangible and intangible assets acquired, if any, is recorded as goodwill. For material acquisitions, we engage independent appraisers to assist with the determination of the fair value of assets acquired, liabilities assumed, noncontrolling interest, if any, and goodwill, based on recognized business valuation methodologies. An income, market or cost valuation method may be utilized to estimate the fair value of the assets acquired, liabilities assumed, and noncontrolling interest, if any, in a business combination. The income valuation method represents the present value of future cash flows over the life of the asset using: (i) discrete financial forecasts, which rely on management's estimates of reserves, resources and exploration potential quantities, costs to produce and develop reserves, revenues, and operating expenses; (ii) short-term and long-term metal price assumptions, (iii) long-term growth rates; (iv) appropriate discount rates; and (v) expected future capital requirements ("income valuation method"). The market valuation method uses prices paid for a similar asset by other purchasers in the market, normalized for any differences between the assets ("market valuation method"). The cost valuation method is based on the replacement cost of a comparable asset at the time of the acquisition adjusted for depreciation and economic and functional obsolescence of the asset ("cost valuation method"). If the initial accounting for the business combination is incomplete by the end of the reporting period in which the acquisition occurs, an estimate is recorded. Subsequent to the acquisition date, and not later than one year from the acquisition date, we record any material adjustments to the initial estimate based on new information obtained that would have existed as of the date of the acquisition. Any adjustment that arises from information obtained that did not exist as of the date of the acquisition is recorded in the period the adjustments arises.

Carrying value of long-lived assets

We review and evaluate our long-lived assets for impairment when events or changes in circumstances indicate that the related carrying amounts may not be recoverable. Significant negative industry or economic trends, adverse social or political developments, declines in our market capitalization, geotechnical difficulties, reduced estimates of future cash flows from our reporting segments or other disruptions to our business are a few examples of events that we monitor, as they could indicate that the carrying value of the Company's long-lived assets, including development projects, may not be recoverable. In such cases, a recoverability test may be necessary to determine if an impairment charge is required.

For development projects, including our Conga project which is discussed further below, we review and evaluate changes to project plans and timing to determine continued technical, economic and social viability of the projects. If the Company determines to

sell or abandon a project due to uncertainty from changes in circumstances related to technical, economic, social, political or community factors, or other evolving circumstances indicate that the carrying value may not be recoverable, then a recoverability test is performed to determine if an impairment charge should be recorded.

An impairment loss is measured and recorded based on the estimated fair value of the long-lived assets being tested for impairment and their carrying amounts. Fair value is typically determined through the use of an income approach utilizing estimates of discounted pre-tax future cash flows or a market approach utilizing recent transaction activity for comparable properties. These approaches are primarily considered Level 3 fair value measurements. Occasionally, such as when an asset is held for sale, market prices are used. We believe our estimates and models used to determine fair value are similar to what a market participant would use.

The estimated undiscounted cash flows used to assess recoverability of long-lived assets and to measure the fair value of our mining operations are derived from current business plans, which are developed using short-term price forecasts reflective of the current price environment and our projections for long-term average metal prices. In addition to short- and long-term metal price assumptions, other assumptions include estimates of commodity-based and other input costs; proven and probable mineral reserves estimates, including the timing and cost to develop and produce the reserves; value beyond proven and probable mineral reserve estimates; estimated future closure costs; the use of appropriate discount rates; and applicable U.S. dollar long-term exchange rates. Refer to Item 7A, Quantitative and Qualitative Disclosures About Market Risk.

The significant assumption in determining the future cash flows for each mine site at December 31, 2024 is a long-term gold price of \$1,900 per ounce. A decrease of \$100 per ounce in the long-term gold price assumption could result in an impairment of our long-lived assets, including goodwill, of up to approximately \$1,039 before consideration of other value beyond proven and probable reserves which may significantly decrease the amount of any potential impairment charge.

As discussed above under Depreciation and amortization, various factors could impact our ability to achieve our forecasted production schedules from proven and probable reserves which could impact the carrying value of our long-lived assets. The ability to achieve the estimated quantities of recoverable minerals from exploration stage mineral interests involves further risks in addition to those factors applicable to mineral interests where proven and probable reserves have been identified, due to the lower level of confidence that the identified measured, indicated and inferred resources could ultimately be mined economically. Assets classified as exploration potential have the highest level of risk that the carrying value of the asset can be ultimately realized, due to the still lower level of geological confidence and economic modeling.

Events that could result in additional impairment of our long-lived assets include, but are not limited to, decreases in future metal prices, unfavorable changes in foreign exchange rates, increases in future closure costs, and any event that might otherwise have a material adverse effect on mine site cash flows.

Goodwill

Goodwill represents the excess of the purchase price over the estimated fair value of the net assets acquired in a business acquisition. Goodwill is allocated to reporting units and tested for impairment annually and when events or changes in circumstances indicate that the carrying value of a reporting unit exceeds its fair value. Each operating mine is considered a distinct reporting unit for purposes of goodwill impairment testing.

The Company may elect to perform a qualitative assessment when it is more likely than not that the fair value of a reporting unit is higher than its carrying value. At the Company's election or if it is determined to be more likely than not that the fair value is less than the carrying value, a quantitative goodwill impairment test is performed to determine the fair value of the reporting unit. The fair value of a reporting unit is determined using either the income approach utilizing estimates of discounted future cash flows or the market valuation approach utilizing recent transaction activity for comparable properties. These approaches are considered Level 3 fair value measurements. If the carrying amount of the reporting unit exceeds its fair value, an impairment loss is recognized in an amount equal to that excess, limited to the total amount of goodwill allocated to that reporting unit. Any impairment loss recognized in the current period is not reversed in future periods. The Company recognizes its pro rata share of goodwill and any subsequent goodwill impairment losses recorded by entities that are proportionately consolidated.

When the income approach is utilized to determine fair value, the estimated cash flows used to assess the fair value of a reporting unit are derived from the Company's current business plans, which are developed using short-term price forecasts reflective of the current price environment and management's projections for long-term average metal prices. The significant assumption in determining the future cash flows for each mine site at December 31, 2024 is a long-term gold price of \$1,900 per ounce. In addition to short- and long-term metal price assumptions, other assumptions include estimates of commodity-based and other input costs; proven and probable mineral reserves estimates, including the timing and cost to develop and produce the reserves; value beyond proven and probable estimates; estimated future closure costs; the use of appropriate discount rates; and applicable U.S. dollar long-term exchange rates. Refer to Item 7A, Quantitative and Qualitative Disclosures About Market Risk.

Fair value determinations require considerable judgment and are sensitive to changes in underlying assumptions and factors. For testing purposes of our reporting units, management's best estimates of the expected future results are the primary driver in determining the fair value. However, there can be no assurance that the estimates and assumptions made for purposes of the goodwill impairment tests will prove to be an accurate prediction of the future. Examples of events or circumstances that could reasonably be

expected to negatively affect the underlying key assumptions and ultimately impact the estimated fair value of our reporting units include, but are not limited to, such items as: (i) a decrease in forecasted production levels if we are unable to realize the mineable reserves, resources and exploration potential at our mining properties and extend the life of mine (ii) increased production or capital costs (iii) adverse changes in macroeconomic conditions including the market price of metals and changes in the equity and debt markets or country specific factors which could result in higher discount rates, (iv) significant unfavorable changes in tax rates including increased corporate income or mining tax rates, and (v) negative changes in regulation, legislation, and political environments which could impact our ability to operate in the future. Refer to Notes 7 and 19 to the Consolidated Financial Statements for further information regarding goodwill.

Carrying value of Conga

We review and evaluate the Company's Conga development project for recoverability whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. We have considered a variety of technical, economic, social and political developments related to the Conga project during our evaluation of impairment indicators since November 2011, when construction and development activities at the project were largely suspended. Project activities in recent years have focused on continued engagement with the local communities and maintaining and protecting existing project infrastructure and equipment through our active care and maintenance program. Although we have reclassified Conga reserves to resources and reallocated exploration and development capital to other projects, we continue to evaluate long-term options to progress development of the Conga project and improve social and political acceptance. While we have reprioritized the Yanacocha Sulfides project ahead of the Conga project, we have delayed the full-funds decision and are currently in the process of assessing project plan options for the Yanacocha Sulfides project. The Company also periodically updates the economic model for its Conga project to understand changes to the estimated capital costs, cash flows, and economic returns from the project. As of December 31, 2024, we have not identified events or changes in circumstances that indicate that the carrying value of the Conga project is not recoverable.

Reclamation and remediation obligations

The Company records the estimated asset retirement obligations associated with operating and non-operating mine sites when an obligation is incurred and the estimated costs can be reasonably measured. Fair value is measured as the present value of expected cash flow estimates, after considering inflation, our credit-adjusted risk-free rates and a market risk premium appropriate for our operations. Reclamation costs are allocated to expense over the life of the related assets and are periodically adjusted to reflect changes in the estimated present value resulting from the passage of time and revisions to the estimates of either the timing or amount of the reclamation costs. Reclamation obligations are based on our best estimate of when the expected spending for an existing environmental disturbance will occur. Our cost estimates are reflected on a third-party cost basis and comply with our legal obligation to retire long-lived assets in the period incurred. Changes in reclamation estimates at non-operating mines where the mine or portion of the mine site has entered the closure phase and has no substantive future economic value are reflected in earnings in the period an estimate is revised. Costs included in estimated asset retirement obligations are discounted to their present value and are estimated over a period of up to fifty years. We review, on at least an annual basis, the reclamation obligation at each mine.

Remediation costs are accrued when it is probable that an obligation has been incurred and the cost can be reasonably estimated. Such cost estimates may include ongoing care, maintenance and monitoring costs. Changes in remediation estimates at non-operating mines are reflected in earnings in the period an estimate is revised. Water treatment costs included in environmental remediation obligations are discounted to their present value and are estimated over a period of up to fifty years.

Accounting for reclamation and remediation obligations requires management to make estimates unique to each mining operation of the future costs the Company expects to incur to complete the reclamation and remediation work required to comply with existing laws and regulations. These estimates require considerable judgment and are sensitive to changes in underlying inputs and assumptions. Such changes, including, but not limited to, (i) changes to environmental laws and regulations, which could increase the scope and extent of work required, (ii) changes in the timing of reclamation and remediation activities, which could occur over an extended future period and (iii) changes in the methods and technology utilized to settle reclamation and remediation obligations, could have a material impact on our business, financial condition, results of operations and cash flows.

Refer to Note 6 to the Consolidated Financial Statements for further information regarding reclamation and remediation obligations.

Income and mining taxes

We account for income taxes using the liability method, recognizing certain temporary differences between the financial reporting basis of our liabilities and assets and the related income tax basis for such liabilities and assets. This method generates either a net deferred income tax liability or asset for us, as measured by the statutory tax rates in effect. We derive our deferred income tax charge or benefit by recording the change in either the net deferred income tax liability or asset balance for the year. The financial statement effects of changes in tax law are recorded as discrete items in the period enacted as part of income tax expense or benefit from continuing operations, regardless of the category of income or loss to which the deferred taxes relate. We have exposure to the impact of foreign exchange fluctuations on tax positions in certain jurisdictions, such movements are recorded within *Income and mining tax benefit (expense)* related to deferred income tax assets and liabilities, as well as non-current uncertain tax positions, while foreign exchange fluctuations impacting current tax positions are recorded within *Other income (loss), net* as foreign currency

exchange gains (losses). With respect to the earnings that we derive from the operations of our consolidated subsidiaries, in those situations where the earnings are indefinitely reinvested, no deferred taxes have been provided on the unremitted earnings (including the excess of the carrying value of the net equity of such entities for financial reporting purposes over the tax basis of such equity) of these consolidated companies.

Mining taxes represent state and provincial taxes levied on mining operations and are classified as income taxes as such taxes are based on a percentage of mining profits.

Our operations are in multiple jurisdictions where uncertainties arise in the application of complex tax regulations. Some of these tax regimes are defined by contractual agreements with the local government, while others are defined by general tax laws and regulations. We are subject to reviews of our income tax filings and other tax payments, and disputes can arise with the taxing authorities over the interpretation of its contracts or laws. We recognize potential liabilities and record tax liabilities for anticipated tax audit issues in the U.S. and other tax jurisdictions based on our estimate of whether it is more likely than not, and the extent to which, additional taxes will be due. We adjust these reserves in light of changing facts and circumstances; however, due to the complexity of some of these uncertainties, the ultimate resolution may result in a payment that is materially different from our current estimate of the tax liabilities. If our estimate of tax liabilities proves to be less than the ultimate assessment, an additional charge to expense would result. If the estimate of tax liabilities proves to be greater than the ultimate assessment, a tax benefit would result. We recognize interest and penalties, if any, related to unrecognized tax benefits in *Income and mining tax benefit (expense)*. In certain jurisdictions, we must pay a portion of the disputed amount to the local government in order to formally appeal the assessment. Such payment is recorded as a receivable if we believe the amount is ultimately collectible.

Valuation of deferred tax assets

Our deferred income tax assets include certain future tax benefits. We record a valuation allowance against any portion of those deferred income tax assets when we believe, based on the weight of available evidence, it is more likely than not that some portion or all of the deferred income tax asset will not be realized. We review the likelihood that we will realize the benefit of our deferred tax assets and therefore the need for valuation allowances on a quarterly basis, or more frequently if events indicate that a review is required. In determining the requirement for a valuation allowance, the historical and projected financial results of the legal entity or consolidated group recording the net deferred tax asset is considered, along with all other available positive and negative evidence.

Certain categories of evidence carry more weight in the analysis than others based upon the extent to which the evidence may be objectively verified. We look to the nature and severity of cumulative pretax losses (if any) in the current three-year period ending on the evaluation date or the expectation of future pretax losses and the existence and frequency of prior cumulative pretax losses.

We utilize a rolling twelve quarters of pre-tax income or loss as a measure of our cumulative results in recent years. Concluding that a valuation allowance is not required is difficult when there is significant negative evidence which is objective and verifiable, such as cumulative losses in recent years. However, a cumulative three year loss is not solely determinative of the need for a valuation allowance. We also consider all other available positive and negative evidence in our analysis.

Other factors considered in the determination of the probability of the realization of the deferred tax assets include, but are not limited to:

- Earnings history;
- Projected future financial and taxable income based upon existing reserves and long-term estimates of commodity prices;
- The duration of statutory carry forward periods;
- Prudent and feasible tax planning strategies readily available that may alter the timing of reversal of the temporary difference;
- Nature of temporary differences and predictability of reversal patterns of existing temporary differences; and
- The sensitivity of future forecasted results to commodity prices and other factors.

The Company assesses available positive and negative evidence to estimate if sufficient future taxable income will be generated to utilize the existing deferred tax assets. A significant piece of objective negative evidence is recent pretax losses and/or expectations of future pretax losses. Such objective evidence limits the ability to consider other subjective evidence including projections for future growth. On the basis of this evaluation, a valuation allowance has been recorded in Peru and Argentina. The amount of the deferred tax asset considered realizable, however, could be adjusted if estimates of future taxable income during the carryforward period are increased or if objective negative evidence in the form of cumulative losses is no longer present and additional weight may be given to subjective evidence such as our projections for growth.

Refer to Note 10 to the Consolidated Financial Statements for additional detail on the valuation allowance.

For additional risk factors that could impact the Company's ability to realize the deferred tax assets, refer to Note 2 to the Consolidated Financial Statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

(dollars in millions, except per ounce and per pound amounts)

Metal Prices

Changes in the market price of gold significantly affect our profitability and cash flow. Gold prices can fluctuate widely due to numerous factors, such as demand; forward selling by producers; central bank sales, purchases and lending; investor sentiment; the strength of the USD; inflation, deflation, or other general price instability; and global mine production levels. Changes in the market price of copper, silver, lead, and zinc also affect our profitability and cash flow. These metals are traded on established international exchanges and prices generally reflect market supply and demand, but can also be influenced by speculative trading in the commodity or by currency exchange rates. The Company does not currently hold instruments that are designated to hedge against the potential impacts due to market price changes in metals. Consideration of these impacts are discussed below.

Decreases in the market price of metals can significantly affect the value of our product inventory, stockpiles and leach pads, and it may be necessary to record a write-down to the net realizable value, as well as significantly impact the carrying value of our long-lived assets and goodwill. For information concerning the sensitivity of our impairment analysis over long-lived assets and goodwill to changes in metal price, refer to Critical Accounting Estimates within Item 7, MD&A, and Notes 2, 7 and 19 to the Consolidated Financial Statements.

Net realizable value represents the estimated future sales price based on short-term and long-term metals prices, less estimated costs to complete production and bring the product to sale. The primary factors that influence the need to record write-downs of our stockpiles, leach pads and product inventory include short-term and long-term metals prices and costs for production inputs such as labor, fuel and energy, materials and supplies as well as realized ore grades and recovery rates. The significant assumptions in determining the stockpile, leach pad and product inventory adjustments for each mine site reporting unit at December 31, 2024 included production cost and capitalized expenditure assumptions unique to each operation, and the following short-term and long-term assumptions:

	Short-term	Long-term
Gold price (per ounce)	\$ 2,663	\$ 1,900
Copper price (per pound)	\$ 4.17	\$ 4.00
Silver price (per ounce)	\$ 31.38	\$ 25.00
Lead price (per pound)	\$ 0.91	\$ 0.90
Zinc price (per pound)	\$ 1.38	\$ 1.25
AUD to USD exchange rate	\$ 0.65	\$ 0.70
CAD to USD exchange rate	\$ 0.71	\$ 0.75
MXN to USD exchange rate	\$ 0.05	\$ 0.05

The net realizable value measurement involves the use of estimates and assumptions unique to each mining operation regarding current and future operating and capital costs, metal recoveries, production levels, commodity prices, proven and probable reserve quantities, engineering data and other factors. A high degree of judgment is involved in determining such assumptions and estimates and no assurance can be given that actual results will not differ significantly from those estimates and assumptions. For information concerning the sensitivity of our stockpiles and ore on leach pads to changes in metal price, refer to Critical Accounting Estimates within Item 7, MD&A.

Interest Rate Risk

We are subject to interest rate risk related to the fair value of our senior notes which is wholly comprised of fixed rates at December 31, 2024. For fixed rate debt, changes in interest rates generally affect the fair value of the debt instrument, but not our earnings or cash flows. The terms of our fixed rate debt obligations do not generally allow investors to demand payment of these obligations prior to maturity. Therefore, we do not have significant exposure to interest rate risk for our fixed rate debt; however, we do have exposure to fair value risk if we repurchase or exchange long-term debt prior to maturity which could be material. Refer to Note 13 to our Consolidated Financial Statements for further information pertaining to the fair value of our fixed rate debt.

Foreign Currency

We have significant operations and/or assets in the U.S., Canada, Mexico, Dominican Republic, Peru, Suriname, Argentina, Chile, Australia, Papua New Guinea, Ecuador, Fiji and Ghana. All of our operations sell their gold, copper, silver, lead, and zinc production based on USD metal prices. Foreign currency exchange rates can fluctuate widely due to numerous factors, such as supply and demand for foreign and U.S. currencies and U.S. and foreign country economic conditions. Fluctuations in the local currency exchange rates in relation to the U.S. dollar can increase or decrease profit margins, cash flow and *Costs applicable to sales* per ounce to the extent costs are paid in local currency at foreign operations.

We performed a sensitivity analysis to estimate the impact to *Costs applicable to sales* per ounce arising from a hypothetical 10% adverse movement to local currency exchange rates at December 31, 2024 in relation to the U.S. dollar at our foreign mining operations, with no mitigation assumed from our foreign currency cash flow hedges. The sensitivity analyses indicated that a hypothetical 10% adverse movement would result in an approximate \$71 increase to *Costs applicable to sales* per gold ounce at December 31, 2024.

Commodity Price Exposure

Our provisional concentrate sales contain an embedded derivative that is required to be separated from the host contract for accounting purposes. The host contract is the receivable from the sale of the respective metal concentrates at the prevailing indices' prices at the time of sale. The embedded derivative, which is not designated for hedge accounting, is marked to market through earnings each period prior to final settlement.

We perform an analysis on the provisional concentrate sales to determine the potential impact to *Net income (loss) attributable to Newmont stockholders* for each 10% change to the average price on the provisional concentrate sales subject to final pricing over the next several months. Refer below for our analysis as of December 31, 2024.

	Provisionally Priced Sales Subject to Final Pricing ⁽¹⁾	Average Provisional Price (per ounce/ pound)	Effect of 10% change in Average Price (millions)	Market Closing Settlement Price ⁽²⁾ (per ounce/pound)
Gold (ounces, in thousands)	265	\$ 2,635	\$ 46	\$ 2,609
Copper (pounds, in millions)	85	\$ 3.99	\$ 23	\$ 3.95
Silver (ounces, in millions)	6	\$ 28.99	\$ 12	\$ 28.91
Lead (pounds, in millions)	52	\$ 0.88	\$ 3	\$ 0.87
Zinc (pounds, in millions)	114	\$ 1.34	\$ 10	\$ 1.35

⁽¹⁾ Includes provisionally priced by-product sales subject to final pricing, which are recognized as a reduction to *Costs applicable to sales*.

⁽²⁾ The closing settlement price as of December 31, 2024 is determined utilizing the London Metal Exchange for copper, lead and zinc and the London Bullion Market Association for gold and silver.

Hedging

The Company's hedging instruments consisted of the Cadia Power Purchase Agreement ("Cadia PPA") and foreign currency cash flow hedges at December 31, 2024, which were transacted for risk management purposes. The Cadia PPA mitigates the variability in future cash flows related to a portion of power purchases at the Cadia mine and the foreign currency cash flow hedges were entered into to mitigate variability in the USD functional cash flows related to the AUD- and CAD-denominated operating expenditures and AUD-denominated capital expenditures. By using hedges, we are affected by market risk, credit risk, and market liquidity risk.

Market Risk

Market risk is the risk that the fair value of a derivative might be adversely affected by a change in commodity prices or currency exchange rates, and that this in turn affects our financial condition. We manage market risk by establishing and monitoring parameters that limit the types and degree of market risk that may be undertaken. We mitigate this potential risk to our financial condition by establishing trading agreements with counterparties under which we are not required to post any collateral or be subject to any margin calls on our derivatives. Our counterparties cannot require settlement solely because of an adverse change in the fair value of a derivative.

We have performed sensitivity analyses as of December 31, 2024 regarding the Cadia PPA and foreign currency cash flow hedges. For the Cadia PPA, we utilized a modeling technique that measures the change in the fair values arising from a hypothetical 10% adverse movement in the forward electricity rates relative to current rates, with all other variables held constant. For the foreign currency cash flow hedges, we utilized a modeling technique that measures the change in the fair values arising from a hypothetical 10% adverse movement in the AUD and CAD foreign currency exchange rates relative to the U.S. dollar, with all other variables held constant. The foreign currency exchange rates we used in performing the sensitivity analysis were based on AUD and CAD market rates in effect at December 31, 2024. The sensitivity analyses indicated that a hypothetical 10% adverse movement would result in an approximate decrease in the fair value of the Cadia PPA cash flow hedge and the foreign currency cash flow hedges of \$32 and \$195 at December 31, 2024, respectively.

Credit Risk

Credit risk is the risk that a third party might fail to fulfill its performance obligations under the terms of a financial instrument. We mitigate credit risk by entering into derivatives with high credit quality counterparties, limiting the amount of exposure to each counterparty and monitoring the financial condition of the counterparties.

Market Liquidity Risk

Market liquidity risk is the risk that a derivative cannot be eliminated quickly, by either liquidating it or by establishing an offsetting position. Under the terms of our trading agreements, counterparties cannot require us to immediately settle outstanding derivatives, except upon the occurrence of customary events of default such as covenant breaches, including financial covenants, insolvency or bankruptcy. We further mitigate market liquidity risk by spreading out the maturity of our derivatives over time.

Refer to Note 14 to the Consolidated Financial Statements for further information on our derivative instruments.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Stockholders and Board of Directors of Newmont Corporation

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of Newmont Corporation (the Company) as of December 31, 2024 and 2023, the related consolidated statements of operations, comprehensive income (loss), changes in equity and cash flows for each of the three years in the period ended December 31, 2024, the related notes and the financial statement schedule in Item 15(a)(2) (collectively referred to as the "consolidated financial statements"). In our opinion, based on our audits and the report of PricewaterhouseCoopers LLP, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company at December 31, 2024 and 2023, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2024, in conformity with U.S. generally accepted accounting principles.

We did not audit the financial statements of Nevada Gold Mines LLC, a 38.5% owned investment which is proportionately consolidated, whose financial statements reflect total assets constituting 13% and 13% of consolidated assets as of December 31, 2024 and 2023, respectively, and sales constituting 13% in 2024, 19% in 2023, and 18% 2022 of the related consolidated totals. Those statements were audited by PricewaterhouseCoopers LLP, whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for Nevada Gold Mines LLC, is based solely on the report of PricewaterhouseCoopers LLP.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Company's internal control over financial reporting as of December 31, 2024, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework, and our report dated February 20, 2025 expressed an unqualified opinion thereon, based on our audit and the report of PricewaterhouseCoopers LLP.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits and the report of PricewaterhouseCoopers LLP provide a reasonable basis for our opinion.

Critical Audit Matter

The critical audit matter communicated below is a matter arising from the current period audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective or complex judgments. The communication of the critical audit matter does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Reclamation liabilities

Description of the Matter As discussed in Notes 2, 6 and 25 of the consolidated financial statements, the Company's mining and exploration activities are subject to various domestic and international laws and regulations governing the protection of the environment. Reclamation obligations are recognized when incurred and recorded as liabilities at fair value. Reclamation liabilities are periodically adjusted to reflect changes in the estimated present value resulting from revisions to the estimates of either the timing or amount of the reclamation costs. As of December 31, 2024, the Company's consolidated reclamation liabilities totaled \$8.5 billion, including \$1.5 billion included in liabilities held for sale.

Auditing management's accounting for reclamation liabilities was challenging, as significant judgment is required by the Company to estimate required cash flows to meet obligations established by mining permits, local statutes and promissory estoppel at the end of mine life as well as estimation of uncertainty inherent in the cash flows. The significant judgment was primarily related to the inherent estimation uncertainty relating to the extent of future reclamation activities and related costs.

How We Addressed the Matter in Our Audit We obtained an understanding, evaluated the design, and tested the operating effectiveness of the controls over the Company's accounting for reclamation liabilities, including controls over management's review of estimated future costs and the reclamation liability calculation.

To test the reclamation liabilities, among other procedures, we evaluated the methodology, significant assumptions and the underlying data used by the Company in its estimate. To assess the estimates of reclamation activities and cash flows, we evaluated significant changes from the prior estimate, verified consistency between timing of reclamation activities and projected mine life, compared anticipated costs across the Company's mines, verified cost rates against third-party information or internal cost records and recalculated management's estimate. We also evaluated the significant assumptions included in the fair value calculation, specifically the market risk premium. We involved our reclamation specialists to interview members of the Company's engineering staff, assess the completeness of the mine reclamation estimates with respect to meeting mine closure and post closure requirements, and evaluate the reasonableness of the engineering estimates and assumptions.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Managers and Members of Nevada Gold Mines LLC

Opinions on the financial statements and internal control over financial reporting

We have audited the consolidated balance sheets of Nevada Gold Mines LLC and its subsidiaries (the Joint Venture) as of December 31, 2024 and 2023, and the related consolidated statements of operations and comprehensive income, of changes in members' equity and of cash flows for each of the three years in the period ended December 31, 2024, including the related notes (collectively referred to as the consolidated financial statements) (not presented herein). We also have audited the Joint Venture's internal control over financial reporting as of December 31, 2024, based on criteria established in *Internal Control – Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Joint Venture as of December 31, 2024 and 2023, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2024 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Joint Venture maintained, in all material respects, effective internal control over financial reporting as of December 31, 2024, based on criteria established in *Internal Control – Integrated Framework* (2013) issued by the COSO.

Basis for opinions

The Joint Venture's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the Management's Report on Internal Control over Financial Reporting (not presented herein). Our responsibility is to express opinions on the Joint Venture's consolidated financial statements and on the Joint Venture's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Joint Venture in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements.

Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and limitations of internal control over financial reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical audit matters

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the Board of Managers (acting in a role equivalent to the audit committee)

and that (i) relates to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Qualitative goodwill impairment assessment

As described in note 2 to the Joint Venture's consolidated financial statements, the Joint Venture's goodwill balance was \$668 million (at a 100 percent economic interest) as of December 31, 2024. Goodwill is allocated to reporting units and assessed for impairment annually, in the fourth quarter of the fiscal year, and when events or changes in circumstances indicate that the carrying value of a reporting unit exceeds its fair value. The Joint Venture has four reporting units. The Joint Venture's management first assesses qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount (qualitative goodwill impairment assessment).

If it is determined that the fair value is more likely than not to be lower than the carrying value, a quantitative goodwill impairment test is performed. Management uses judgment in assessing the qualitative factors in the qualitative goodwill impairment assessment for each reporting unit, including significant adverse changes to future gold prices, future operating and capital costs, future production levels and mineral reserves and mineral resources. Management uses future production levels and mineral reserves and mineral resources based on information compiled by qualified persons (management's specialists).

The principal considerations for our determination that performing procedures relating to the qualitative goodwill impairment assessment is a critical audit matter are the judgment by management in assessing the qualitative factors in the qualitative goodwill impairment assessment for each reporting unit to determine whether further quantitative impairment testing is required, and a high degree of auditor judgment, subjectivity and effort in performing procedures and evaluating management's assessment of qualitative factors in the qualitative goodwill impairment assessment for each reporting unit with respect to significant adverse changes to future gold prices, future operating and capital costs, future production levels and mineral reserves and mineral resources.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's qualitative goodwill impairment assessment. These procedures also included, among others, evaluating the reasonableness of management's qualitative goodwill impairment assessment for each reporting unit with respect to significant adverse changes to future gold prices and future operating and capital costs by (i) comparing gold prices to external industry data; (ii) comparing operating and capital costs to recent actual operating and capital costs incurred; and (iii) considering consistency with evidence obtained in other areas of the audit. The work of management's specialists was used in performing the procedures to evaluate the reasonableness of future production levels and mineral reserves and mineral resources. As a basis for using this work, the management's specialists' qualifications were understood and the Joint Venture's relationship with management's specialists was assessed. The procedures performed also included evaluation of the methods and assumptions used by management's specialists, tests of the data used by management's specialists, and an evaluation of management's specialists' findings.

⁽¹⁾ Cash dividends paid per common share was \$1.00, \$1.60 and \$2.20 for 2024, 2023 and 2022, respectively. Dividends declared and dividends paid to common stockholders differ by \$3, \$3, and \$7 for 2024, 2023 and 2022, respectively, due to timing.

⁽²⁾ Sumitomo held a 5% interest in Yanacocha at December 31, 2021 and had the option to repurchase their interest for \$48 if certain conditions were not met. The Company purchased Sumitomo's 5% interest during 2022. Refer to Note 1 for further information.

The accompanying notes are an integral part of these Consolidated Financial Statements.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

NOTE 1 THE COMPANY

Newmont Corporation and its affiliates and subsidiaries (collectively, "Newmont," "we," "us" or the "Company") predominantly operate in the mining industry, focused on the production of and exploration for gold properties, some of which may contain copper, silver, zinc, lead or other metals. The Company has significant operations and/or assets in the United States ("U.S."), Canada, Mexico, Dominican Republic, Peru, Suriname, Argentina, Chile, Australia, Papua New Guinea, Ecuador, Fiji, and Ghana. The cash flow and profitability of the Company's operations are significantly affected by the market price of gold, copper, silver, lead, and zinc. The prices of gold, copper, silver, lead, and zinc are affected by numerous factors beyond the Company's control.

Divestiture of Non-core Assets

Based on a comprehensive review of the Company's portfolio of assets following the Newcrest acquisition, the Company's Board of Directors approved a portfolio optimization program to divest six non-core assets and a development project in February 2024. The non-core assets to be divested include Akyem, CC&V, Éléonore, Porcupine, Musselwhite, Telfer, and the Coffee development project in Canada. In February 2024, the Company concluded that these non-core assets and the development project, met the accounting requirements to be presented as held for sale in the first quarter of 2024, based on progress made through the Company's active sales program and management's expectation that the sale is probable and will be completed within 12 months.

The Company entered into definitive agreements in the second half of 2024 to sell the Telfer, Akyem, Musselwhite, Éléonore, and CC&V reportable segments, of which Telfer closed in 2024. Additionally, in January 2025 the Company entered into a definitive agreement to sell the Porcupine reportable segment. Refer to Note 3 for further information on divestitures.

Newcrest Transaction

On November 6, 2023, the Company completed its business combination transaction with Newcrest Mining Limited, a public Australian mining company limited by shares ("Newcrest"), whereby Newmont, through Newmont Overseas Holdings Pty Ltd, an Australian proprietary company limited by shares ("Newmont Sub"), acquired all of the ordinary shares of Newcrest in a fully stock transaction for total non-cash consideration of \$13,549. Newcrest became a direct wholly owned subsidiary of Newmont Sub and an indirect wholly owned subsidiary of Newmont (such acquisition, the "Newcrest transaction"). The combined company continues to be traded on the New York Stock Exchange under the ticker NEM. The combined company is also listed on the Toronto Stock Exchange under the ticker NGT, on the Australian Securities Exchange under the ticker NEM, and on the Papua New Guinea Securities Exchange under the ticker NEM. Refer to Note 3 for further information.

Noncontrolling Interests

Merian

Newmont has a 75% economic interest in Suriname Gold project C.V. ("Merian"), with the remaining interests held by Staatsolie Maatschappij Suriname N.V. ("Staatsolie"), a company wholly owned by the Republic of Suriname. Newmont consolidates Merian, through its wholly-owned subsidiary, Newmont Suriname LLC., in its Consolidated Financial Statements as the primary beneficiary of Merian, which is a variable interest entity. For the years ended December 31, 2024, 2023, and 2022, the Company recognized income of \$33, \$27, and \$59, respectively, within *Net loss (income) attributable to noncontrolling interests* related to Merian.

Yanacocha

At December 31, 2021, Newmont held a 51.35% ownership interest in Minera Yanacocha S.R.L ("Yanacocha") and consolidated Yanacocha in its Consolidated Financial Statements under the voting interest model. In 2022, the Company acquired the 5% ownership interest held in Yanacocha by Sumitomo Corporation ("Sumitomo") in exchange for cash consideration of \$48. Additionally in 2022, the Company acquired the remaining 43.65% interest in Yanacocha held by Compañía de Minas Buenaventura S.A.A. ("Buenaventura"), resulting in the Company holding 100% ownership interest in Yanacocha. The Company acquired Buenaventura's 43.65% noncontrolling interest in Yanacocha (the "Yanacocha Transaction") for \$300 cash consideration, certain royalties on any production from other future potential projects, and contingent payments of up to \$100 tied to higher metal prices, achieving commercial production at the Yanacocha Sulfides project and resolution on the outstanding Yanacocha tax dispute. The Yanacocha Transaction was accounted for as an equity transaction, resulting in a decrease to additional paid-in-capital and no gain or loss recognition.

Concurrent with the Yanacocha Transaction, the Company sold its 46.94% ownership interest in Minera La Zanja S.R.L. ("La Zanja"), accounted for as an equity method investment with a carrying value of \$— as of December 31, 2021. Per the terms of the sale, the Company sold its interest in La Zanja to Buenaventura, the parent company of La Zanja, in exchange for royalties on potential future production from the La Zanja operation and contributed cash of \$45 to be used exclusively for reclamation costs at the La Zanja operation. Upon close of the sale in 2022, the Company recognized a \$45 loss on sale of its equity interest, included in *Other income (loss), net*.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

For the year ended December 31, 2022, the Company recognized \$(1) of *Net loss (income) attributable to noncontrolling interests* related to Yanacocha. No *Net loss (income) attributable to noncontrolling interests* related to Yanacocha was recognized for the years ended December 31, 2024 and 2023, as the Company held 100% ownership interest in Yanacocha.

Discontinued Operations

Net income (loss) from discontinued operations included results related to the Batu Hijau and Elang contingent consideration assets obtained in connection with the sale of PT Newmont Nusa Tenggara in 2016. In the third quarter of 2024, the Company completed the sale of the Batu and Elang contingent consideration assets for cash consideration of \$153, resulting in a gain of \$15 included in *Net income (loss) from discontinued operations*.

For the years ended December 31, 2024, 2023, and 2022, the Company recorded income of \$68, \$27, and \$30, net of a tax benefit (expense) of \$31, \$(5) and \$(4), respectively, within *Net income (loss) from discontinued operations*. The Company received \$45, \$9 and \$22 for the years ended December 31, 2024, 2023 and 2022, respectively, related to discontinued operations. Refer to contingent consideration assets in Note 14 for additional information.

NOTE 2 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Risks and Uncertainties

As a global mining company, the Company's revenue, profitability, and future rate of growth are substantially dependent on prevailing metal prices, primarily for gold, but also for copper, silver, lead, and zinc. Historically, the commodity markets have been very volatile, and there can be no assurance that commodity prices will not be subject to wide fluctuations in the future. A substantial or extended decline in commodity prices could have a material adverse effect on the Company's financial position, results of operations, cash flows, access to capital and on the quantities of reserves that the Company can economically produce. The carrying value of the Company's *Property, plant and mine development, net; Inventories; Stockpiles and ore on leach pads; Investments; certain Derivative assets; Deferred income tax assets; and Goodwill* are particularly sensitive to the outlook for commodity prices. A decline in the Company's price outlook from current levels could result in material impairment charges related to these assets.

The Company's global operations expose it to risks associated with public health crises, geopolitical and macroeconomic pressures, including but not limited to inflationary conditions, as well as the effects of certain countermeasures taken by central banks, supply chain disruptions resulting from global conflicts and other global events, and an uncertain and evolving labor market.

The following factors could have further potential short- and, possibly, long-term material adverse impacts on the Company including, but not limited to, volatility in commodity prices and the prices for gold and other metals, changes in the equity and debt markets or country specific factors adversely impacting discount rates, significant cost inflation impacts on production, capital and asset retirement costs, logistical challenges, workforce interruptions and financial market disruptions, energy market disruptions, as well as potential impacts to estimated costs and timing of projects. Refer to Note 7 for further information on certain impairment charges incurred as a result of these challenging conditions.

As further response to the current market conditions, high inflation rates, the rising prices for commodities and raw materials, prolonged supply chain disruptions, competitive labor markets, and consideration of capital allocation, the Company has chosen to continue deferring the investment decision for the Yanacocha Sulfides project. While the Company has extended the timeline of the full-funds decision, assessment of the project remains a priority in Peru as the Company continued to advance engineering and long-term procurement activities. The delay of the Yanacocha Sulfides project is intended to focus funds on current operations and other capital commitments while management assesses execution and project options, up to and including transitioning Yanacocha operations into full closure. To the extent that assessment determines that the project is no longer sufficiently profitable or economically feasible under the Company's internal requirements, it would result in negative modifications to the Company's proven and probable reserves. Additionally, should the Company ultimately decide to forgo the development of Yanacocha Sulfides, the current carrying value of the assets under construction and other long-lived assets of the Yanacocha operations could become impaired and the timing of certain closure activities would be accelerated. As of December 31, 2024, the Yanacocha operations have total long-lived assets of approximately \$1,195, inclusive of approximately \$827 of assets under construction related to Yanacocha Sulfides.

Furthermore, the Company continues to hold the Conga project in Peru, which the Company does not currently anticipate developing in the next ten years as the Company continues to assess Yanacocha Sulfides; accordingly, the Conga project remains in care and maintenance. Should the Company be unable to develop the Conga project or conclude that future development is not in the best interest of the business, the Company may consider other alternatives for the project, which may result in a future impairment charge for the remaining assets. The total assets at Conga were \$892 and \$895 at December 31, 2024 and 2023.

The Company's global operations also expose it to foreign currency exchange rates which can increase or decrease profits to the extent costs are paid in foreign currencies, including the Australian dollar, the Mexican peso, the Canadian dollar, the Argentine peso, the Peruvian sol, the Surinamese dollar, the Ghanaian cedi, and the Papua New Guinean kina. Certain mines are located in hyperinflationary economies, which included the Ahafo, Akyem, Cerro Negro, and Merian mines at December 31, 2024. The majority of the activity at these mines has historically been denominated in USD; as a result, the devaluation of the related currency has resulted in

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

an immaterial impact on the Company's financial statements. Therefore, future devaluation of these currencies is not expected to have a material impact on the Company's financial statements.

The Cerro Negro mine, located in Argentina, is a USD functional currency entity. Argentina's central bank has enacted a number of foreign currency controls in an effort to stabilize the local currency, including requiring the Company to convert USD proceeds from metal sales to local currency and restricting payments to foreign-related entities denominated in foreign currency, such as dividends or distributions to the parent and related companies. The Company continues to monitor the foreign currency exposure risk and the limitations of repatriating cash to the United States. Currently, these currency controls are not expected to impact the Company's ability to repay its debt obligations or declare dividends.

Use of Estimates

The Company's Consolidated Financial Statements have been prepared in accordance with GAAP. The preparation of the Company's Consolidated Financial Statements requires the Company to make estimates and assumptions that affect the reported amounts of assets and liabilities and the related disclosure of contingent assets and liabilities at the date of the Consolidated Financial Statements and the reported amounts of revenues and expenses during the reporting period. The Company must make these estimates and assumptions because certain information used is dependent on future events, cannot be calculated with a high degree of precision from data available or simply cannot be readily calculated based on generally accepted methodologies. Actual results could differ from these estimates.

The more significant areas requiring the use of management estimates and assumptions relate to mineral reserves that are the basis for future cash flow estimates utilized in impairment calculations and units-of-production amortization calculations; environmental remediation, reclamation and closure obligations; estimates of recoverable gold and other minerals in stockpile and leach pad inventories; estimates of fair value for certain reporting units and asset impairments (including impairments of long-lived assets, goodwill and investments); write-downs of inventory, stockpiles and ore on leach pads to net realizable value; post-employment, post-retirement and other employee benefit liabilities; valuation allowances for deferred tax assets; provisional amounts related to income tax effects of newly enacted tax laws; provisional amounts related to uncertain tax positions; valuation of assets acquired and liabilities assumed in a business combination; valuation of assets held for sale; reserves for contingencies and litigation; and the fair value and accounting treatment of financial instruments including marketable and other equity securities and derivative instruments. The Company bases its estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances. Accordingly, actual results will differ from those amounts estimated in these financial statements.

Principles of Consolidation

The Consolidated Financial Statements include the accounts of Newmont Corporation, more-than-50%-owned subsidiaries that it controls and variable interest entities where it is the primary beneficiary. The proportionate consolidation method is used for investments in which the Company has an undivided interest in the assets, liabilities and operations and for certain unincorporated joint ventures in the extractive industry. All significant intercompany balances and transactions have been eliminated. Equity method accounting is applied for certain entities where the Company does not have control, but does have significant influence over the activities that most significantly impact the entities' operations and financial performance. The functional currency for the majority of the Company's operations is the U.S. dollar.

The Company follows the ASC guidance for identification and reporting of entities over which control is achieved through means other than voting rights. The guidance defines such entities as Variable Interest Entities.

Business Combination and Asset Acquisition Accounting

The Company applies a screen test to evaluate if substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets to determine whether a transaction should be accounted for as an asset acquisition or business combination.

When an acquisition does not meet the definition of a business combination because either: (i) substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset, or group of similar identified assets, or (ii) the acquired entity does not have an input and a substantive process that together significantly contribute to the ability to create outputs, the Company accounts for the acquisition as an asset acquisition. In an asset acquisition, goodwill is not recognized, but rather, any excess purchase consideration over the fair value of the net assets acquired is allocated on a relative fair value basis to the identifiable net assets as of the acquisition date and any direct acquisition-related transaction costs are capitalized as part of the purchase consideration.

When an acquisition is accounted for as a business combination, the Company recognizes and measures the assets acquired and liabilities assumed based on their estimated fair values at the acquisition date, while transaction and integration costs related to business combinations are expensed as incurred. Any excess of the purchase consideration in excess of the aggregate fair value of the net tangible and intangible assets acquired, if any, is recorded as goodwill. For material acquisitions, the Company engages independent appraisers to assist with the determination of the fair value of assets acquired, liabilities assumed, noncontrolling interest, if any, and goodwill, based on recognized business valuation methodologies. An income, market or cost valuation method may be

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

utilized to estimate the fair value of the assets acquired, liabilities assumed, and noncontrolling interest, if any, in a business combination. The income valuation method represents the present value of future cash flows over the life of the asset using discrete financial forecasts, long-term growth rates, appropriate discount rates, and expected future capital requirements. The market valuation method uses prices paid for a similar asset by other purchasers in the market, normalized for any differences between the assets. The cost valuation method is based on the replacement cost of a comparable asset at the time of the acquisition adjusted for depreciation and economic and functional obsolescence of the asset. During the measurement period, not to exceed one year from the date of acquisition, the Company may record adjustments to the assets acquired and liabilities assumed, with a corresponding offset to goodwill if new information is obtained related to facts and circumstances that existed as of the acquisition date. After the measurement period, any subsequent adjustments are reflected in the period the adjustment arises.

Assets Held for Sale

We classify long-lived assets, or disposal groups comprising of assets and liabilities, as held for sale in the period in which the following six criteria are met, (i) management, having the authority to approve the action, commits to a plan to sell the property; (ii) the property is available for immediate sale in its present condition, subject only to terms that are usual and customary; (iii) an active program to locate a buyer and other actions required to complete the plan to sell have been initiated; (iv) the sale of the property is probable and is expected to be completed within one year; (v) the property is being actively marketed for sale at a price that is reasonable in relation to its current fair value; and (vi) actions necessary to complete the plan of sale indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn.

The Company ceases depreciation and amortization on long-lived assets (or disposal groups) classified as held for sale, and measures them at the lower of carrying value or estimated fair value less cost to sell.

In determining the fair value of the assets less costs to sell, the Company considers factors including current sales prices for comparable assets, discounted cash flow projections, third party valuations and indicative offer information, if applicable. The Company's assumptions about fair value require significant judgment because the current market is sensitive to changes in economic conditions, as well as asset-specific considerations. The Company estimates the fair value of assets held for sale based on current market conditions and assumptions made by management, which may differ from actual results and could result in future impairments if market conditions deteriorate.

An impairment loss on the initial classification and subsequent measurement of an asset held for sale is recognized as an expense. Any subsequent increase in fair value less costs to sell (not exceeding the accumulated impairment loss that has been previously recognized) is recognized as a reversal of expense. The Company continues to evaluate the fair value of assets held for sale and monitors market conditions and other economic factors, which could result in additional impairments in the future.

Cash, Cash Equivalents and Restricted Cash

Cash and cash equivalents consist of all cash balances and highly liquid investments with an original maturity of three months or less. Because of the short maturity of these investments, the carrying amounts approximate their fair value. Cash and cash equivalents are held in overnight bank deposits or are invested in United States Treasury securities and money market securities. Restricted cash is excluded from cash and cash equivalents and is included in other current or non-current assets. Restricted cash is held primarily for the purpose of settling asset retirement obligations.

Stockpiles, Ore on Leach Pads and Inventories

As described below, costs that are incurred in or benefit the productive process are accumulated as stockpiles, ore on leach pads and inventories. Stockpiles, ore on leach pads and inventories are carried at the lower of average cost or net realizable value. Net realizable value represents the estimated future sales price of the product based on current and long-term metals prices, less the estimated costs to complete production and bring the product to sale. Write-downs of stockpiles, ore on leach pads and inventories to net realizable value are reported as a component of *Costs applicable to sales and Depreciation and amortization*. The current portion of stockpiles, ore on leach pads and inventories is determined based on the expected amounts to be processed within the next 12 months and utilize the short-term metal price assumption in estimating net realizable value. Stockpiles, ore on leach pads and inventories not expected to be processed within the next 12 months are classified as non-current and utilize the long-term metal price assumption in estimating net realizable value. The major classifications are as follows:

Stockpiles

Stockpiles represent ore that has been extracted from the mine and is available for further processing. Mine sequencing may result in mining material at a faster rate than can be processed. The Company generally processes the highest ore grade material first to maximize metal production; however, a blend of metal stockpiles may be processed to balance hardness and/or metallurgy in order to maximize throughput and recovery. Processing of lower grade stockpiled ore may continue after mining operations are completed. Sulfide copper ores are subject to oxidation over time which can reduce expected future recoveries. Stockpiles are measured by estimating the number of tons added and removed from the stockpile, the number of contained ounces or pounds (based on assay data) and the estimated metallurgical recovery rates (based on the expected processing method). Stockpile ore tonnages are verified by periodic surveys. Costs are added to stockpiles based on current mining costs incurred including applicable overhead and

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

depreciation and amortization relating to mining operations and removed at each stockpile's average cost per recoverable unit as material is processed. Carrying values are evaluated at least quarterly, in accordance with the above.

Ore on Leach Pads

Ore on leach pads represent ore that has been mined and placed on leach pads where a solution is applied to the surface of the heap to dissolve the gold or silver or extract the copper. Costs are added to ore on leach pads based on current mining costs, including applicable depreciation and amortization relating to mining operations. Costs are removed from ore on leach pads as ounces or pounds are recovered based on the average cost per estimated recoverable ounce of gold or silver or pound of copper on the leach pad. Estimates of recoverable ore on the leach pads are calculated from the quantities of ore placed on the leach pads (measured tons added to the leach pads), the grade of ore placed on the leach pads (based on assay data) and a recovery percentage (based on ore type). In general, leach pads recover between 50% and 95% of the recoverable ounces in the first year of leaching, declining each year thereafter until the leaching process is complete.

Although the quantities of recoverable metal placed on the leach pads are reconciled by comparing the grades of ore placed on pads to the quantities of metal actually recovered (metallurgical balancing), the nature of the leaching process inherently limits the ability to precisely monitor inventory levels. As a result, the metallurgical balancing process is constantly monitored and estimates are refined based on actual results over time. Historically, the Company's operating results have not been materially impacted by variations between the estimated and actual recoverable quantities of metal on its leach pads. Variations between actual and estimated quantities resulting from changes in assumptions and estimates that do not result in write-downs to net realizable value are accounted for on a prospective basis.

In-process Inventory

In-process inventories represent material that is currently in the process of being converted to a saleable product. Conversion processes vary depending on the nature of the ore and the specific processing facility, but include mill in-circuit, flotation, leach and carbon-in-leach. In-process material is measured based on assays of the material fed into the process and the projected recoveries of the respective processing plants. In-process inventories are valued at the lower of the average cost of the material fed into the process attributable to the source material coming from the mines, stockpiles and/or leach pads, plus the in-process conversion costs, including applicable amortization relating to the process facilities incurred to that point in the process or net realizable value.

Precious Metals Inventory

Precious metals inventories include gold doré and/or gold bullion. Precious metals that result from the Company's mining and processing activities are valued at the lower of the average cost of the respective in-process inventories incurred prior to the refining process, plus applicable refining costs or net realizable value.

Concentrate Inventory

Concentrate inventories represent gold, silver, lead, zinc and copper concentrate available for shipment or in transit for further processing when the sales process has not been completed. The Company values concentrate inventory at average cost, including an allocable portion of support costs and amortization. Costs are added and removed to the concentrate inventory based on metal in the concentrate and are valued at the lower of average cost or net realizable value.

Materials and Supplies

Materials and supplies are valued at the lower of average cost or net realizable value. Cost includes applicable taxes and freight.

Property, Plant and Mine Development

Facilities and Equipment

Expenditures for new facilities or equipment and expenditures that extend the useful lives of existing facilities or equipment are capitalized and recorded at cost. Facilities and equipment acquired as a part of a finance lease, build-to-suit or other financing arrangement are capitalized and recorded based on the contractual lease terms. The facilities and equipment are depreciated using the straight-line method at rates sufficient to depreciate such capitalized costs over the estimated productive lives of such facilities. These estimated productive lives do not exceed the related estimated mine lives, which are based on proven and probable reserves.

Mine Development

Mine development costs include engineering and metallurgical studies, drilling and other related costs to delineate an ore body, the removal of overburden to initially expose an ore body at open pit surface mines and the building of access ways, shafts, lateral access, drifts, ramps and other infrastructure at underground mines. Costs incurred before mineralization is classified as proven and probable reserves are expensed and classified as *Exploration* or *Advanced projects, research and development* expense.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Capitalization of mine development project costs that meet the definition of an asset begins once mineralization is classified as proven and probable reserves.

Drilling and related costs are capitalized for an ore body where proven and probable reserves exist and the activities are directed at obtaining additional information on the ore body or converting measured, indicated and inferred resources to proven and probable reserves. All other drilling and related costs are expensed as incurred. Drilling costs incurred during the production phase for operational ore control are allocated to inventory costs and then included as a component of *Costs applicable to sales*.

The cost of removing overburden and waste materials to access the ore body at an open pit mine prior to the production phase are referred to as "pre-stripping costs." Pre-stripping costs are capitalized during the development of an open pit mine. Where multiple open pits exist at a mining complex utilizing common processing facilities, pre-stripping costs are capitalized at each pit. The removal, production, and sale of de minimis saleable materials may occur during the development phase of an open pit mine and are assigned incremental mining costs related to the removal of that material.

The production phase of an open pit mine commences when saleable minerals, beyond a de minimis amount, are produced. Stripping costs incurred during the production phase of a mine are variable production costs that are included as a component of inventory to be recognized in *Costs applicable to sales* in the same period as the revenue from the sale of inventory.

Mine development costs are amortized using the units-of-production method based on estimated recoverable ounces or pounds in proven and probable reserves. To the extent that these costs benefit an entire ore body, they are amortized over the estimated life of the ore body. Costs incurred to access specific ore blocks or areas that only provide benefit over the life of that area are amortized over the estimated life of that specific ore block or area.

Underground development costs incurred before mineralization is classified as proven and probable reserves are expensed and classified as *Exploration or Advanced projects, research and development* expense. Capitalization of mine development project costs that meet the definition of an asset begins once mineralization is classified as proven and probable reserves.

Mineral Interests

Mineral interests include acquired interests in production, development and exploration stage properties. Mineral interests are capitalized at their fair value at the acquisition date, either as an individual asset purchase or as part of a business combination. Mineral interests in the development and exploration stage are not amortized until the underlying property is converted to the production stage, at which point the mineral interests are amortized over the estimated recoverable proven and probable reserves.

The value of such assets is primarily driven by the nature and amount of mineral interests believed to be contained in such properties. Production stage mineral interests represent interests in operating properties that contain proven and probable reserves and are amortized using the units-of-production method based on the estimated recoverable ounces or pounds in proven and probable reserves. Development stage mineral interests represent interests in properties under development that contain proven and probable reserves. Exploration stage mineral interests represent interests in properties that are believed to potentially contain mineral resources consisting of (i) mineral resources within pits; mineral resources with insufficient drill spacing to qualify as proven and probable reserves; and mineral resources in close proximity to proven and probable reserves; (ii) around-mine exploration potential not immediately adjacent to existing reserves and mineralization, but located within the immediate mine area; (iii) other mine-related exploration potential that is not part of current resources and is comprised mainly of material outside of the immediate mine area; (iv) greenfield exploration potential that is not associated with any other production, development or exploration stage property, as described above; or (v) any acquired right to explore or extract a potential mineral deposit. The Company's mineral rights generally are enforceable regardless of whether proven and probable reserves have been established. In certain limited situations, the nature of a mineral right changes from an exploration right to a mining right upon the establishment of proven and probable reserves. The Company has the ability and intent to renew mineral interests where the existing term is not sufficient to recover all identified and valued proven and probable reserves and/or undeveloped mineral resources.

Goodwill

Goodwill represents the excess of the purchase price over the estimated fair value of the net assets acquired in a business acquisition. Goodwill is allocated to reporting units and tested for impairment annually as of December 31 and when events or changes in circumstances indicate that the carrying value of a reporting unit exceeds its fair value. Each operating mine is considered a distinct reporting unit for purposes of goodwill impairment testing.

The Company may elect to perform a qualitative assessment when it is more likely than not that the fair value of a reporting unit is higher than its carrying value. If the Company determines that it is more likely than not that the fair value is less than the carrying value, a quantitative goodwill impairment test is performed to determine the fair value of the reporting unit. The fair value of a reporting unit is determined using either the income approach utilizing estimates of discounted future cash flows or the market approach utilizing recent transaction activity for comparable properties. These approaches are considered Level 3 fair value measurements. If the carrying amount of the reporting unit exceeds its fair value, an impairment loss is recognized in an amount equal to that excess, limited to the total amount of goodwill allocated to that reporting unit. The Company recognizes its pro rata share of goodwill and any subsequent goodwill impairment losses recorded by entities that are proportionately consolidated.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The estimated cash flows used to assess the fair value of a reporting unit are derived from the Company's current business plans, which are developed using short-term price forecasts reflective of the current price environment and management's projections for long-term average metal prices. In addition to short- and long-term metal price assumptions, other assumptions include estimates of commodity-based and other input costs; capital investments; proven and probable mineral reserves estimates, including the timing and cost to develop and produce the reserves; value beyond proven and probable mineral reserve estimates; estimated future closure costs; the use of appropriate discount rates; and applicable U.S. dollar long-term exchange rates.

Impairment of Long-lived Assets

The Company reviews and evaluates its long-lived assets for impairment when events or changes in circumstances indicate that the related carrying amounts may not be recoverable. An impairment loss is measured and recorded based on the estimated fair value of the long-lived assets being tested for impairment, and their carrying amounts. Fair value is typically determined through the use of an income approach utilizing estimates of discounted pre-tax future cash flows or a market approach utilizing recent transaction activity for comparable properties. These approaches are considered Level 3 fair value measurements. Occasionally, such as when an asset is held for sale, market prices are used.

The estimated undiscounted cash flows used to assess recoverability of long-lived assets and to measure the fair value of the Company's mining operations are derived from current business plans, which are developed using short-term price forecasts reflective of the current price environment and management's projections for long-term average metal prices. In addition to short- and long-term metal price assumptions, other assumptions include estimates of commodity-based and other input costs; proven and probable mineral reserve estimates, including the timing and cost to develop and produce the reserves; value beyond proven and probable mineral reserve estimates; estimated future closure costs; and the use of appropriate discount rates.

In estimating undiscounted cash flows, assets are grouped at the lowest level for which there are identifiable cash flows that are largely independent of undiscounted cash flows from other asset groups. The Company's estimates of undiscounted cash flows are based on numerous assumptions and it is possible that actual cash flows may differ significantly from estimates, as actual produced reserves, metal prices, commodity-based and other costs, and closure costs are each subject to significant risks and uncertainties.

Investments

Time Deposits

Time deposits with an original maturity of more than three months but less than one year are included within *Investments*. These time deposits are carried at amortized cost. Accrued interest is recorded in *Other income (loss), net*.

Equity Method Investments

Management classifies investments at the acquisition date and re-evaluates the classification at each balance sheet date and when events or changes in circumstances indicate that there is a change in the Company's ability to exercise significant influence. The ability to exercise significant influence is typically presumed when the Company possesses 20% or more of the voting interests in the investee. The Company accounts for its investments in stock of other entities over which the Company has significant influence, but not control, using the equity method of accounting. Under the equity method of accounting, the Company increases its investment for contributions made and records its proportionate share of net earnings, declared dividends and partnership distributions based on the most recently available financial statements of the investee. To the extent that there is a basis difference between the amount invested and the underlying equity in the net assets of an equity investment, the Company allocates such differences between tangible and intangible assets. This basis difference is being amortized into *Equity income (loss) of affiliates* over the remaining estimated useful lives of the underlying tangible and intangible net assets. The Company from time to time will elect the fair value option to account for its equity method investments if the fair value option better reflects the economics of its investment. Equity method investments accounted for under the fair value option are remeasured periodically with any changes in fair value recorded in *Other income (loss), net*. Equity method investments are included in *Investments*.

Contributions made to equity method investees at times are in the form of loan agreements. Loans provided to equity method investees that are made based on the Company's proportionate ownership percentage are accounted for as "in-substance capital contributions" and are treated as an increase to the investment. Principal and interest payments received on loans treated as in-substance capital contributions are assessed under the cumulative earnings approach to determine if the distribution received represents a return on capital or a return of capital. Return on capital distributions are recorded as an operating cash flow whereas return of capital distributions are recorded as an investing cash flow. Loans provided to equity method investees that are not made on a proportionate basis are accounted for as a loan receivable and do not increase the investment. Principal payments received on loans not treated as an in-substance capital contribution are accounted for as a reduction to the loan receivable and interest received is recorded as interest income.

The Company evaluates its equity method investments for potential impairment whenever events or changes in circumstances indicate that there is an other-than-temporary decline in the value of the investment. Declines in fair value that are deemed to be other-than-temporary are charged to *Other income (loss), net*.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Marketable Equity, Debt, and Other Equity Securities

The Company has certain marketable equity and debt securities and other equity securities. Marketable equity securities are measured primarily at fair value with any changes in fair value recorded in *Other income (loss), net*. Certain other equity securities are accounted for under the measurement alternative (cost less impairment, adjusted for any qualifying observable price changes) when fair value is not readily determinable. The Company accounts for its restricted marketable debt securities as available-for-sale securities. Unrealized gains and losses on available-for-sale investments, net of taxes, are reported as a component of *Accumulated other comprehensive income (loss)* in *Total equity*, unless an impairment is deemed to be credit-related. Credit-related impairment is recognized as an allowance for credit losses on the balance sheet with a corresponding charge to *Other income (loss), net*.

Derivative Instruments

The Company holds derivatives for risk management purposes rather than for trading. The Company uses derivatives to mitigate uncertainty and volatility caused by underlying exposures to foreign exchange rates and energy prices. The fair values of all derivative instruments are recognized as assets or liabilities at the balance sheet date and are reported gross.

Financial instruments that meet the definition of a derivative, but are not designated for hedge accounting under ASC 815, are accounted for at fair value using derivative pricing models. Valuation models require a variety of inputs, including long term metal prices, life of mine production profiles, discount rates, and inflation assumptions. These instruments are subsequently remeasured to their fair value at each reporting date with the resulting gain or loss recognized in the Consolidated Statement of Operations.

Cash Flow Hedges

The fair value of derivative contracts qualifying as cash flow hedges are reflected as assets or liabilities in the Consolidated Balance Sheets. The changes in fair value of these hedges are deferred in *Accumulated other comprehensive income (loss)*. Amounts deferred in *Accumulated other comprehensive income (loss)* are reclassified to income when the hedged transaction has occurred in the same income statement line where the earnings effect of the hedged item is presented. Cash transactions related to the Company's derivative contracts accounted for as hedges are classified in the same category as the item being hedged in the Consolidated Statements of Cash Flows.

When derivative contracts qualifying as cash flow hedges are settled, accelerated or restructured before the maturity date of the contracts, the related amount in *Accumulated other comprehensive income (loss)* at the settlement date is deferred and reclassified to earnings, when the originally designated hedged transaction impacts earnings and is presented in the same income statement line item as the earnings effect of the hedged item, unless the underlying hedge transaction becomes probable of not occurring, at which time related amounts in *Accumulated other comprehensive income (loss)* are reclassified to earnings immediately.

Debt

The Company carries its Senior Notes at amortized cost.

Debt issuance costs and debt premiums and discounts, which are included in *Debt*, are amortized using the effective interest method over the terms of the respective Senior Notes as a component of *Interest expense, net of capitalized interest* within the Consolidated Statements of Operations.

Gain or loss on extinguishment of debt is recorded as a component of *Other income (loss), net* upon the extinguishment of a debt instrument and is calculated as the difference between the reacquisition price and net carrying amount of the debt, which includes unamortized debt issuance costs. The Company evaluates all changes to its debt arrangements to determine whether the changes represent a modification or extinguishment to the old debt arrangement. If a debt instrument is deemed to be modified, the Company capitalizes all new lender fees and expenses all third-party fees. If it is determined that an extinguishment of one of the Company's debt instruments has occurred, the unamortized financing fees associated with the extinguished instrument are expensed. For the revolving loans, all lender and third-party fees are capitalized, and in the event an amendment reduces the committed capacity under the revolving loans, the Company will expense a portion of any unamortized fees on a pro-rata basis in proportion to the decrease in the committed capacity.

Leases

The Company determines if a contractual arrangement represents or contains a lease at inception. Operating leases are included in *Other non-current assets* and *Other current and non-current liabilities* in the Consolidated Balance Sheets. Finance leases are included in *Property, plant and mine development, net* and current and non-current *Lease and other financing obligations* in the Consolidated Balance Sheets.

Operating and finance lease right-of-use ("ROU") assets and lease liabilities are recognized at the lease commencement date based on the present value of the future lease payments over the lease term. Leases acquired in a business combination are also measured based on the present value of the remaining leases payments, as if the acquired lease were a new lease at the acquisition date. When the rate implicit to the lease cannot be readily determined, the Company utilizes its incremental borrowing rate in

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

determining the present value of the future lease payments. The incremental borrowing rate is derived from information available at the lease commencement date and represents the rate of interest that the Company would have to pay to borrow on a collateralized basis over a similar term and amount equal to the lease payments in a similar economic environment. The ROU asset includes any lease payments made and lease incentives received prior to the commencement date. Operating lease ROU assets also include any cumulative prepaid or accrued rent when the lease payments are uneven throughout the lease term. The ROU assets and lease liabilities may include options to extend or terminate the lease when it is reasonably certain that the Company will exercise that option.

The Company has lease arrangements that include both lease and non-lease components. The Company accounts for each separate lease component and its associated non-lease components as a single lease component for the majority of its asset classes. Additionally, for certain lease arrangements that involve leases of similar assets, the Company applies a portfolio approach to effectively account for the underlying ROU assets and lease liabilities.

Common Stock

Newmont filed a shelf registration statement on Form S-3 under which it can issue an indeterminate number or amount of common stock, preferred stock, debt securities, guarantees of debt securities and warrants from time to time at indeterminate prices, subject to the limitations of the Delaware General Corporation Law, the Company's certification of incorporation and bylaws. It also includes the ability to resell an indeterminate amount of common stock, preferred stock and debt securities from time to time upon exercise of warrants or conversion of convertible securities.

Treasury Stock

The Company records repurchases of common shares as *Treasury stock* at cost and records any subsequent retirements of treasury shares at cost. When treasury shares are retired, the Company's policy is to allocate the excess of the repurchase price over the par value of shares acquired to both *Retained earnings* and *Additional paid-in capital* using settlement-date accounting. The portion allocated to *Additional paid-in capital* is calculated on a pro rata basis of the shares to be retired and the total shares issued and outstanding as of the date of the retirement.

During the years ended December 31, 2024, the Company repurchased and retired approximately 26 million shares of its common stock for \$1,246. No repurchases occurred during the years ended December 31, 2023 and 2022. During the years ended December 31, 2024, 2023 and 2022, the Company withheld 0.4 million, 0.6 million and 0.6 million shares, respectively, for payments of employee withholding taxes related to the vesting of stock awards.

Revenue Recognition

Newmont generates revenue by selling gold, copper, silver, lead, and zinc produced from its mining operations. Refer to Note 4 for further information regarding the Company's operating segments.

The majority of the Company's *Sales* come from the sale of refined gold; however, the end product at the Company's gold operations is generally doré bars. Doré is an alloy consisting primarily of gold but also containing silver and other metals. Doré is sent to refiners to produce bullion that meets the required market standard of 99.95% gold. Under the terms of the Company's refining agreements, the doré bars are refined for a fee, and the Company's share of the refined gold and the separately-recovered silver is credited to its bullion account. Gold from doré bars credited to its bullion account is typically sold to banks or refiners.

A portion of gold sold from certain sites is sold in the form of concentrate. The Company's *Sales* also come from the sale of copper, silver, lead, and zinc. Sales from these metals are generally in the form of concentrate, which is sold to smelters for further treatment and refining.

Generally, if a metal expected to be mined represents more than 10% to 20% of the life of mine sales value of all the metal expected to be mined, co-product accounting is applied. When the Company applies co-product accounting at an operation, revenue is recognized for each co-product metal sold, and shared costs applicable to sales are allocated based on the relative sales values of the co-product metals produced. Generally, if metal expected to be mined is less than the 10% to 20% of the life of mine sales value, by-product accounting is applied. Revenues from by-product sales, which are immaterial, are credited to *Costs applicable to sales* as a by-product credit. Silver, lead and zinc are produced as co-products at Peñasquito. Copper is produced as a co-product at Red Chris, Boddington, Cadia, and Telfer. Aside from the co-product sales at Red Chris, Peñasquito, Boddington, Cadia, and Telfer, copper and silver produced at other Newmont sites are by-product metals.

Gold Sales from Doré Production

The Company recognizes revenue for gold from doré production when it satisfies the performance obligation of transferring gold inventory to the customer, which generally occurs upon transfer of gold bullion credits as this is the point at which the customer obtains control the ability to direct the use and obtains substantially all of the remaining benefits of ownership of the asset.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The Company generally recognizes the sale of gold bullion credits when the credits are delivered to the customer. The transaction price is determined based on the agreed upon market price and the number of ounces delivered. Payment is due upon delivery of gold bullion credits to the customer's account.

Sales from Concentrate Production

The Company recognizes revenue for gold, copper, silver, lead, and zinc from concentrate production, net of treatment and refining charges, when it satisfies the performance obligation of transferring control of the concentrate to the customer. This generally occurs as material passes over the vessel's rail at the port of loading based on the date from the bill of lading, as the customer has the ability to direct the use of and obtain substantially all of the remaining benefits from the material and the customer has the risk of loss. Newmont has elected to account for shipping and handling costs for concentrate contracts as fulfillment activities and not as promised goods or services; therefore these activities are not considered separate performance obligations.

The Company generally sells metal concentrate based on the monthly average market price for a future month, dependent on the relevant contract, following the month in which the delivery to the customer takes place. The amount of revenue recognized for concentrates is initially recorded on a provisional basis based on the forward prices for the estimated month of settlement and the Company's estimated metal quantities based on assay data. The Company's sales based on a provisional price contain an embedded derivative that is required to be separated from the host contract for accounting purposes. The host contract is the receivable from the sale of the concentrates at the forward price at the time of sale. The embedded derivative, which is not designated for hedge accounting, is primarily marked to market through *Sales* each period prior to final settlement. The Company also adjusts estimated metal quantities used in computing provisional sales using new information and assay data from the smelter as it is received (if any).

A provisional payment is generally due upon delivery of the concentrate to the customer. Final payment is due upon final settlement of price and quantity with the customer.

The principal risks associated with recognition of sales on a provisional basis include metal price fluctuations and updated quantities between the date the sale is recorded and the date of final settlement. If a significant decline in metal prices occurs, or assay data results in a significant change in quantity between the provisional pricing date and the final settlement date, it is reasonably possible that the Company could be required to return a portion of the provisional payment received on the sale. Refer to Note 5 for additional information.

Income and Mining Taxes

The Company accounts for income taxes using the liability method, recognizing certain temporary differences between the financial reporting basis of the Company's liabilities and assets and the related income tax basis for such liabilities and assets. This method generates either a net deferred income tax liability or asset for the Company, as measured by the statutory tax rates in effect. The Company derives its deferred income tax charge or benefit by recording the change in either the net deferred income tax liability or asset balance for the year. The financial statement effects of changes in tax law are recorded as discrete items in the period enacted as part of income tax expense or benefit from continuing operations, regardless of the category of income or loss to which the deferred taxes relate. The Company determines if the assessment of a particular income tax effect is "complete." Those effects for which the accounting is determined to be complete are reported in the enactment period financial statements. The Company has exposure to the impact of foreign exchange fluctuations on tax positions in certain jurisdictions, such movements are recorded within *Income and mining tax benefit (expense)* related to deferred income tax assets and liabilities, as well as non-current uncertain tax positions, while foreign exchange fluctuations impacting current tax positions are recorded within *Other income (loss), net* as foreign currency exchange gains (losses). With respect to the earnings that the Company derives from the operations of its consolidated subsidiaries, in those situations where the earnings are indefinitely reinvested, no deferred taxes have been provided on the unremitted earnings (including the excess of the carrying value of the net equity of such entities for financial reporting purposes over the tax basis of such equity) of these consolidated companies.

Mining taxes represent state and provincial taxes levied on mining operations and are classified as income taxes. As such, taxes are based on a percentage of mining profits.

Newmont's operations are in multiple jurisdictions where uncertainties arise in the application of complex tax regulations. Some of these tax regimes are defined by contractual agreements with the local government, while others are defined by general tax laws and regulations. Newmont and its subsidiaries are subject to reviews of its income tax filings and other tax payments, and disputes can arise with the taxing authorities over the interpretation of its contracts or laws. The Company recognizes potential liabilities and records tax liabilities for anticipated tax audit issues in the U.S. and other tax jurisdictions based on its estimate of whether it is more likely than not, and the extent to which, additional taxes will be due. The Company adjusts these reserves in light of changing facts and circumstances; however, due to the complexity of some of these uncertainties, the ultimate resolution may result in a payment that is materially different from the Company's current estimate of the tax liabilities. If the Company's estimate of tax liabilities proves to be less than the ultimate assessment, an additional charge to expense would result. If the estimate of tax liabilities proves to be greater than the ultimate assessment, a tax benefit would result. The Company recognizes interest and penalties, if any, related to unrecognized tax benefits in *Income and mining tax benefit (expense)*. In certain jurisdictions, Newmont must pay a portion of the disputed amount to the local government in order to formally appeal the assessment. Such payment is recorded as a receivable if Newmont believes the amount is collectible.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Valuation of Deferred Tax Assets

The Company's deferred income tax assets include certain future tax benefits. The Company records a valuation allowance against any portion of those deferred income tax assets when it believes, based on the weight of available evidence, it is more likely than not that some portion or all of the deferred income tax asset will not be realized. The Company reviews the likelihood that it will realize the benefit of its deferred tax assets and therefore the need for valuation allowances on a quarterly basis, or more frequently if events indicate that a review is required. In determining the requirement for a valuation allowance, the historical and projected financial results of the legal entity or consolidated group recording the net deferred tax asset is considered, along with all other available positive and negative evidence.

Certain categories of evidence carry more weight in the analysis than others based upon the extent to which the evidence may be objectively verified. The Company looks to the nature and severity of cumulative pretax losses (if any) in the current three-year period ending on the evaluation date, recent pretax losses and/or expectations of future pretax losses. Other factors considered in the determination of the probability of the realization of the deferred tax assets include, but are not limited to:

- Earnings history;
- Projected future financial and taxable income based upon existing reserves and long-term estimates of commodity prices;
- The duration of statutory carry forward periods;
- Prudent and feasible tax planning strategies readily available that may alter the timing of reversal of the temporary difference;
- Nature of temporary differences and predictability of reversal patterns of existing temporary differences; and
- The sensitivity of future forecasted results to commodity prices and other factors.

Concluding that a valuation allowance is not required is difficult when there is significant negative evidence which is objective and verifiable, such as cumulative losses in recent years. The Company utilizes a rolling twelve quarters of pre-tax income or loss as a measure of its cumulative results in recent years. However, a cumulative three year loss is not solely determinative of the need for a valuation allowance. The Company also considers all other available positive and negative evidence in its analysis.

Reclamation and Remediation Costs

Reclamation obligations associated with operating and non-operating mine sites are recognized when an obligation is incurred and the estimated costs can be reasonably measured. Fair value is measured as the present value of expected cash flow estimates, after considering inflation, the Company's credit-adjusted risk-free rates and a market risk premium appropriate for the Company's operations. The liability is accreted over time through periodic charges to earnings. In addition, the asset retirement cost is capitalized as part of the asset's carrying value and amortized over the life of the related asset. Reclamation costs are periodically adjusted to reflect changes in the estimated present value resulting from the passage of time and revisions to the estimates of either the timing or amount of the reclamation costs. Changes in reclamation estimates at mines that are not currently operating, as the mine or portion of the mine site has entered the closure phase and has no substantive future economic value, are reflected in earnings in the period an estimate is revised. The estimated reclamation obligation is based on when spending for an existing disturbance is expected to occur. Costs included in estimated asset retirement obligations are discounted to their present value as cash flows are readily estimable over a period of up to fifty years. The Company reviews, on an annual basis, unless otherwise deemed necessary, the reclamation obligation at each mine site in accordance with ASC guidance for asset retirement obligations.

Remediation costs are accrued when it is probable that an obligation has been incurred and the cost can be reasonably estimated. Such cost estimates may include ongoing care, maintenance and monitoring costs. Changes in remediation estimates at operating and non-operating mines are reflected in earnings in the period an estimate is revised. Water treatment costs included in environmental remediation obligations are discounted to their present value as cash flows are readily estimable over a period up to fifty years.

Foreign Currency

The functional currency for the majority of the Company's operations is the U.S. dollar. Transaction gains and losses related to foreign currency denominated monetary assets and liabilities where the functional currency is the U.S. dollar are remeasured at current exchange rates and the resulting adjustments are included in *Other income (loss), net*. The financial statements of the Company's foreign entities with functional currencies other than the U.S. dollar are translated into U.S. dollars with the resulting adjustments charged or credited directly to *Accumulated other comprehensive income (loss)* in *Total equity*. All assets and liabilities are translated into the U.S. dollar using exchange rates in effect at the balance sheet date, while revenues and expenses are translated at the weighted average exchange rates for the period. The gains or losses on foreign currency rates on cash holdings in foreign currencies are included in *Effect of exchange rate changes on cash, cash equivalents and restricted cash* in the Company's Consolidated Statements of Cash Flows.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Stock-Based Compensation

The Company records stock-based compensation awards exchanged for employee services at fair value on the date of the grant and expenses the awards in the Consolidated Statements of Operations over the requisite employee service period. The fair value of RSUs are based on the Newmont stock price on the date of grant. The fair value of PSUs with market-related conditions is determined using a Monte Carlo simulation model. The fair value of PSUs with performance-related conditions is determined based on the Newmont stock price on the date of grant and the probability of the performance conditions being met. Stock-based compensation expense related to all awards, including awards with a market or performance condition that cliff vest, is generally recognized ratably over the requisite service period of the award on a straight-line basis. The Company recognizes forfeitures as they occur. The Company's estimates may be impacted by certain variables including, but not limited to, stock price volatility, employee retirement eligibility dates, the Company's performance and related tax impacts.

Net Income (Loss) per Common Share

Basic and diluted income (loss) per share are presented for *Net income (loss) attributable to Newmont stockholders*. Basic income (loss) per common share is computed by dividing income (loss) available to Newmont common stockholders by the weighted average number of common shares outstanding during the period. Diluted income (loss) per common share is computed similarly except that weighted average common shares is increased to reflect all dilutive instruments, including employee stock awards. Dilutive securities are excluded from the calculation of diluted weighted average common shares outstanding if their effect would be anti-dilutive based on the treasury stock method or due to a net loss from continuing operations.

Discontinued Operations

The Company reports the results of operations of a business as discontinued operations if a disposal represents a strategic shift that has (or will have) a major effect on the Company's operations and financial results when the business is classified as held for sale, in accordance with ASC 360, Property, Plant and Equipment and ASC 205-20, Presentation of Financial Statements - Discontinued Operations. Under ASC 360, assets may be classified as held for sale even though discontinued operations classification is not met. Equity method investments, which are specifically scoped out of ASC 360, can only be classified as held for sale if discontinued operations classification is also achieved. The results of discontinued operations are reported in *Net income (loss) from discontinued operations, net of tax* in the accompanying Consolidated Statements of Operations for current and prior periods, including any gain or loss recognized on closing or adjustment of the carrying amount to fair value less cost to sell.

Comprehensive Income (Loss)

In addition to *Net income (loss)*, *Comprehensive income (loss)* includes all changes in equity during a period, such as adjustments to minimum pension liabilities, foreign currency translation adjustments, changes in fair value of derivative instruments that qualify as cash flow hedges and cumulative unrecognized changes in fair value of marketable debt securities classified as available-for-sale, except those resulting from investments by and distributions to owners.

Care and Maintenance

The Company incurs certain direct operating costs and depreciation and amortization costs when operations are temporarily halted and placed in care and maintenance. Direct operating costs incurred while operations are temporarily placed in care and maintenance are included in *Other expense, net* as these costs do not benefit the productive process and are not related to sales. Depreciation and amortization costs incurred while operations are temporarily placed in care and maintenance are included in *Depreciation and amortization*.

Reclassifications

Certain amounts and disclosures in prior years have been reclassified to conform to the 2024 presentation.

Recently Adopted Accounting Pronouncements and Securities and Exchange Commission Rules

Segments Reporting

In November 2023, ASU 2023-07 was issued which improves disclosures about a public entity's reportable segments and addresses requests from investors and other allocators of capital for additional, more detailed information about a reportable segment's expenses. The ASU applies to all public entities that are required to report segment information in accordance with ASC 280. The Company adopted this standard as of January 1, 2024. The adoption did not have a material impact on the consolidated financial statements or disclosures.

Inflation Reduction Act

In August 2022, the U.S. government enacted the Inflation Reduction Act of 2022 (the "IRA") into law. The IRA introduced an excise tax on stock repurchases of 1% of the fair market value of stock repurchases net of stock issued during the tax year and a corporate alternative minimum tax (the "Corporate AMT") of 15% on the adjusted financial statement income ("AFSI") of corporations

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

with average AFSI exceeding \$1 billion over a three-year period. The excise tax on stock repurchases is effective on net stock repurchases made after December 31, 2022 and the Corporate AMT is effective for tax periods beginning in fiscal year 2023. While waiting on pending Department of Treasury regulatory guidance, the Company is continuing to monitor developments. Based upon information known to date, no material impacts are expected to the Consolidated Financial Statements, disclosures, or cash flows.

In 2024, Pillar II is set to take effect. The Pillar II agreement was signed by 138 countries with the intent to equalize corporate tax around the world by implementing a global minimum tax of 15%. As Newmont primarily does business in jurisdictions with a tax rate greater than 15%, the Company does not anticipate a material impact to the Consolidated Financial Statements.

Recently Issued Accounting Pronouncements and Securities and Exchange Commission Rules

Disaggregation of Income Statement Expenses

In November 2024, ASU 2024-03 was issued, requiring additional disclosures in the notes to the financial statements on the nature of certain expense captions presented on the face of the Consolidated Statement of Operations. The new guidance is effective for annual reporting periods beginning after December 15, 2026 and interim reporting periods beginning after December 15, 2027. The Company is currently evaluating the impacts of the guidance on its Consolidated Financial Statements.

SEC Climate Rule

In March 2024, the SEC issued a final rule that requires registrants to disclose climate-related information in their annual reports and in registration statements. In April 2024, the SEC chose to stay the newly adopted rulemaking pending judicial review of related consolidated Eighth Circuit petitions. If the stay is lifted, certain disclosures may be required in annual reports for the year ending December 31, 2025, filed in 2026. The Company is currently evaluating the impacts of the rules on its consolidated financial statements.

Improvement to Income Tax Disclosures

In December 2023, ASU 2023-09 was issued, requiring disaggregated information about the effective tax rate reconciliation and additional information on taxes paid that meet a qualitative threshold. The new guidance is effective for annual reporting periods beginning after December 15, 2024, with early adoption permitted. The Company is currently evaluating the impacts of the guidance on its Consolidated Financial Statements.

NOTE 3 ACQUISITIONS AND DIVESTITURES

Business Acquisition

On November 6, 2023 (the "acquisition date"), Newmont completed its business combination transaction with Newcrest, a public Australian mining company limited by shares, whereby Newmont, through Newmont Sub, acquired all of the ordinary shares of Newcrest, pursuant to a court-approved scheme of arrangement under Part 5.1 of the Australian Corporations Act 2001 (Cth) between Newcrest and its stockholders, as contemplated by a scheme implementation deed, dated as of May 15, 2023, by and among Newmont, Newmont Sub and Newcrest, as amended from time to time. Upon implementation, Newmont completed the business acquisition of Newcrest, in which Newmont was the acquirer and Newcrest became a direct wholly owned subsidiary of Newmont Sub and an indirect wholly owned subsidiary of Newmont (such acquisition, the "Newcrest transaction"). The acquisition of Newcrest increased the Company's gold and other metal reserves and expanded its operating jurisdictions.

The acquisition date fair value of the consideration transferred consisted of the following:

(in millions, except share and per share data)	Shares	Per Share	Purchase Consideration
Stock Consideration			
Shares of Newmont exchanged for Newcrest outstanding ordinary shares	357,691,627	\$ 37.88	\$ 13,549
Total Purchase Price			\$ 13,549

The Company retained an independent appraiser to determine the fair value of assets acquired and liabilities assumed. In accordance with the acquisition method of accounting, the purchase price of Newcrest was allocated to the acquired assets and assumed liabilities based on their estimated acquisition date fair values. The fair value estimates were based on income, market and cost valuation methods. The excess of the total consideration over the estimated fair value of the amounts assigned to the identifiable assets acquired and liabilities assumed was recorded as goodwill, which is not deductible for income tax purposes. The goodwill balance is mainly attributable to: (i) the acquisition of existing operating mines with access to an assembled workforce that cannot be duplicated at the same costs by new entrants; (ii) operating synergies anticipated from the integration of the operations of Newmont and Newcrest; and (iii) the application of Newmont's Full Potential program and potential strategic and financial benefits that include the increase in reserve base and opportunities to identify additional mineralization through exploration activities.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

In 2024, the Company completed the analysis to assign fair values to all assets acquired and liabilities assumed. The following table summarizes the final purchase price allocation for the Newcrest transaction:

ASSETS

Cash and cash equivalents	\$ 668
Trade receivables	212
Inventories	723
Stockpiles and ore on leach pads	113
Derivative assets	42
Other current assets	193
Current assets	1,951
Property, plant and mine development, net ⁽¹⁾	13,504
Investments ⁽²⁾	990
Stockpiles and ore on leach pads ⁽³⁾	219
Deferred income tax assets ⁽⁴⁾	75
Goodwill ⁽⁵⁾	2,401
Derivative assets	362
Other non-current assets ⁽⁶⁾	398
Total assets	19,900

LIABILITIES

Accounts payable	344
Employee-related benefits	143
Lease and other financing obligations	16
Debt	1,923
Other current liabilities	333
Current liabilities	2,759
Debt ⁽⁷⁾	1,373
Lease and other financing obligations	35
Reclamation and remediation liabilities ⁽⁸⁾	745
Deferred income tax liabilities ⁽⁴⁾	1,236
Employee-related benefits	192
Other non-current liabilities	11
Total liabilities	6,351
Net assets acquired	\$ 13,549

- ⁽¹⁾ The fair value of property, plant and mine development is based on applying income, market, and cost valuation methods. Measurement period adjustments of \$321 increased *Property, plant and mine development, net*, from the preliminary valuation primarily related to the Canadian, Lihir, and Telfer assets.
- ⁽²⁾ The fair value of the investments was determined by applying the market approach, based on quoted prices for the acquired investments.
- ⁽³⁾ The fair value of stockpiles and ore on leach pads is based on applying the income valuation method. Measurement period adjustments of \$85 increased *Stockpiles and ore on leach pads* from the preliminary valuation primarily relating to the valuation of stockpiles at Lihir.
- ⁽⁴⁾ Deferred income tax assets and liabilities represent the future tax benefit or future tax expense associated with the differences between the fair value allocated to assets (excluding the majority of the goodwill balance) and liabilities and a tax basis increase to the fair value of the assets acquired in Australia and the historical carryover tax basis of assets and liabilities in all other jurisdictions. No deferred tax liability is recognized for the basis difference inherent in the fair value allocated to goodwill. Measurement period adjustments resulted in *Deferred income tax assets* decreasing by \$114 and *Deferred income tax liabilities* decreasing by \$95 from the preliminary valuation.
- ⁽⁵⁾ Goodwill is attributable to the following reportable segments: \$669 to Brucejack; \$539 to Red Chris; \$249 to Cadia; and \$944 to Lihir. Measurement period adjustments resulted in an overall reduction to *Goodwill* of \$343 from the preliminary valuation.
- ⁽⁶⁾ Measurement period adjustments of \$305 increased *Other non-current assets* from the preliminary valuation primarily due to the recognition of an intangible asset.
- ⁽⁷⁾ The fair value of the Newcrest senior notes was measured using a market approach, based on quoted prices for the acquired debt.
- ⁽⁸⁾ The fair value of reclamation and remediation liabilities is based on the expected amounts and timing of cash flows for closure activities and discounted to present value using a credit-adjusted risk-free rate as of the acquisition date. Key assumptions include the costs and timing of key closure activities based on the life of mine plans, including estimates and timing of monitoring and water management costs (if applicable) after the completion of initial closure activities. Measurement period adjustments of \$352 increased *Reclamation and remediation liabilities*.

Sales and Net income (loss) attributable to Newmont stockholders in the Consolidated Statement of Operations includes Newcrest revenue of \$944 and Newcrest net income of \$136 from the acquisition date to December 31, 2023.

NEWMONT CORPORATION

(dollars in millions, except per share, per ounce and per pound amounts)

Pro Forma Financial Information (unaudited)

The following unaudited pro forma financial information presents consolidated results assuming the Newcrest transaction occurred on January 1, 2022.

	Year Ended December 31,	
	2023	2022
Sales	\$ 15,432	\$ 16,418
Net income (loss) attributable to Newmont stockholders ⁽¹⁾	\$ (1,991)	\$ 410

⁽¹⁾ Includes \$464 of Newcrest transaction and integration costs for the year ended December 31, 2023.

Divestitures

Based on a comprehensive review of the Company's portfolio of assets, the Company's Board of Directors approved a portfolio optimization program to divest six non-core assets and a development project in February 2024. The non-core assets to be divested include the CC&V, Musselwhite, Porcupine, Éléonore, Telfer, and Akyem reportable segments, and the Coffee development project which is included within the non-operating segment Corporate and Other. The Telfer disposal group also includes the Havieron development project, which was 70% owned by the Company and accounted for under proportionate consolidation, and other related assets. As of December 31, 2023, the aggregate net book value of the non-core assets and the development project was \$3,419.

In February 2024, based on progress made through the Company's active sales program and management's expectation that the sale is probable and will be completed within 12 months, the Company concluded that these non-core assets and the development project met the accounting requirements to be presented as held for sale. Upon meeting the requirements to be presented as held for sale, the six non-core assets and the development project were recorded at the lower of the carrying value or fair value, less costs to sell, and are periodically valued until sale occurs.

In the September 2024, the Company entered into a definitive agreement to sell the assets of Telfer reportable segment, which closed in the fourth quarter of 2024. Refer below for further information on the sale. Additionally, in the fourth quarter of 2024 the Company entered into definitive agreements to sell the reportable segments of Akyem, Musselwhite, Éléonore, and CC&V, and in January 2025 the Company entered into a definitive agreement to sell the Porcupine reportable segment, all of which are expected to close in the first half of 2025 and remained designated as held for sale at December 31, 2024.

Telfer Sale. The Company completed the sale of the assets of the Telfer reportable segment, including its 70% interest in the Havieron development project and other related assets, to Greatland Gold plc ("Greatland") on December 4, 2024 (the "Telfer Sale"). Under the terms of the sale agreement, the Company received total consideration of \$453, which includes (i) cash consideration of \$217, net of working capital adjustments, (ii) equity consideration of \$242 in the form of 2.7 billion Greatland shares to be accounted for as an equity method investment for which the Company elected the fair value option, (iii) an option of \$67 in which a third party has the option to acquire 1.3 billion of the Company's Greatland shares at a set price exercisable for four years, accounted for as a financial liability for which the Company elected the fair value option ("Greatland option"), and (iv) the potential to receive contingent payments of up to \$100 tied to future Havieron production and gold price over a five-year period. The contingent payments do not meet the definition of a derivative and are considered to be a financial asset, for which the Company recorded at fair value at completion of the sale, with a fair value of \$61. The agreement is inclusive of transitional services support to be provided by the Company for a one year period following close.

As a result of the sale, a loss of \$160 is recognized in *Loss on assets held for sale* for the year ended December 31, 2024. Certain working capital adjustments are to be finalized over a period of up to 180 days from completion of the sale. Any resulting revisions will be settled in cash, with an offsetting impact to recognized in *Other income (loss), net*. Adjustments are not expected to be material.

Assets and liabilities held for sale. The non-core assets and the development project classified as held for sale are recorded at the lower of the carrying value or fair value, less costs to sell. These assets are periodically valued until sale occurs with any resulting gain or loss recognized in *Loss on assets held for sale*.

As a result, for the year ended December 31, 2024 a loss of \$859 was recognized within *Loss on assets held for sale*, of which \$160 and \$699 related to Telfer and the disposal groups remaining as held for sale as of December 31, 2024, respectively. The \$699 loss on the disposal groups remaining as held for sale resulted in an aggregate net book value of \$2,432 at December 31, 2024. A resulting tax impact of \$255 was recognized for the year ended December 31, 2024, resulting in a total loss of \$1,114 recognized for the year ended December 31, 2024, within *Loss on assets held for sale*.

The estimated fair values of net assets held for sale were determined using the market approach for the Akyem, Musselwhite, Éléonore, CC&V, and Porcupine reportable segments utilizing the respective definitive agreements. The estimated fair value of net assets held for sale for the Coffee development project were determined using the income approach which included the following significant inputs: (i) cash flow estimates, (ii) a short-term gold price of \$2,700 per ounce, (iii) a long-term gold price of \$1,900 per

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

ounce, (iv) current estimates of resources and exploration potential, and (v) a reporting unit specific discount rate of 9.75%. The estimated fair values are considered a non-recurring Level 2 or 3 fair value measurement and additional losses may be incurred as the Company continues to evaluate the definitive sales agreements, as the active sales program progresses, or as fair value estimates change.

The following table presents the carrying value of the major classes of assets and liabilities held for sale by disposal group as of December 31, 2024, prior to recognition of the write-down of \$699 for the year ended December 31, 2024:

	CC&V ⁽¹⁾	Musselwhite ⁽¹⁾	Porcupine ⁽¹⁾	Éléonore ⁽¹⁾	Akyem ⁽¹⁾	Coffee Project ⁽²⁾	Total
Assets held for sale:							
Property, plant and mine development, net	\$ 170	\$ 1,063	\$ 1,541	\$ 785	\$ 559	\$ 321	\$ 4,439
Other assets	408	39	93	70	258	1	869
Carrying value of assets held for sale	<u>\$ 578</u>	<u>\$ 1,102</u>	<u>\$ 1,634</u>	<u>\$ 855</u>	<u>\$ 817</u>	<u>\$ 322</u>	<u>\$ 5,308</u>
Liabilities held for sale:							
Reclamation and remediation liabilities	\$ 334	\$ 82	\$ 563	\$ 87	\$ 427	\$ 3	\$ 1,496
Other liabilities	37	257	223	71	91	2	681
Carrying value of liabilities held for sale	<u>\$ 371</u>	<u>\$ 339</u>	<u>\$ 786</u>	<u>\$ 158</u>	<u>\$ 518</u>	<u>\$ 5</u>	<u>\$ 2,177</u>

⁽¹⁾ In the fourth quarter of 2024, the Company entered into binding agreements to sell the Akyem, Musselwhite, Éléonore, and CC&V reportable segments. Additionally, in January 2025 the Company entered into a definitive agreement to sell the Porcupine reportable segment. The sales are expected to close in the first half of 2025.

⁽²⁾ The Coffee Project is included in the non-operating segment Corporate and Other in Note 4.

While the Company remains committed to a plan to sell these assets for a fair price, there is a possibility that the assets held for sale may exceed one year due to events or circumstances beyond the Company's control.

NOTE 4 SEGMENT INFORMATION

The Company regularly reviews its segment reporting for alignment with its strategic goals and operational structure as well as for evaluation of business performance and allocation of resources by Newmont's Chief Operating Decision Maker ("CODM"), which is the Chief Executive Officer. The Company's reportable segments consist of each of its 16 mining operations that it manages and its 38.5% proportionate interest in Nevada Gold Mines ("NGM") which it does not directly manage. The reportable segments at December 31, 2024 include certain reportable segments that are designated as held for sale and exclude those which have been divested. Refer to Note 3 for further information.

In the following tables, *Income (loss) before income and mining tax and other items* from reportable segments does not reflect general corporate expenses, interest (except project-specific interest), or income and mining taxes. Intercompany revenue and expense amounts have been eliminated within each segment in order to report on the basis that management uses internally for evaluating segment performance. The Company's business activities and operating segments that are not considered reportable, including all equity method investments, are reported in the non-operating segment Corporate and Other, which has been provided for reconciliation purposes.

The CODM uses *Income (loss) before mining tax and other items* to evaluate income generated from segment assets in deciding whether to reinvest profits into the mine operation or reallocate for other capital priorities under the Company's capital allocation strategy. Additionally, the CODM primarily uses this metric to assess performance of the segment, plan and forecast future business operations, and benchmark to competitors.

The financial information relating to the Company's segments is as follows:

⁽²⁾ The Company purchases its proportionate share of gold doré from NGM for resale to third parties. Gold doré purchases from NGM totaled \$2,022.

Trade Receivables and Provisional Sales

At December 31, 2024 and December 31, 2023, *Trade receivables* primarily consisted of sales from provisionally priced concentrate and other production. The impact to *Sales* from revenue recognized due to the changes in pricing is an increase (decrease) of \$125, \$37, and \$(34) for the years ended December 31, 2024, 2023, and 2022, respectively.

At December 31, 2024, Newmont had the following provisionally priced concentrate sales subject to final pricing over the next several months:

	Provisionally Priced Sales Subject to Final Pricing ⁽¹⁾	Average Provisional Price (per ounce/ pound)
Gold (ounces, in thousands)	265	\$ 2,635
Copper (pounds, in millions)	85	\$ 3.99
Silver (ounces, in millions)	6	\$ 28.99
Lead (pounds, in millions)	52	\$ 0.88
Zinc (pounds, in millions)	114	\$ 1.34

⁽¹⁾ Includes provisionally priced by-product sales subject to final pricing, which are recognized in *Costs applicable to sales*.

Silver Streaming Agreement

The Company is obligated to sell 25% of silver production from the Peñasquito mine to Wheaton Precious Metals Corporation at the lesser of market price or a fixed contract price, subject to an annual inflation adjustment of up to 1.65%. This agreement contains off-market terms and was initially recognized at its acquisition date fair value as a finite-lived intangible liability. The current and non-current portion are recorded to *Other current liabilities* and *Silver streaming agreement*, respectively. The Company's policy is to amortize the liability into *Sales* each period using the units-of-production method. During the years ended December 31, 2024, 2023, and 2022, the Company amortized \$91, \$42, and \$73, respectively, of the liability into revenue. At December 31, 2024 and 2023, the value of the liability included in the Consolidated Balance Sheet was \$775 and \$866, respectively.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Revenue by Geographic Area

Newmont primarily conducts metal sales in U.S. dollars, and therefore *Sales* are not exposed to fluctuations in foreign currencies. Revenues from sales attributed to countries based on the location of the customer were as follows:

	Year Ended December 31,		
	2024	2023	2022
United Kingdom ⁽¹⁾	\$ 10,966	\$ 7,637	\$ 7,537
South Korea	1,956	975	1,426
Japan	1,920	512	442
Philippines	709	451	340
Switzerland	638	600	721
Mexico	600	240	604
Australia	409	376	7
United States	2	48	24
Other	1,482	973	814
	<u>\$ 18,682</u>	<u>\$ 11,812</u>	<u>\$ 11,915</u>

⁽¹⁾ Includes \$91, \$42, and \$73 related to non-cash amortization of the silver streaming agreement liability for the years ended December 31, 2024, 2023, and 2022, respectively.

Revenue by Major Customer

As gold can be sold through numerous gold market traders worldwide, the Company is not economically dependent on a limited number of customers for the sale of its product. The Company sells copper, silver, lead, and zinc predominantly in the form of concentrates. The concentrates are sold under a combination of short-term and long-term supply contracts with processing fees based on the demand for these concentrates in the global marketplace.

Customers with revenue in excess of 10% of total *Sales* consisted of the following customers in 2024: Standard Chartered \$4,833 (26%), JPMorgan Chase \$2,317 (12%), and Royal Bank of Canada \$1,897 (10%); in 2023: JPMorgan Chase \$2,583 (22%), Royal Bank of Canada \$1,765 (15%), Standard Chartered \$1,659 (14%), and Toronto Dominion Bank \$1,630 (14%); in 2022: Standard Chartered \$4,179 (35%) and JPMorgan Chase \$1,503 (13%).

NOTE 6 RECLAMATION AND REMEDIATION

The Company's mining and exploration activities are subject to various domestic and international laws and regulations governing the protection of the environment. These laws and regulations are continually changing and are generally becoming more restrictive. The Company conducts its operations to protect public health and the environment and believes its operations are in compliance with applicable laws and regulations in all material respects. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations, but cannot predict the full amount of such future expenditures. Estimated future reclamation and remediation costs are based principally on current legal and regulatory requirements.

The Company's *Reclamation and remediation* expense consisted of:

	Year Ended December 31,		
	2024	2023	2022
Reclamation adjustments and other	\$ (108)	\$ 1,207	\$ 646
Reclamation accretion	365	238	173
Reclamation expense	257	1,445	819
Remediation adjustments and other	64	81	96
Remediation accretion	7	7	6
Remediation expense	71	88	102
Reclamation and remediation	<u>\$ 328</u>	<u>\$ 1,533</u>	<u>\$ 921</u>

In 2024, reclamation adjustments were primarily due to a \$136 decrease at portions of the Yanacocha site that are no longer in production and with no expected substantive economic value (i.e., non-operating) as a result of updated cost estimates. In 2023, reclamation adjustments were primarily due to increased water management costs at non-operating portions of the Yanacocha site, which resulted in an increase of \$1,101. In 2022, reclamation adjustments were primarily due to higher estimated closure costs resulting from cost inflation and increased water management costs at portions of the Yanacocha and Porcupine site operations that are non-operating that resulted in increases of \$529 and \$91, respectively.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

In 2024, remediation adjustments were primarily due to the completion of haul road safety enhancements, continued clean up of contaminated materials, and closure of the three mine portals at the Ross Adams mine. In 2023 remediation adjustments were primarily due to higher water management costs and project execution delays at the Midnite mine and Dawn mill sites. In 2022, remediation adjustments are primarily due to higher waste disposal costs and project execution delays at the Midnite mine and Dawn mill sites.

The following are reconciliations of *Reclamation and remediation liabilities*:

	Reclamation	Remediation	Total
Balance at January 1, 2023	\$ 6,731	\$ 373	\$ 7,104
Additions, changes in estimates and other	1,246	65	1,311
Additions from the Newcrest transaction	401	—	401
Payments, net	(231)	(44)	(275)

Balance at December 31, 2023	8,385	401	8,786
Additions, changes in estimates and other	41	44	85
Acquisitions and divestitures ⁽⁴⁾	71	—	71
Payments, net	(351)	(82)	(433)
Accretion expense	365	7	372
Reclassification to <i>Liabilities held for sale</i>	(1,496)	—	(1,496)
Balance at December 31, 2024	<u>\$ 7,015</u>	<u>\$ 370</u>	<u>\$ 7,385</u>

	At December 31,					
	2024			2023		
	Reclamation	Remediation	Total	Reclamation	Remediation	Total
Current ⁽¹⁾	\$ 928	\$ 63	\$ 991	\$ 558	\$ 61	\$ 619
Non-current ⁽²⁾	6,087	307	6,394	7,827	340	8,167
Total ⁽³⁾	<u>\$ 7,015</u>	<u>\$ 370</u>	<u>\$ 7,385</u>	<u>\$ 8,385</u>	<u>\$ 401</u>	<u>\$ 8,786</u>

⁽¹⁾ The current portion of reclamation and remediation liabilities are included in *Other current liabilities*. Refer to Note 22.

⁽²⁾ The non-current portion of reclamation and remediation liabilities are included in *Reclamation and remediation liabilities*.

⁽³⁾ Total reclamation liabilities includes \$4,546 and \$4,804 related to Yanacocha at December 31, 2024 and 2023, respectively.

⁽⁴⁾ During 2024, measurement period adjustments of \$349 increased *Reclamation and remediation liabilities* from refinements to the preliminary valuation of the Newcrest sites. These adjustments were partially offset by \$278 as a result of the sale of the assets of the Telfer reportable segment in the fourth quarter of 2024.

The Company is also involved in several matters concerning environmental remediation obligations associated with former, primarily historic, mining activities. Generally, these matters concern developing and implementing remediation plans at the various sites involved. Depending upon the ultimate resolution of these matters, the Company believes that it is reasonably possible that the liability for these matters could be as much as 51% greater or 5% lower than the amount accrued at December 31, 2024. The amounts accrued are reviewed periodically based upon facts and circumstances available at the time. Changes in estimates are included in *Other current liabilities* and *Reclamation and remediation liabilities* in the period estimates are revised.

Included in *Assets held for sale* at December 31, 2024 is \$93 of restricted cash held for purposes of settling reclamation and remediation obligations at Akyem.

Included in *Other non-current assets* at December 31, 2024 and 2023 are \$29 and \$81 respectively, of non-current restricted cash held for purposes of settling reclamation and remediation obligations. The amounts at December 31, 2024 primarily relate to Ahafo and San Jose Reservoir at Yanacocha. The amounts at December 31, 2023 primarily relate to the Ahafo and Akyem mines in Ghana, Africa.

Included in *Other non-current assets* at December 31, 2024 and 2023 was \$15 and \$21, respectively, of non-current restricted investments, which are legally pledged for purposes of settling reclamation and remediation obligations. The amounts at December 31, 2024 and 2023 primarily relate to the San Jose Reservoir at Yanacocha.

Refer to Note 25 for further discussion of reclamation and remediation matters.

Other	31	31		17	—	17	4	—	4
Impairment charges	<u>\$ 78</u>	<u>\$ 78</u>		<u>\$ 131</u>	<u>\$ 1,760</u>	<u>\$ 1,891</u>	<u>\$ 520</u>	<u>\$ 800</u>	<u>\$ 1,320</u>

(1) Primarily relates to non-cash write-downs of materials and supplies inventory and various assets that are no longer in use, except for certain impairment charges recognized for the year ended December 31, 2022 as described below.

(2) At December 31, 2024 and 2023, the Company recognized its proportionate share of the non-cash impairment charge on long-lived assets at NGM. The impairment charge resulted in a remaining balance of \$2 and \$22 within *Property, plant and mine development, net* at December 31, 2024 and 2023, respectively. The remaining balances were estimated based on observable market values for comparable assets for the individual assets that were determined to have residual market value.

(3) Sites are classified as held for sale as of December 31, 2024. Refer to Note 3 for further information.

The estimated cash flows utilized in both the long-lived asset and goodwill impairment evaluations are derived from the Company's current business plans. The Company completed its annual business plan update which reflected updated mine plans, certain adverse changes in market conditions, including inflationary pressures to costs and capital, strategic evaluation regarding the use of capital, and updates to asset retirement costs.

Impairment of goodwill

The Company evaluates its goodwill for impairment annually at December 31 or when events or changes in circumstances indicate that the fair value of a reporting unit is less than its carrying value. Each operating mine is considered a distinct reporting unit for purposes of goodwill impairment testing. Based on the December 31, 2024 review, the Company concluded that *Goodwill* was not impaired at any of the reporting units.

Based on the December 31, 2023 review, the Company concluded that *Goodwill* was impaired at the Musselwhite, Éléonore and Peñasquito reporting units. The goodwill impairments at Musselwhite and Éléonore were driven by a deterioration in underlying cash flows from higher costs due to inflationary pressures, and resulted in non-cash impairment charges of \$293 and \$246, respectively, which represented the full goodwill balance of the reporting units prior to impairment. The goodwill impairment at Peñasquito was also driven by lower expected cash flows, primarily due to an update to the geological model that impacted expected metal grade and recoveries, as well as higher costs due to inflationary pressures, and resulted in a non-cash impairment charge of \$1,210, which represented the full goodwill balance of the reporting unit prior to impairment. The long-lived assets of Musselwhite, Éléonore and Peñasquito were evaluated for impairment prior to the quantitative goodwill assessment and no impairment was identified.

In addition, the Company recorded a non-cash impairment charge of \$11 at NGM as a result of the decision to not pursue permitting for Phase 2 mining at Long Canyon. As a result, NGM placed Long Canyon on long-term care and maintenance and revised their business plan. The impairment represented the full goodwill balance at Long Canyon based on the Company's proportionate interest in NGM.

The Company measured the impairments by comparing the total fair value of the operations to the corresponding reporting unit carrying value. The estimated fair value was determined using the income approach and is considered a non-recurring level 3 fair value measurement. Significant inputs to the fair value measured included (i) updated cash flow information from the Company's current business and closure plans, (ii) a short-term gold price of \$1,950, (iii) a long-term gold price of \$1,700, (iv) current estimates of reserves, resources, and exploration potential, and (v) a reporting unit specific discount rate of 10.00% at Musselwhite, 17.50% at Éléonore, and 6.75% at Peñasquito. The selected discount rates for Musselwhite and Éléonore incorporate additional premium related to operational risk at these sites.

Based on the December 31, 2022 review, the Company concluded that *Goodwill* was impaired at the Porcupine and the Cerro Negro reporting units. The Porcupine goodwill impairment was driven by a deterioration in underlying cash flows from higher costs due to inflationary pressures and higher capital costs related to safety enhancements and the expansion of the active tailings storage

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

facility, ensuring GISTM compliance, as well as an increase to the asset retirement cost, and resulted in a non-cash impairment charge of \$341, which represented the full goodwill balance of the reporting unit prior to impairment. The Cerro Negro goodwill impairment was driven by a 14% country specific discount rate that reflects current macroeconomic risk and uncertainty in Argentina, and resulted in a non-cash impairment charge of \$459, which represented the full goodwill balance of the reporting unit prior to impairment. The long-lived assets of Porcupine and Cerro Negro were evaluated for impairment prior to the quantitative goodwill test and no impairment was identified.

The Company measured the impairments by comparing the total fair value of the existing operations to the corresponding reporting unit carrying value. The estimated fair value was determined using the income approach and is considered a non-recurring level 3 fair value measurement. Significant inputs to the fair value measured included (i) updated cash flow information from the Company's current business and closure plans, (ii) a short-term gold price of \$1,750, (iii) a long-term gold price of \$1,600, (iv) current estimates of reserves, resources, and exploration potential, and (v) a country specific discount rate of 4.50% in Canada and 14% in Argentina.

Impairment of long-lived and other assets

The Company reviews and evaluates its long-lived assets for impairment when events or changes in circumstances indicate that the related carrying amounts may not be recoverable.

During the fourth quarter of 2022, the Company determined that an impairment indicator existed at CC&V. This determination was based on the updated business plan, which reflected a deterioration in underlying cash flows from lower production, impacted by the decision to place the mill on long-term care and maintenance, higher costs due to inflationary pressures, as well as an increase to the asset retirement cost. As a result of the impairment indicator, a recoverability test was performed and the Company concluded the long-lived assets at CC&V were impaired resulting in a non-cash impairment charge of \$511 and a remaining balance of \$25 within *Property, plant and mine development, net* at December 31, 2022. The Company measured the impairment by comparing the total fair value of the existing operations to the carrying value of the corresponding assets. The estimated fair value was determined using the income approach and is considered a non-recurring level 3 fair value measurement. Significant inputs to the fair value measurement included (i) updated cash flow information from the Company's current business and closure plans, (ii) a short-term gold price of \$1,750, (iii) a long-term gold price of \$1,600, (iv) current estimates of reserves, resources, and exploration potential, and (v) a country specific pre-tax discount rate of 6.75%.

NOTE 8 OTHER EXPENSE, NET

	Year Ended December 31,		
	2024	2023	2022
Newcrest transaction and integration costs ⁽¹⁾	\$ 72	\$ 464	\$ —
Settlement costs ⁽²⁾	44	7	22

Gain on debt extinguishment ⁽²⁾	32	—	—
Insurance proceeds ⁽³⁾	12	37	14
Pension settlements ⁽⁴⁾	(1)	(9)	(137)
Other	32	36	34
Other income (loss), net	<u>\$ 425</u>	<u>\$ (88)</u>	<u>\$ (27)</u>

- ⁽¹⁾ Primarily consists of the gain on sale of the Stream Credit Facility Agreement ("SCFA") of \$49 partially offset by the loss of \$29 related to the abandonment of the near-pit sizing and conveying system at Peñasquito for the year ended December 31, 2024; the loss of \$235 related to the abandonment of the pyrite leach plant at Peñasquito for the year ended December 31, 2023; and the sale of the Company's 18.75% interest in Minera Agua Rica Alumbra Limited ("MARA") for \$61 for the year ended December 31, 2022.
- ⁽²⁾ In 2024, the Company partially redeemed certain Senior Notes, resulting in a gain on extinguishment of \$38, which is partially offset by the acceleration of \$6 loss from *Accumulated other comprehensive income (loss)* related to the previously terminated interest rate cash flow hedges. Refer to Note 20 for additional information.
- ⁽³⁾ For the year ended December 31, 2024, primarily consists of insurance proceeds received of \$12 related to a conveyor failure at Ahafo. For the year ended December 31, 2023, primarily consists of insurance proceeds received of \$45 and \$11 related to Tanami due to significant rainfall and flooding in early 2023 and a conveyor failure at Ahafo, respectively. Of these amounts, \$31 and \$6, respectively, were recognized in *Other income (loss), net*, and primarily relate to business interruption coverage. The remaining amounts were recognized within *Costs applicable to sales*.
- ⁽⁴⁾ Primarily represents pension settlement charges due to the pension annuitization in 2022 and lump sum payments to participants. For additional information regarding pension and other post-employment benefits, refer to Note 11.

NOTE 10 INCOME AND MINING TAXES

The Company's *Income and mining tax benefit (expense)* consisted of:

	Year Ended December 31,

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The Company's *Income and mining tax benefit (expense)* differed from the amounts computed by applying the United States statutory corporate income tax rate for the following reasons:

	Year Ended December 31,					
	2024		2023		2022	
Income (loss) before income and mining tax and other items	\$	4,577	\$	(2,031)	\$	(51)
U.S. Federal statutory tax rate	21 %	(961)	21 %	427	21 %	11
Reconciling items:						
Percentage depletion	(1)	63	4	72	90	46
Change in valuation allowance on deferred tax assets	(8)	302	(18)	(358)	(569)	(290)
Rate differential for foreign earnings indefinitely reinvested	9	(398)	7	148	(151)	(77)
Mining and other taxes (net of associated federal benefit)	5	(237)	(4)	(87)	(231)	(118)
Uncertain tax positions ⁽¹⁾	(1)	63	1	28	261	133
Akyem recognition of DTL for assets held for sale	1	(49)	—	—	—	—
Goodwill write-downs	—	—	(25)	(498)	(482)	(246)
Expiration of U.S. capital losses and foreign tax credits	1	(47)	(10)	(195)	(61)	(31)
Transactions	—	—	—	(1)	100	51
Other ⁽²⁾	4	(133)	(2)	(62)	130	66
Income and mining tax benefit (expense)	31 %	\$ (1,397)	(26)%	\$ (526)	(892)%	\$ (455)

⁽¹⁾ Includes net tax benefit of \$125, primarily consisting of a reduction in the related uncertain tax position of \$95 and a valuation release of \$29 for the full settlement with the Mexican Tax Authority entered into during the second quarter of 2022.

⁽²⁾ Primarily consists of the impact of foreign exchange and earnings, the U.S. tax effect of minority interest attributable to non-U.S. investees, and the impact of return to provision adjustments.

Factors that Significantly Impact Effective Tax Rate (Other than Factors Described Separately Below)

Percentage depletion allowances (tax deductions for depletion that may exceed the tax basis in the mineral reserves) are available to the Company under the income tax laws of the United States for operations conducted in the United States or through branches and partnerships owned by U.S. subsidiaries included in the consolidated United States income tax return. These deductions are highly sensitive to the price of gold and other metals produced by the Company.

The Company operates in various jurisdictions around the world that have statutory tax rates that are significantly different than those of the U.S. These differences combine to move the overall effective tax rate higher than the U.S. statutory rate.

Mining taxes in Nevada, Mexico, Canada, Peru, and Australia represent state and provincial taxes levied on mining operations and are classified as income taxes as such taxes are based on a percentage of mining profits.

In the U.S., capital losses may be carried forward five years to offset capital gains. Capital loss carryforwards of \$222, \$—, and \$—, expired in 2024, 2023 and 2022, respectively. The Company carries a full valuation allowance on U.S. capital losses.

In 2024, 2023, and 2022, the U.S. had foreign tax credits of \$—, \$193, and \$31, respectively, expire.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Components of the Company's deferred income tax assets (liabilities) are as follows:

	At December 31,	
	2024	2023
Deferred income tax assets:		
Property, plant and mine development	\$ 887	\$ 746
Inventory	132	320
Reclamation and remediation	2,077	2,362
Net operating losses, capital losses and tax credits	2,297	2,655
Employee-related benefits	24	97
Derivative instruments and unrealized loss on investments	79	69
Foreign exchange and financing obligations	58	86
Silver streaming agreement	253	332
Other	555	643
	<u>6,362</u>	<u>7,310</u>
Valuation allowances	<u>(4,363)</u>	<u>(4,652)</u>
	<u>\$ 1,999</u>	<u>\$ 2,658</u>
Deferred income tax liabilities:		
Property, plant and mine development	\$ (3,749)	\$ (4,425)
Inventory	(132)	(160)
Investment in partnerships and subsidiaries	(582)	(579)
Other	(232)	(213)
	<u>(4,695)</u>	<u>(5,377)</u>
Net deferred income tax assets (liabilities)	<u>\$ (2,696)</u>	<u>\$ (2,719)</u>

These amounts reflect the classification and presentation that is reported for each tax jurisdiction in which the Company operates.

Valuation of Deferred Tax Assets

The Company assesses the available positive and negative evidence to estimate if sufficient future taxable income will be generated to utilize the existing deferred tax assets. A significant piece of objective negative evidence evaluated was the recent pretax losses and/or expectations of future pretax losses. Such objective evidence limits the ability to consider other subjective evidence such as the Company's projections for future growth. However, the amount of the deferred tax asset considered realizable could be adjusted if estimates of future taxable income during the carryforward period are increased, if objective negative evidence in the form of cumulative losses is no longer present or if additional weight were given to subjective evidence such as the Company's projections for growth.

During 2024, the Company recorded a decrease to the valuation allowance of \$302 and a corresponding tax benefit, primarily driven by decreases in the net deferred tax asset in Argentina, the valuation allowance on Canada's tax credits and property, plant and mine development, and the release associated with the expiration of capital loss carryforwards. There were additional valuation allowance established as a result of purchase accounting for the Newcrest transaction of \$168.

Refer to Note 2 for additional risk factors that could impact the Company's ability to realize the deferred tax assets.

Tax Loss Carryforwards, Foreign Tax Credits, and Canadian Tax Credits

At December 31, 2024 and 2023, the Company had (i) \$2,005 and \$3,678 of net operating loss carry forwards, respectively; and (ii) \$414 and \$513 of tax credit carry forwards, respectively. At December 31, 2024 and 2023, \$760 and \$989, respectively, of net operating loss carry forwards are attributable to the U.S., Australia, and France for which current tax law provides no expiration period. The net operating loss carry forward in Canada of \$772 will expire by 2043. The net operating loss carryforward in Mexico of \$173 will expire by 2033. The net operating loss carry forward in other countries is \$300.

Tax credit carry forwards for 2024 and 2023 of \$414 and \$284, respectively, consist of foreign tax credits available in the United States; substantially all such credits not utilized will expire at the end of 2029, and of solar tax credit for 2024 and 2023 of \$27 and \$19, respectively, which will expire by 2046. Canadian tax credits for 2024 and 2023 of \$77 and \$210, respectively, consist of investment tax credits and minimum mining tax credits. Canadian investment tax credits for 2024 consisted of \$72 which will substantially expire by 2043, and mining tax credits of \$5 which will expire by 2042.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Company's Unrecognized Tax Benefits

A reconciliation of the beginning and ending amount of gross unrecognized tax benefits, exclusive of interest and penalties, is as follows:

	2024	2023	2022
Total amount of gross unrecognized tax benefits at beginning of year	\$ 144	\$ 190	\$ 245
Additions (reductions) for tax positions of prior years	(8)	13	(1)
Additions for tax positions of current year	—	2	—
Reductions due to settlements with taxing authorities	(2)	(18)	(53)
Reductions due to lapse of statute of limitations	(23)	(43)	(1)
Total amount of gross unrecognized tax benefits at end of year	<u>\$ 111</u>	<u>\$ 144</u>	<u>\$ 190</u>

At December 31, 2024, 2023, and 2022, \$125, \$190, and \$219, respectively, represent the amount of unrecognized tax benefits, inclusive of interest and penalties that, if recognized, would impact the Company's effective income tax rate.

The Company operates in numerous countries around the world and is subject to, and pays annual income taxes under, the various income tax regimes in the countries in which it operates. Some of these tax regimes are defined by contractual agreements with the local government, and others are defined by the general corporate income tax laws of the country. The Company has historically filed, and continues to file, all required income tax returns and paid the taxes reasonably determined to be due. The tax rules and regulations in many countries are highly complex and subject to interpretation. From time to time, the Company is subject to a review of its historic income tax filings and in connection with such reviews, disputes can arise with the taxing authorities over the interpretation or application of certain rules to the Company's business conducted within the country involved.

Through the due diligence and integration processes, the Company has not identified new uncertain tax positions as a result of the Newcrest transaction.

The Australian Taxation Office ("ATO") is conducting a limited review of the Company's prior year tax returns. The ATO is reviewing an internal reorganization executed in 2011 when Newmont completed a restructure of the shareholding in the Company's Australian subsidiaries. To date, the Company has responded to inquiries from the ATO and provided them with supporting documentation for the transaction and the Company's associated tax positions. One aspect of the ATO review relates to an Australian capital gains tax that applies to sales or transfers of stock in certain types of entities. In the fourth quarter of 2017, the ATO notified the Company that it believes the 2011 reorganization is subject to capital gains tax of approximately \$85 (including interest and penalties). The Company disputes this conclusion and is vigorously defending its position that the transaction is not subject to this tax. In the fourth quarter of 2017, the Company made a \$24 payment to the ATO and lodged an Appeal with the Australian Federal Court. The court proceedings were held during the third quarter of 2024 and the Company is currently awaiting the judgment, which is expected during the second quarter of 2025.

In the third quarter of 2022, the Administración Federal de Ingresos Públicos ("AFIP") in Argentina notified the Company that it completed the 2016 transfer pricing review. The AFIP has questioned the Company's treatment of intercompany loans and believes they should be akin to capital contributions. In the fourth quarter of 2024, while the Company still believes in the merits of the position, it has opted into Argentina's newly implemented Tax Amnesty Program and made a settlement payment of \$8 in 2024 with the remaining \$26 to be paid in early 2025. The Tax Amnesty Program reduces the tax penalties and alleviates potential criminal charges.

The Company and/or subsidiaries file income tax returns in the U.S. Federal jurisdiction, and various state and foreign jurisdictions. With few exceptions, the Company is no longer subject to U.S. Federal, state and local, and non-U.S. income tax examinations by tax authorities for years before 2016. As a result of (i) statute of limitations that will begin to expire within the next 12 months in various jurisdictions, and (ii) possible settlements of audit-related issues with taxing authorities in various jurisdictions, the Company believes that it is reasonably possible that the total amount of its unrecognized income tax liability will decrease between \$10 and \$30 in the next 12 months.

The Company's practice is to recognize interest and/or penalties related to unrecognized tax benefits as part of *Income and mining tax benefit (expense)*. At December 31, 2024 and 2023, the total amount of accrued income-tax-related interest and penalties included in the Consolidated Balance Sheets was \$47 and \$78, respectively. During 2024, 2023, and 2022 the Company released \$31, increased \$1, and released \$61 of interest and penalties, respectively, through the Consolidated Statements of Operations.

Other

No additional income taxes have been provided for any remaining undistributed foreign earnings not subject to the transition tax, or any additional outside basis difference inherent in these entities, as these amounts continue to be indefinitely reinvested in foreign operations.

Employee pension benefits	29	35
Other employee-related payables	85	115
	<u>\$ 555</u>	<u>\$ 655</u>

Pension and Other Benefit Plans

The Company provides a defined benefit pension plan to eligible employees. Benefits are generally based on years of service and the employee's annual compensation. Various international pension plans are based on local laws and requirements. Pension costs are determined annually by independent actuaries and pension contributions to the U.S. qualified plans are made based on funding standards established under the Employee Retirement Income Security Act of 1974, as amended.

The following tables provide a reconciliation of changes in the plans' benefit obligations and assets' fair values for 2024 and 2023:

	Pension Benefits		Other Benefits	
	2024	2023	2024	2023
Change in benefit obligation:				
Benefit obligation at beginning of year	\$ 325	\$ 311	\$ 71	\$ 66

Employee-related benefits, non-current ⁽¹⁾	(32)	(35)	(55)	(65)
Net amounts recognized	<u>\$ —</u>	<u>\$ (3)</u>	<u>\$ (60)</u>	<u>\$ (71)</u>

⁽¹⁾ Includes \$4 of non-current assets and \$3 of non-current liabilities related to the pension plan at Porcupine that were reclassified to *Assets held for sale* and *Liabilities held for sale* as of December 31, 2024.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The Company's qualified pension plan is funded with cash contributions in compliance with Internal Revenue Service rules and regulations. The Company's non-qualified and other benefit plans are currently not funded, but exist as general corporate obligations. The information contained in the above tables presents the combined funded status of qualified and non-qualified plans. The Company reviews its retirement benefit programs on a regular basis and will consider market conditions and the funded status of its qualified pension plans in determining whether additional contributions are appropriate in calendar year 2025.

As of December 31, 2024 and 2023, all pension benefit plans had accumulated benefit obligations and projected benefit obligations in excess of the fair value of assets with the exception of one defined benefit pension plan in the U.S. and one defined benefit pension plan in Canada. The fair value of the plan assets associated with these pension benefit plans was in excess of the related accumulated benefit obligations and projected benefit obligations. The following table provides information for the Company's defined benefit pensions plans that had aggregate accumulated benefit obligations and projected benefit obligations in excess of plan assets at December 31:

	Pension Benefits ⁽¹⁾	
	2024	2023
Projected benefit obligation	\$ 39	\$ 42
Accumulated benefit obligation	\$ 32	\$ 35
Fair value of plan assets	\$ 2	\$ 1

⁽¹⁾ Information for other benefit plans with an accumulated benefit obligations in excess of plan assets has not been included as all of the other benefit plans are unfunded.

The significant assumptions used in measuring the Company's benefit obligation were mortality assumptions and discount rate.

The mortality assumptions used to measure the pension and other post retirement obligation incorporate future mortality improvements from tables published by the Society of Actuaries ("SOA"). In 2024 and 2023, the SOA announced they would not release a new generational projection scale for the related years and instead updated the Mortality Improvement Model ("MIM") tool with the ability to optionally input mortality loads to model differing viewpoints of the ongoing effect of COVID. The Company utilized the Pri-2012 mortality tables and the MP-2021 generational projection scales, with no adjustment for COVID due to the Company not experiencing material mortality gain due to COVID, to measure the pension and other post retirement obligations as of December 31, 2024 and 2023.

Yield curves matching the Company's benefit obligations were derived using a model based on high quality corporate bond data from Bloomberg. The model develops a discount rate by selecting a portfolio of high quality corporate bonds whose projected cash flows match the projected benefit payments of the plan. The resulting curves were used to identify a weighted average discount rate for the Company of 5.77% and 5.33% at December 31, 2024 and 2023, respectively, based on the timing of future benefit payments.

Actuarial (gain) loss of \$(24) and \$21 was recognized in the years ended December 31, 2024 and 2023, respectively, primarily due to a change in discount rate from the prior year.

Settlement accounting is required when annual lump sum payments exceed the annual interest and service costs for a plan and results in a remeasurement of the related pension benefit obligation and plan assets and the recognition of settlement charges in *Other income (loss), net* due to the acceleration of a portion of unrecognized actuarial losses. Lump sum payments are primarily made from the plan assets. Settlement accounting was triggered for the periods ended December 31, 2024, 2023 and 2022 resulting in pension settlement charges of \$1, \$9 and \$137, respectively.

For the period ended December 31, 2022, pension settlement charges primarily resulted from the Company executing an annuitization to transfer a portion of the pension plan obligations from the Company's U.S. qualified defined benefit pension plans to an insurance company using plan assets during the first quarter of 2022. As a result, \$527 of the previously recognized pension obligations were transferred and settlement accounting was triggered which resulted in the recognition of a non-cash settlement loss of \$130 in *Other income (loss), net*. In December 2022, the Company received the final true-up from the insurance company for the annuitization, which had an inconsequential impact on the settlement.

NEWMONT CORPORATION

Total benefit cost (credit) and other comprehensive income (loss)	<u>\$ 6</u>	<u>\$ 16</u>	<u>\$ (21)</u>	<u>\$ (5)</u>	<u>\$ 8</u>	<u>\$ (16)</u>

Actuarial losses in excess of 10 percent of the greater of the projected benefit obligation or market-related value of plan assets are amortized over the expected average remaining future service period of the current active participants.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The significant assumptions used in measuring the Company's Total benefit cost (income) and *Other comprehensive income (loss)* were discount rate and expected return on plan assets:

	Pension Benefits			Other Benefits		
	Year Ended December 31,			Year Ended December 31,		
	2024	2023	2022	2024	2023	2022
Weighted average assumptions used in measuring the net periodic benefit cost:						
Discount rate ⁽¹⁾	5.33 %	5.63 %	4.09 %	6.09 %	6.10 %	3.03 %
Expected return on plan assets	7.09 %	6.38 %	6.75 %	N/A	N/A	N/A

⁽¹⁾ Total benefit cost (income) and other comprehensive income (loss) for the Company's U.S. qualified defined benefit pension plan was remeasured due to the settlement accounting required from the retiree annuity purchase on March 25, 2022. The discount rate used for determining the Total benefit cost (income) and other comprehensive income (loss) reflected 3.03% from January 1, 2022 through March 25, 2022 and 4.09% from March 26, 2022 through December 31, 2022.

The expected long-term return on plan assets used for each period in the three years ended December 31, 2024 was determined based on an analysis of the asset returns over multiple time horizons for the Company's actual plan and for other comparable U.S. corporations. At December 31, 2024, Newmont has estimated the expected long-term return on the qualified pension plan's assets to be 7.20% which will be used in determining future net periodic benefit cost. The Company determines the long-term return on plan assets by considering the most recent capital market forecasts, the plans' current asset allocation and the actual return on plan assets in comparison to the expected return on assets. The average actual return on the qualified pension plan's assets during the 36 years ended December 31, 2024 approximated 7.52%.

Newmont has two pension calculations for salaried U.S. employees. The first is a "Final Average Pay" pension calculation which is defined as a monthly annuity at age 62 based, in part, on their highest five year eligible earnings and years of credited service. The second is the "Stable Value" calculation which is defined as a lump sum payment to employees upon retirement. The amount of the lump sum is the total of annual accruals based on the employee's eligible earnings and years of service. The benefits accrued under the Final Average Pay formula were frozen on June 30, 2014 for those eligible employees. Beginning July 1, 2014, all future accruals are based on the terms and features of the Stable Value calculation.

The assumed health care trend rate used to measure the expected cost of benefits is 6.50% in 2025 and decreases gradually each year to 5.00% in 2031, which is used thereafter.

The qualified pension plan employs an independent investment firm which invests the assets of the plans in certain approved funds that correspond to specific asset classes with associated target allocations. The goal of the pension fund investment program is to achieve prudent actuarial funding ratios while maintaining acceptable risk levels. The investment performance of the plans and that of the individual investment firms is measured against recognized market indices. The performance of the pension funds are monitored by an investment committee comprised of members of the Company's management, which is advised by an independent investment consultant. With the exception of global capital market economic risks, the Company has identified no significant portfolio risks associated to asset classes. The following is a summary of the target asset allocations for 2024 and the actual asset allocation at December 31, 2024:

Asset Allocation	Target	Actual at December 31, 2024
Fixed income investments	45 %	44 %
World equity fund (U.S. and International equity investments)	20 %	20 %
International equity investments	12 %	12 %
U.S. equity investments	11 %	11 %
Real estate	8 %	9 %
High yield fixed income investments	4 %	4 %
Cash equivalents	— %	— %

Cash equivalent instruments are classified within Level 1 of the fair value hierarchy because they are valued using quoted market prices in active markets and are primarily invested in money market securities and U.S. Treasury securities.

Commingled fund investments are managed by several fund managers and are valued at the net asset value per share for each fund. Although the majority of the underlying assets in the funds consist of actively traded equity securities and bonds, the unit of account is considered to be at the fund level. These funds require less than a month's notice for redemptions and can be redeemed at the net asset value per share.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

The following table sets forth the Company's pension plan assets measured at fair value:

	Fair Value at December 31,

Cash Flows

Benefit payments expected to be paid to plan participants are as follows:

	Pension Plan	Other Benefits
2025	\$ 21	\$ 6
2026	\$ 21	\$ 6
2027	\$ 21	\$ 5
2028	\$ 24	\$ 5
2029	\$ 24	\$ 5
Thereafter	\$ 131	\$ 26

Savings Plans

The Company has one qualified defined contribution savings plan in the U.S. that covers salaried and hourly employees. When an employee meets eligibility requirements, the Company matches 100% of employee contributions of up to 6% of eligible earnings. Hourly employees receive an additional retirement contribution to the participant's retirement contribution account equal to an amount which is paid and determined by the Company. Currently, the additional retirement contribution is 5% of eligible earnings. Matching contributions are made in cash. In addition, the Company has one non-qualified supplemental savings plan for executive-level employees whose benefits under the qualified plan are limited by federal regulations.

NOTE 12 STOCK-BASED COMPENSATION

The Company has stock incentive plans for directors, executives and eligible employees. Stock incentive awards include RSUs and PSUs. The Company issues new shares of common stock to satisfy vesting under all of its stock incentive awards. Prior to 2012, the Company also granted options to purchase shares of stock with exercise prices not less than fair market value of the underlying stock at the date of grant. At December 31, 2024, 18,993,357 shares were authorized for future stock incentive plan awards.

Restricted Stock Units

The Company grants RSUs to directors, executives and eligible employees. Awards are determined as a target percentage of base salary and, for eligible employees, are subject to a personal performance factor. For all RSU grants issued prior to February 2018, RSU awards vest on a straight-line basis over periods of three years or more, unless the employee becomes retirement eligible prior to the vesting date. If an employee becomes retirement eligible and retires prior to the vesting date, the remaining awards vest on a pro rata basis at the retirement date. Starting with the February 2018 grant, if the employee becomes retirement eligible at any point during the vesting period, the entire award is considered earned after the later of the one-year service period from the grant date or the retirement eligible date. Prior to vesting, holders of RSUs do not have the right to vote the underlying shares; however, directors, executives and eligible employees accrue dividend equivalents on their RSUs, which are paid at the time the RSUs vest. The accrued dividend equivalents are not paid if RSUs are forfeited. The RSUs are subject to forfeiture risk and other restrictions. Upon vesting, the employee is entitled to receive one share of the Company's common stock for each restricted stock unit.

Performance Stock Units

In 2023 and 2024, the Company amended the PSU plan for eligible executives to incorporate awards that vest based on certain performance-related conditions in addition to the historically granted awards that vest based on certain market-related conditions.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

For market-related conditions, the awards vest after the three-year requisite service period based on the Company's total stockholder return compared to the return of a peer group. The grant date fair value of the awards are amortized on a straight-line basis over the required performance period.

The grant date fair value of the market-related conditions for each PSU granted in 2024, 2023 or 2022 was determined using a Monte Carlo valuation model, which requires the input of the following subjective assumptions:

	Year Ended December 31,		
	2024	2023	2022
Risk-free interest rate	4.40%	4.45%	1.61%
Volatility range	17.50% - 76.70%	34.24% - 81.36%	31.78% - 81.77%
Weighted-average volatility	47.71%	55.24%	54.89%
Expected term (years)	3	3	3
Weighted-average fair market value	\$33.91	\$50.39	\$77.00

The risk-free interest rates are based on a U.S. Treasury yield curve in effect at the time of grant. Expected volatility is based on historical volatility of the Company's stock as well as the stock of the peer group for the three-year performance period.

For performance-related conditions, the awards vest based on the achievement of certain performance metrics which include (i) representation of women on executive team, (ii) Scope 1 and 2 emission reductions related to key milestone projects, and (iii) return on capital employed. The grant date fair value of the awards are amortized over the three-year requisite service period, based on the probability of the performance conditions being met.

The grant date fair value of the performance-related conditions for each PSU granted in 2024 was determined using the Company's stock price on the grant. The weighted-average fair market value for 2024 was \$30.01.

Stock-Based Compensation Activity

A summary of the status and activity of non-vested RSUs and PSUs for the year ended December 31, 2024 is as follows:

	RSU		PSU	
	Number of Units	Weighted Average Grant-Date Fair Value	Number of Units	Weighted Average Grant-Date Fair Value
Non-vested at beginning of year	2,102,567	\$ 48.95	1,193,535	\$ 60.60
Granted	2,509,780	\$ 31.20	878,974	\$ 28.00
Vested	(1,011,308)	\$ 50.60	(173,982)	\$ 65.41
Forfeited	(322,569)	\$ 35.91	(256,814)	\$ 48.22
Non-vested at end of year	<u>3,278,470</u>	<u>\$ 36.13</u>	<u>1,641,713</u>	<u>\$ 44.58</u>

The total intrinsic value and fair value of RSUs that vested in 2024, 2023, and 2022 was \$37, \$36, and \$62, respectively. The total intrinsic value and fair value of PSUs that vested in 2024, 2023, and 2022 was \$6, \$35, and \$47, respectively.

Cash flows resulting from excess tax benefits are classified as part of cash flows from operating activities. Excess tax benefits are realized tax benefits from tax deductions for vested RSUs, settled PSUs, and exercised options in excess of the deferred tax asset attributable to stock compensation costs for such equity awards. The Company recorded \$3 and \$1 in tax deficiencies for the years ended December 31, 2024 and 2023, respectively, and \$5 in excess tax benefits for the year ended December 31, 2022.

At December 31, 2024, there was \$62 and \$38 of unrecognized compensation costs related to the unvested RSUs and PSUs, respectively. This cost is expected to be recognized over a weighted average period of approximately two years.

The Company recognized stock-based compensation as follows:

	Year Ended December 31,		
	2024	2023	2022
Restricted stock units	\$ 63	\$ 52	\$ 49
Performance leveraged stock units	20	24	24
Other ⁽¹⁾	6	4	3
Total stock-based compensation	<u>\$ 89</u>	<u>\$ 80</u>	<u>\$ 76</u>

⁽¹⁾ Other includes the Company's proportionate share of NGM stock compensation.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

NOTE 13 FAIR VALUE ACCOUNTING

Fair value accounting establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are described below:

- Level 1 Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities;
- Level 2 Quoted prices in markets that are not active, quoted prices for similar assets or liabilities in active markets, quoted prices or inputs that are observable, either directly or indirectly, for substantially the full term of the asset or liability and model-based valuation techniques (e.g. the Black-Scholes model) for which all significant inputs are observable in the market or can be corroborated by observable market data for substantially the full term of the assets or liabilities; and
- Level 3 Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (supported by little or no market activity).

The following tables set forth the Company's assets and liabilities measured at fair value on a recurring (at least annually) and nonrecurring basis by level within the fair value hierarchy. As required by accounting guidance, assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement.

	Fair Value at December 31, 2024

- ⁽¹⁾ Cash and cash equivalents at December 31, 2024 and 2023 include term deposits that have an original maturity of three months or less.
- ⁽²⁾ Assets held for sale at December 31, 2024 includes assets held for sale that were written down to their fair value, excluding costs to sell, of \$1,840 at December 31, 2024. The aggregate fair value, excluding costs to sell, of net assets held for sale subject to fair value remeasurement was \$679 at December 31, 2024.
- ⁽³⁾ Consists of the contingent payments received through the Telfer Sale that do not meet the definition of a derivative and are considered to be a financial asset, for which the Company recorded at fair value at completion of the sale on December 4, 2024.
- ⁽⁴⁾ Debt is carried at amortized cost. The outstanding carrying value was \$8,476 and \$8,874 at December 31, 2024 and December 31, 2023, respectively. The fair value measurement of debt was based on an independent third-party pricing source.
- ⁽⁵⁾ Consists of the Greatland Option acquired through the Telfer Sale in the fourth quarter of 2024, refer to Notes 3 and 22 for further information.

The Company's cash and cash equivalents and restricted cash are classified within Level 1 of the fair value hierarchy because they are valued using quoted market prices in active markets and are primarily money market securities and U.S. Treasury securities.

The Company's net trade receivables from provisional metal concentrate sales, which contain an embedded derivative and are subject to final pricing, are valued using quoted market prices based on forward curves for the particular metal. As the contracts themselves are not traded on an exchange, these receivables are classified within Level 2 of the fair value hierarchy.

The Company's assets held for sale consist of the six non-core assets and a development project that met the accounting requirements to be presented as held for sale in the first quarter of 2024. The assets are classified as non-recurring within Level 2 and 3 of the fair value hierarchy. Assets held for sale classified as Level 3 in the fair value hierarchy include those with a definitive sales agreement containing Level 3 components, and those without a definitive sales agreement. All other assets held for sale are classified as Level 2 in the fair value hierarchy. Refer to Note 3 for further information.

The Company's equity method investments consist of the Greatland equity method investment, which was acquired through the Telfer Sale in the fourth quarter of 2024. The Greatland equity method investment is accounted for under the fair value option and is classified as Level 1 within the fair value hierarchy and is valued using published market prices of actively traded securities. Refer to Notes 3 and 15 for further information.

The Company's marketable and other equity securities with readily determinable fair values are valued using quoted market prices in active markets and as such are classified within Level 1 of the fair value hierarchy. The fair value of the marketable equity securities are calculated as the quoted market price of the marketable equity security multiplied by the quantity of shares held by the Company.

The Company's marketable and other equity securities without readily determinable fair values consists of the Company's ownership in warrants in publicly traded companies. Warrants are valued using a Black-Scholes model using quoted market prices in active markets of the underlying securities. As the warrants themselves are not traded on the exchange, these equity securities are classified within Level 2 of the fair value hierarchy.

The Company's restricted marketable debt securities are primarily U.S. government issued bonds and international bonds. The Company's debt securities held at Yanacocha are classified within Level 1 of the fair value hierarchy, using published market prices of actively traded securities. The Company's debt securities held at Corporate and Other are classified within Level 1 and Level 2 of the fair value hierarchy. The Level 1 debt securities are valued using published market prices of actively traded securities and the Level 2 debt securities are valued using pricing models which are based on published market inputs for similar, actively traded securities.

The Company's derivative instruments consist of the Stream Credit Facility Agreement ("SCFA"), the Cadia Power Purchase Agreement ("Cadia PPA"), foreign currency fixed forward contracts, and contingent considerations accounted for as derivatives.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The SCFA and the Cadia PPA were acquired as part of the Newcrest transaction and were not designated for hedge accounting under ASC 815 at December 31, 2023. At January 1, 2024, the Company designated the Cadia PPA for hedge accounting. Additionally, in the second quarter of 2024, the Company sold the SCFA.

The Cadia PPA is accounted for at fair value using probability weighted discounted cash flow models and is classified within Level 3 of the fair value hierarchy. The valuation model requires a variety of inputs including life of mine production profiles, forward power prices, forecasted power generation volume, discount rates, and inflation assumptions. The SCFA was accounted for at fair value using probability weighted discounted cash flow models and is classified within Level 3 of the fair value hierarchy at December 31, 2023. The valuation model required a variety of inputs including long-term metal prices, life of mine production profiles, and discount rates. Refer to Note 14 for further information.

The foreign currency fixed forward contracts are valued using pricing models based on forward curves. The Company's foreign currency fixed forward derivatives trade in liquid markets, and as such, model inputs can generally be verified and do not involve significant management judgment. Such instruments are classified within Level 2 of the fair value hierarchy. Refer to Note 14 for further information.

The contingent consideration assets and liabilities, accounted for as derivatives, are classified within Level 3 of the fair value hierarchy. Changes in the discount rate will result in an inverse impact to the estimated fair value of the contingent consideration assets and liabilities. Refer to Note 14 for further information.

The Company's other assets recognized at fair value consist of the contingent payments acquired through the Telfer Sale in the fourth quarter of 2024. The contingent payments were accounted for at fair value at completion of the sale and are classified as non-recurring within Level 3 of the fair value hierarchy. Valuation models require a variety of inputs, including long-term metal prices, life of mine production profiles, and discount rates. Refer to Note 3 for further information.

The Company's other liabilities recognized at fair value consist of the Greatland Option, which was acquired through the Telfer Sale in the fourth quarter of 2024. The Greatland Option is accounted for under the fair value option and is classified as Level 2 within the fair value hierarchy and is valued using pricing models which are based on published market inputs for similar, actively traded securities. Refer to Notes 3 and 15 for further information.

The following tables set forth a summary of the quantitative and qualitative information related to the significant observable and unobservable inputs used in the calculation of the Company's Level 3 financial assets and liabilities at December 31, 2024 and December 31, 2023:

Description	At December 31, 2024	Valuation technique	Significant input	Range, point estimate or average	Weighted Average Discount Rate
Assets held for sale	\$ 672	Income approach	Various ⁽¹⁾	Various ⁽¹⁾	Various ⁽¹⁾
Derivative assets:					
Hedging instruments ⁽²⁾⁽³⁾	\$ 94	Income approach	Forward power prices	A\$43.00- A\$321.00	6.75%
Contingent consideration assets	\$ 47	Income approach	Discount rate	6.37% - 16.38%	10.67%
Other assets	\$ 61	Income approach	Discount rate	6.60%	6.60%
Derivative liabilities	\$ 5	Income approach	Discount rate	5.22% - 5.95%	5.66%

⁽¹⁾ For assets held for sale for which a binding agreement was reached, the terms of the respective agreements were utilized to estimate the fair value and are considered to be a non-recurring fair value measurement under the income approach. For all other assets held for sale, refer to Note 3 for information on the assumptions and inputs specific to the non-recurring fair value measurement performed.

⁽²⁾ The SCFA and the Cadia PPA, acquired as part of the Newcrest transaction, were not designated in a hedging relationship at December 31, 2023. At January 1, 2024, the Company designated the Cadia PPA for hedge accounting, and as a result is included within Hedging Instruments at December 31, 2024. Additionally, in the second quarter of 2024, the Company sold the SCFA. Refer to Note 14 for further information.

⁽³⁾ Hedging instruments consists of the net position of the Cadia PPA which is comprised of \$1 is in a liability position and the non-current portion of \$95 is in an asset position. The current liability portion is included in Derivative liabilities within the fair value hierarchy table and the non-current asset portion is included in Derivative assets within the fair value hierarchy table.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Derivative Assets, Not Designated for Hedging

Stream Credit Facility Agreement ("SCFA")

The SCFA was a non-revolving credit facility in relation to the Fruta del Norte mine, which is wholly owned and operated by Lundin Gold Inc. ("Lundin Gold") in which the Company holds a 32.0% equity interest (refer to Note 15 for further information). The SCFA was a financial instrument that met the definition of a derivative and was accounted for at fair value using a probability weighted discounted cash flow model, but was not designated for hedge accounting under ASC 815. The fair value of the SCFA was \$276 at December 31, 2023, of which \$113 was recognized in current *Derivative assets* and \$163 was recognized in non-current *Derivative assets* in the Company's Consolidated Balance Sheets.

In the second quarter of 2024, the Company completed the sale of the SCFA and Offtake agreement in which Lundin Gold repurchased the SCFA and settled the rights under the Offtake agreement for cash consideration of \$330, of which \$180 and \$150 were received in June 2024 and September 2024, respectively. Refer to Note 15 for further information on the Offtake agreement. The sale resulted in a gain of \$49 recognized in *Other income (loss), net*.

Hedging Instruments

Hedging instruments consisted of the foreign currency cash flow hedges and the Cadia PPA at December 31, 2024.

To minimize credit risk, the Company only enters into transactions with counterparties that meet certain credit requirements and periodically reviews the creditworthiness of these counterparties. The Company believes that the risk of counterparty default is low and its exposure to credit risk is minimal.

Foreign currency cash flow hedges

In June 2024, the Company initiated hedge programs utilizing foreign currency fixed forward contracts to mitigate variability in the USD functional cash flows, to be incurred between October 2024 and December 2025, related to (i) the AUD-denominated capital expenditures incurred during the construction and development phase of the Tanami Expansion 2, Cadia Panel Caves, and the Cadia Tailings Project; (ii) the AUD-denominated operating expenditures at the Boddington, Tanami, and Cadia operating mines located in Australia; and (iii) the CAD-denominated operating expenditures at the Brucejack and Red Chris operating mines located in Canada. The capital expenditures hedged for the Tanami Expansion 2 project under these fixed forward contracts will be for spend not covered by the hedges entered into in October 2022, as described below. The fixed forward contracts were transacted for risk management purposes and designated as foreign currency cash flow hedges. At December 31, 2024, the Company entered into A\$1,126, A\$2,232, and C\$602 relating to the AUD-denominated capital expenditure program, the AUD-denominated operating expenditure program, and the CAD-denominated operating expenditure program respectively. Subsequent to December 31, 2024 and prior to filing, the Company entered into an additional A\$80, A\$354, and C\$82 relating to the programs, respectively.

In May 2023, the Company entered into C\$348 of CAD-denominated and A\$648 of AUD-denominated fixed forward contracts to mitigate variability in the USD functional cash flows related to the CAD-denominated and AUD-denominated operating expenditures incurred between June and December 2023 included in the Company's operating mines located in Canada and Australia, respectively. The fixed forward contracts were transacted for risk management purposes and designated as foreign currency cash flow hedges. As of December 31, 2023, the hedge programs were matured and no related amounts remain in *Accumulated other comprehensive income (loss)*.

In October 2022, the Company entered into A\$574 of AUD-denominated fixed forward contracts to mitigate variability in the USD functional cash flows related to the AUD-denominated capital expenditures expected to be incurred in 2023 and 2024 during the construction and development phase of the Tanami Expansion 2 project included in the Company's Tanami segment. The fixed forward contracts were transacted for risk management purposes. The Company has designated the fixed forward contracts as foreign currency cash flow hedges against the forecasted AUD-denominated Tanami Expansion 2 capital expenditures. As of December 31, 2024, the hedge program matured and a gain of \$7 remains in *Accumulated other comprehensive income (loss)*.

The unrealized changes in fair value have been recorded in *Accumulated other comprehensive income (loss)* and are reclassified to income during the period in which the hedged transaction affects earnings and is presented in the same income statement line item as the earnings effect of the hedged item. If the underlying hedge transaction becomes probable of not occurring, the related amounts will be reclassified to earnings immediately. For the foreign currency cash flow hedges related to capital expenditures, amounts recorded in *Accumulated other comprehensive income (loss)* are reclassified to earnings through *Depreciation and amortization* after the project reaches commercial production. For the foreign currency cash flow hedges related to operating expenditures, amounts recorded in *Accumulated other comprehensive income (loss)* are reclassified to earnings through *Costs applicable to sales* in the month that the operating expenditures are incurred.

Cadia Power Purchase Agreement ("Cadia PPA")

The Cadia PPA is a 15-year renewable power purchase agreement acquired by the Company through the Newcrest transaction. The Cadia PPA will provide the Company with access to large scale generation certificates which the Company intends to

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

surrender to achieve a reduction in its greenhouse gas emissions. The Cadia PPA is a financial instrument that meets the definition of a derivative under ASC 815 and is accounted for at fair value using a probability weighted discounted cash flow model. At January 1, 2024, the Company designated the Cadia PPA in a cash flow hedging relationship to mitigate the variability in cash flows related to approximately 40 percent of forecasted purchases of power at the Cadia mine for a 15 year period from the Cadia PPA's commercial operations date in the third quarter of 2024.

The unrealized changes in fair value have been recorded in *Accumulated other comprehensive income (loss)* and will be reclassified to income during the period in which the hedged transaction affects earnings and is presented in the same income statement line item as the earnings effect of the hedged item. If the underlying hedge transaction becomes probable of not occurring, the related amounts in *Accumulated other comprehensive income (loss)* will be reclassified to earnings immediately. For the Cadia PPA cash flow hedge, amounts recorded in *Accumulated other comprehensive income (loss)* will be reclassified to earnings through *Costs applicable to sales* each period in which electricity is purchased beginning the commercial operations date.

The following table provides the fair value of the Company's derivative instruments designated as cash flow hedges:

	At December 31,	
	2024	2023
Hedging instrument assets:		
Cadia PPA cash flow hedge, non-current ⁽¹⁾⁽²⁾	\$ 95	\$ —
Foreign currency cash flow hedges, current ⁽³⁾	—	7
	<u>\$ 95</u>	<u>\$ 7</u>
Hedging instrument liabilities:		
Foreign currency cash flow hedges, current ⁽⁴⁾	\$ 135	\$ —
Cadia PPA cash flow hedge, current ⁽²⁾⁽⁴⁾	1	—
	<u>\$ 136</u>	<u>\$ —</u>

⁽¹⁾ Included in non-current *Derivative assets* in the Company's Consolidated Balance Sheets.

⁽²⁾ At January 1, 2024, the Company designated the Cadia PPA for hedge accounting. As a result, the Cadia PPA is captured in Derivative instruments, not designated for hedging at December 31, 2023. See above for further information.

⁽³⁾ Included in *Derivative assets* in the Company's Consolidated Balance Sheets.

⁽⁴⁾ Included in *Other current liabilities* in the Company's Consolidated Balance Sheets.

The following table provides the losses (gains) recognized in earnings related to the Company's derivative instruments designated for hedging:

	Year Ended December 31,		
	2024	2023	2022
Loss (gain) on cash flow hedges:			
Interest rate contracts ⁽¹⁾	\$ 10	\$ 5	\$ 6
Foreign currency cash flow hedges ⁽²⁾	7	19	—
Cadia PPA cash flow hedge ⁽³⁾	5	—	—
	<u>\$ 22</u>	<u>\$ 24</u>	<u>\$ 6</u>

⁽¹⁾ Interest rate contracts relate to swaps entered into, and subsequently settled, associated with the issuance of the 2022 Senior Notes, 2035 Senior Notes, 2039 Senior Notes, and 2042 Senior Notes. The related gains and losses are reclassified from *Accumulated other comprehensive income (loss)* and amortized to *Interest expense, net of capitalized interest* over the term of the respective hedged notes. During the year ended December 31, 2024, \$6 was reclassified to *Other income (loss), net* as a result of the redemption and tender offers of the 2042 Senior Notes. Refer to Note 20 for additional information.

⁽²⁾ As of December 31, 2024, approximately \$95 is expected to be reclassified out of *Accumulated other comprehensive income (loss)* into earnings over the next 12 months.

⁽³⁾ As of December 31, 2024, approximately \$10 is expected to be reclassified out of *Accumulated other comprehensive income (loss)* into earnings over the next 12 months.

Contingent Consideration Assets and Liabilities

Contingent consideration assets and liabilities are comprised of contingent consideration to be received or paid by the Company in conjunction with various sales of assets and investments with future payment contingent upon meeting certain milestones. These contingent consideration assets and liabilities are accounted for at fair value and consist of financial instruments that meet the definition of a derivative, but are not designated for hedge accounting under ASC 815. Refer to Note 13 for further information regarding the fair value of the contingent consideration assets and liabilities.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

The Company had the following contingent consideration assets and liabilities at December 31, 2024 and 2023:

	At December 31,	
	2024	2023
Contingent Consideration Assets:		
Red Lake ⁽¹⁾	\$ 36	\$ 39
Batu Hijau and Elang ⁽²⁾	—	161
Other ⁽¹⁾	11	11
	<u>\$ 47</u>	<u>\$ 211</u>
Contingent Consideration Liabilities: ⁽³⁾	<u>\$ 7</u>	<u>\$ 8</u>

⁽¹⁾ Included in non-current *Derivative assets*.

⁽²⁾ The Batu Hijau and Elang contingent consideration assets were sold in the third quarter of 2024. Refer below for further information. At December 31, 2023, \$76 is included in current *Derivative assets* and \$85 is included in non-current *Derivative assets*.

⁽³⁾ At December 31, 2024, \$2 and \$5 is included in *Other current liabilities* and *Other non-current liabilities*, respectively. At December 31, 2023, \$3 and \$5 is included in *Other current liabilities* and *Other non-current liabilities*, respectively.

Batu Hijau and Elang Contingent Consideration Assets

The Batu Hijau and Elang contingent consideration assets relate to the sale of PT Newmont Nusa Tenggara in 2016. In the third quarter of 2024, the Company completed the sale of the Batu and Elang contingent consideration assets for cash consideration of \$153. As a result of the sale, the Company recognized a tax benefit of \$37 due to the release of the valuation allowance and a gain of \$15, partially offset by a related tax impact of \$3, recognized in *Net income (loss) from discontinued operations*.

NOTE 15 INVESTMENTS

	At December 31,

Equity method investments (% ownership):		
Pueblo Viejo Mine (40.0%)	1,516	1,489
NuevaUnión Project (50.0%)	961	959
Lundin Gold Inc. (32.0%)	941	938
Norte Abierto Project (50.0%)	532	528
Greatland (20.4%) ⁽²⁾	212	—
	<u>4,162</u>	<u>3,914</u>
	<u>\$ 4,471</u>	<u>\$ 4,143</u>
Non-current restricted investments: ⁽³⁾		
Marketable debt securities	<u>\$ 15</u>	<u>\$ 21</u>

⁽¹⁾ Includes \$25 accounted for under the measurement alternative.

⁽²⁾ Acquired through the Telfer Sale in the fourth quarter of 2024 and accounted for under the fair value option, refer to Note 3 for further information.

⁽³⁾ Non-current restricted investments are legally pledged for purposes of settling reclamation and remediation obligations and are included in *Other non-current assets*. For further information regarding these amounts, refer to Note 6.

Equity Method Investments

Income (loss) from the Company's equity method investments is recognized in *Equity income (loss) of affiliates*, which primarily consists of income from Pueblo Viejo and Lundin Gold. Income (loss) from Pueblo Viejo consisted of \$91, \$63, and \$102 for the years ended December 31, 2024, 2023, and 2022.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

On November 6, 2023, as a part of the Newcrest transaction, the Company acquired 32.0% interest in Lundin Gold. The Company accounts for Lundin as an equity method investment on a quarter lag. Income (loss) from Lundin Gold consisted of \$45 for the year ended December 31, 2024.

See below for further information on the Company's equity method investments.

Pueblo Viejo

The Pueblo Viejo mine is located in the Dominican Republic and commenced operations in September 2014. Barrick Gold Corporation ("Barrick") operates and holds the remaining interest in the mine. At acquisition, the fair value of Newmont's equity investment in Pueblo Viejo was lower than the underlying net assets of its investment resulting in a basis difference, which is being amortized into *Equity income (loss) of affiliates* over the remaining estimated useful life of the mine. As of December 31, 2024 the net basis difference was \$295.

In September 2019, the Company and Barrick entered into a \$70 revolving loan facility ("Revolving Facility") to provide short-term financing to Pueblo Viejo. The Company funded 40% of the borrowings based on its ownership interest in Pueblo Viejo. The Revolving Facility matured on December 31, 2024 and as such, there were no borrowings outstanding as of December 31, 2024. No borrowings were outstanding as of December 31, 2023.

In November 2020, the Company and Barrick entered into an agreement with Pueblo Viejo to provide funding of up to \$1,300 (\$520 attributable to Newmont's 40% ownership interest) through a loan facility for the expansion of Pueblo Viejo's operations ("Loan Facility"). Under the terms of the agreement, the Company and Barrick distributed funds based on their respective proportionate ownership interest in Pueblo Viejo. The Loan Facility bears interest at 95% of the 6-month SOFR plus 4.25% which is compounded semi-annually in arrears on February 28 and August 31 of each year. The Loan Facility was provided in two tranches of \$800 and \$500, respectively. Unused proceeds under the first tranche are available for use under the second tranche. The tranches mature February 28, 2032 and February 28, 2035, respectively.

In October 2024, the Company and Barrick entered into an agreement with Pueblo Viejo to provide additional funding of up to \$800 (\$320 attributable to Newmont's 40% ownership interest) through an additional loan facility to complete the expansion of Pueblo Viejo's operations ("Loan Facility II"). Under the terms of the agreement, the Company and Barrick will distribute funds based on their respective proportionate ownership interest in Pueblo Viejo. The Loan Facility II bears interest at the 6-month SOFR plus 3.81% which is compounded semi-annually in arrears on February 15 and August 15 of each year. The Loan Facility II matures February 15, 2039.

As of December 31, 2024 and December 31, 2023, the Company had outstanding stockholder loans to Pueblo Viejo of \$486 and \$429, which includes accrued interest of \$19 and \$14, respectively. All loans receivable and accrued interest are included in the Pueblo Viejo equity method investment balance.

The Company purchases its portion (40.0%) of gold and silver produced from Pueblo Viejo at market price and resells those ounces to third parties. Total payments made to Pueblo Viejo for gold and silver purchased were \$580 and \$448 for the years ended December 31, 2024 and December 31, 2023, respectively. These purchases, net of subsequent sales, were included in *Other income (loss), net* and the net amount is immaterial. There were no amounts due to or due from Pueblo Viejo for gold and silver purchases as of December 31, 2024 or December 31, 2023.

NuevaUnión

The NuevaUnión project is located in Chile and is currently in the Company's development project pipeline. The project is jointly managed by Newmont and Teck Resources Limited, who holds the remaining 50% interest. At acquisition, the carrying value of Newmont's equity investment in NuevaUnión was lower than the underlying net assets of its investment resulting in a basis difference. This basis difference will be amortized into *Equity income (loss) of affiliates* over the remaining estimated useful life of the mine beginning when commercial production is declared, which had not yet occurred as of December 31, 2024.

At December 31, 2024 the carrying value of Newmont's equity investment in NuevaUnión was lower than the underlying net assets of its investment by \$67. This basis difference will be amortized into *Equity income (loss) of affiliates* over the remaining estimated useful life of the mine beginning when commercial production is declared, which had not yet occurred as of December 31, 2024.

Lundin Gold Inc.

Lundin Gold is a Canadian based mine development and operating company which wholly owns and operates the Fruta del Norte gold mine in Ecuador. On November 6, 2023, as a part of the Newcrest transaction, the Company acquired 32.0% interest in Lundin Gold. The Company accounts for Lundin as an equity method investment on a quarter lag. At acquisition, the fair value of Newmont's equity investment in Lundin Gold was higher than the underlying net assets of its investment resulting in a basis difference. This basis difference is being amortized into *Equity income (loss) of affiliates* over the remaining estimated useful life of the mine. As of December 31, 2024 the net basis difference was \$588.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

The Company had the right to purchase 50% of gold produced from Lundin Gold at a price determined based on delivery dates and a defined quotational period and resold the ounces purchased to third parties under an offtake agreement acquired through the Newcrest transaction (the "Offtake agreement"). In the second quarter of 2024, the Company completed the sale of the SCFA and Offtake agreement in which Lundin Gold repurchased the SCFA and settled the rights under the Offtake agreement. Refer to Note 14 for further information.

Total payments made to Lundin Gold under the Offtake agreement for gold purchased were \$189 and \$30 for the years ended December 31, 2024 and December 31, 2023, respectively. These purchases, net of subsequent sales, were included in *Other income (loss), net* and the net amount is immaterial. There was \$— and \$13 payable due to Lundin Gold for gold purchases as of December 31, 2024 and December 31, 2023, respectively. At December 31, 2024, the calculated fair value, based on quoted closing prices of publicly traded shares, of the Company's investment in Lundin Gold was \$1,638.

Norte Abierto

The Norte Abierto project is located in Chile and is currently in the Company's development project pipeline. The project is jointly managed by Newmont and Barrick, who holds the remaining 50.0% interest. Prior to December 2023, Newmont owed deferred payments to Barrick to be satisfied through funding a portion of Barrick's share of Norte Abierto project expenditures.

In December 2023, the Company entered into an agreement with Barrick and subsequently settled the deferred payments. Immediately prior to settlement, there were \$23 and \$73 related to these deferred payments included in *Other current liabilities* and *Other non-current liabilities* on the Consolidated Balance Sheet, respectively. Per the terms of the agreement, the settlement occurred through a cash payment of approximately \$60 and funding of prefeasibility study costs for the Norte Abierto project. The Company has agreed to fund both its and Barrick's portions of prefeasibility study costs, up to a total of \$60, to occur in the near future. If prefeasibility costs exceed the agreed upon \$60, the costs will be paid proportionately by the Company and Barrick. The \$30 related to the prefeasibility study costs associated with Barrick's portion will be satisfied as funding occurs. At December 31, 2024 and 2023, \$20 and \$20 is recognized within *Other current liabilities*, respectively, and \$3 and \$10 within *Other non-current liabilities*, respectively.

At December 31, 2024 the carrying value of Newmont's equity investment in Norte Abierto was lower than the underlying net assets of its investment by \$209. This basis difference will be amortized into *Equity income (loss) of affiliates* over the remaining estimated useful life of the mine beginning when commercial production is declared, which had not yet occurred as of December 31, 2024.

Greatland

Greatland Gold plc ("Greatland") is an Australian based mine development and exploration company which acquired the Company's assets held in the Telfer reportable segment in December 2024. Refer to Note 3 for further information on the Telfer Sale. Pursuant to the terms of the sale, the Company acquired a 20.4% interest in Greatland resulting in 2.7 billion shares. The Company accounts for its investment in Greatland as an equity method investment, included in *Investments*, for which the Company elected the fair value option as it believes it best reflects the economics of the underlying transaction.

The equity held in Greatland contains an option in which a third party has the ability to acquire 1.3 billion of the Company's Greatland shares at a set price exercisable for four years (the "Greatland Option"). The Greatland Option does not meet the definition of a derivative and is considered to be a financial liability, for which the Company has elected the fair value option. The Company believes the fair value option best reflects the economics of the underlying transaction. The Greatland Option is included in *Other non-current liabilities* at a fair value of \$51 at December 31, 2024.

Under the fair value option, changes in the fair value of the instrument are recognized through earnings each reporting period in *Other income (loss), net*. For the year ended December 31, 2024, a loss of \$29 and a gain of \$16 were recognized in *Other income (loss), net* related to the Greatland equity method investment and Greatland Option, respectively.

NOTE 16 INVENTORIES

	At December 31,	
	2024	2023
Materials and supplies	\$ 1,081	\$ 1,247

⁽¹⁾ During the first quarter of 2024, certain non-core assets were determined to meet the criteria for held for sale. As a result, at December 31, 2024 the related assets, including \$1,885 of mineral interests included in *Property, plant and mine development*, were reclassified to *Assets held for sale*. Refer to Note 3 for additional information.

⁽²⁾ These amounts are currently non-depreciable as these mineral interests have not reached production stage.

NOTE 19 GOODWILL

Changes in the carrying amount of goodwill by reportable segment were as follows:

	Balance at December 31, 2022	Impairment ⁽¹⁾	Acquisitions ⁽²⁾	Balance at December 31, 2023	Acquisitions ⁽²⁾	Balance at December 31, 2024
Musselwhite	\$ 293	\$ (293)	\$ —	\$ —	\$ —	\$ —
Éléonore	246	(246)	—	—	—	—
Brucejack	—	—	1,087	1,087	(418)	669
Red Chris	—	—	397	397	142	539
Peñasquito ⁽³⁾	1,164	(1,210)	—	—	—	—
Cadia	—	—	565	565	(316)	249
Lihir	—	—	695	695	249	944
NGM	268	(11)	—	257	—	257
	<u>\$ 1,971</u>	<u>\$ (1,760)</u>	<u>\$ 2,744</u>	<u>\$ 3,001</u>	<u>\$ (343)</u>	<u>\$ 2,658</u>

⁽¹⁾ Accumulated impairment of \$2,560 consists of impairment charges incurred in 2022 and 2023 of \$800, and \$1,760 respectively.

⁽²⁾ Amounts relate to goodwill recognized through the Newcrest transaction on November 6, 2023. During 2024, goodwill was subject to measurement period adjustments to the purchase price allocation. Refer to Note 3 for further information.

⁽³⁾ For the year ended December 31, 2023, the Company recognized a prior period adjustment of \$46 to goodwill and deferred tax liability for Peñasquito relating to a prior acquisition. This adjustment resulted in an increase to goodwill, which was fully offset by the impairment charge incurred in 2023.

⁽¹⁾ The estimated fair value of the Senior Notes was determined by an independent third-party pricing source and may or may not reflect the actual trading value of this debt. Carrying value of the bilateral bank facilities approximates fair value.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

- (2) Interest rates on the bilateral bank facilities are variable. Refer to "Corporate Revolving Credit Facilities and Letters of Credit Facilities" below for further information.
- (3) The Company fully redeemed all of the outstanding 2026 Senior Notes in February 2025. Refer below for further information.

All outstanding Senior Notes are unsecured and rank equally with one another.

Maturities for the next five years, and thereafter, are as follows:

Year Ending December 31,	
2025 ⁽¹⁾	\$ 928
2026	—
2027	—
2028	—
2029	638
Thereafter	7,225
Total face value of debt	8,791
Unamortized premiums, discounts, and issuance costs	(315)
Debt	<u>\$ 8,476</u>

- (1) The Company fully redeemed all of the outstanding 2026 Senior Notes in February 2025. Refer below for further information.

Corporate Revolving Credit Facilities and Letters of Credit Facilities

In connection with the Newcrest transaction on November 6, 2023, the Company acquired bilateral bank debt facilities held with 13 banks. The bilateral bank debt facilities had a total borrowing capacity of \$2,000, of which \$1,923 was outstanding at December 31, 2023, and \$462 due February 7, 2024, \$769 due March 1, 2024, and \$692 due March 1, 2026. On February 7, 2024, the Company repaid \$462 of the amount outstanding.

On February 15, 2024, the Company completed an amendment and restatement of its existing \$3,000 revolving credit agreement dated as of April 4, 2019 (the "Existing Credit Agreement"). The Existing Credit Agreement was entered into with a syndicate of financial institutions and provided for borrowings in U.S. dollars and contained a letter of credit sub-facility. Per the amendment, the expiration date of the credit facility was extended from March 30, 2026 to February 15, 2029 and the borrowing capacity was increased to \$4,000. Interest is based on Term SOFR plus a credit spread adjustment and margin. Facility fees vary based on the credit ratings of the Company's senior, uncollateralized, non-current debt. Debt covenants under the amendment are substantially the same as the Existing Credit Agreement.

On February 20, 2024, the Company completed a drawdown on the \$4,000 revolving credit agreement and used the proceeds to repay the remaining \$1,461 owed on the remaining bilateral bank debt facilities.

At December 31, 2024, the Company had no borrowings outstanding under the facility. There were no amounts outstanding on the letters of credit sub-facility at December 31, 2024 and 2023, respectively.

At December 31, 2024 and 2023 the Company had letters of credit outstanding in the amounts of \$1,034 and \$1,158, respectively, of which \$900 and \$1,015 represented guarantees for reclamation obligations, respectively. None of these letters of credit have been drawn on for reclamation obligations as of December 31, 2024 and 2023.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

Debt Extinguishment

In 2024, the Company partially redeemed certain Senior Notes resulting in a gain on extinguishment of \$38 recognized in *Other income (loss), net* for the year ended December 31, 2024. The gain includes the write-off of unamortized premiums, discounts, and issuance costs of \$8 related to the partially redeemed Senior Notes. The following table summarizes the partial redemptions:

	Settled Notional Amount	Total Repurchase Amount ⁽¹⁾
\$1,000 5.30% Senior Notes due March 2026	\$ 72	\$ 74
\$700 2.80% Senior Notes due October 2029	62	58
\$650 3.25% Senior Notes due May 2030	17	16
\$1,000 2.25% Senior Notes due October 2030	120	107
\$1,000 2.60% Senior Notes due July 2032	174	150
\$1,000 4.875% Senior Notes due March 2042 ⁽²⁾	38	36
	<u>\$ 483</u>	<u>\$ 441</u>

⁽¹⁾ Includes \$4 of accrued interest.

⁽²⁾ As a result of the partial redemption, the Company accelerated a loss of \$6 from *Accumulated other comprehensive income (loss)* to *Other income (loss), net* for the year ended December 31, 2024 related to previously terminated interest rate swaps.

2026 and 2034 Senior Notes

On March 7, 2024, the Company issued \$2,000 unsecured Senior Notes comprised of \$1,000 due March 15, 2026 ("2026 Senior Notes") and \$1,000 due March 15, 2034 ("2034 Senior Notes"). Net proceeds from the 2026 and 2034 Senior Notes were \$1,980. Interest will be paid semi-annually at a rate of 5.30% and 5.35% per annum for the 2026 and the 2034 Senior Notes, respectively. The proceeds from this issuance were used to repay the drawdown on the revolving credit facility resulting in no amounts outstanding on the revolving credit facility as of December 31, 2024.

In February 2025, the Company fully redeemed all of the outstanding 2026 Senior Notes for a redemption price of \$957. The redemption price equaled the principal amount of the outstanding 2026 Senior Notes of \$928 plus accrued and unpaid interest of \$19 in accordance with the terms of the 2026 Notes, and a make-whole provision of \$10.

May 2030 Senior Notes, November 2041 Senior Notes, and May 2050 Senior Notes

Subsequent to implementation of the Newcrest transaction, the Company completed a like-for-like exchange for any and all of the outstanding notes issued by Newcrest Finance Pty Ltd, a wholly owned subsidiary of Newmont ("Newcrest Finance"), with an aggregate principal amount of \$1,650, for new notes issued by Newmont and Newcrest Finance and nominal cash consideration. The new notes, issued December 26, 2023, and the existing Newcrest notes that were not tendered for exchange, consist of \$625 and \$25 of 3.25% notes due May 13, 2030 (the "May 2030 Senior Notes" and the "2030 Newcrest Senior Notes", respectively), \$460 and \$40 of 5.75% notes due November 15, 2041 (the "November 2041 Senior Notes" and the "2041 Newcrest Senior Notes", respectively), and \$486 and \$14 of 4.20% notes due May 13, 2050, respectively (the "May 2050 Senior Notes" and the "2050 Newcrest Senior Notes", respectively).

Debt Covenants

The Company's senior notes and revolving credit facility contain various covenants and default provisions including payment defaults, limitation on liens, leases, sales and leaseback agreements and merger restrictions. Furthermore, the Company's senior notes and corporate revolving credit facility contain covenants that include, limiting the sale of all or substantially all of the Company's assets, certain change of control provisions and a negative pledge on certain assets.

The corporate revolving credit facility contains a financial ratio covenant requiring the Company to maintain a net debt (total debt net of cash and cash equivalents) to total capitalization ratio of less than or equal to 62.50% in addition to the covenants noted above.

At December 31, 2024, the Company was in compliance with all existing debt covenants and provisions related to potential defaults, other than the bilateral facilities which have been repaid as of the date of this report.

NOTE 21 LEASE AND OTHER FINANCING OBLIGATIONS

The Company primarily has operating and finance leases for corporate and regional offices, mining equipment, power generation, and transportation. These leases have a remaining lease term of less than 1 year to 33 years, some of which may include options to extend the lease for up to 15 years, and some of which may include options to terminate the lease within 1 year. Some of the Company's leases include payments that vary based on the Company's level of usage and operations. These variable payments are

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

not included within right-of-use ("ROU") assets and lease liabilities in the Consolidated Balance Sheets. Additionally, short-term leases, which have an initial term of 12 months or less, are not recorded in the Consolidated Balance Sheets.

Total lease cost includes the following components:

	Year Ended December 31,	
	2024	2023
Operating lease cost	\$ 27	\$ 23
Finance lease cost:		
Amortization of ROU assets	91	78
Interest on lease liabilities	35	32
	126	110
Variable lease cost	509	298
Short-term lease cost	76	24
	<u>\$ 738</u>	<u>\$ 455</u>

Supplemental cash flow information related to leases includes the following:

	Year Ended December 31,	
	2024	2023
Cash paid for amounts included in the measurement of lease liabilities:		
Operating cash flows relating to operating leases	\$ 20	\$ 23
Operating cash flows relating to finance leases	\$ 34	\$ 33
Financing cash flows relating to finance leases	\$ 87	\$ 67
Non-cash lease obligations arising from obtaining ROU assets: ⁽¹⁾		
Operating leases	\$ 10	\$ 23
Finance leases	\$ 59	\$ 53

⁽¹⁾ For the year ended December 31, 2023, operating and finance lease obligations assumed in relation to the Newcrest transaction were \$13 and \$51, respectively.

Information related to lease terms and discount rates is as follows:

	Operating Leases	Finance Leases
Weighted average remaining lease term (years)	8	8
Weighted average discount rate	4.35 %	6.36 %

Future minimum lease payments under non-cancellable leases as of December 31, 2024, were as follows:

	Operating Leases⁽¹⁾	Finance Leases
2025	\$ 20	\$ 116
2026	14	96
2027	13	77
2028	11	71
2029	10	46
Thereafter	31	252
Total future minimum lease payments	99	658
Less: Imputed interest	(12)	(162)
Total	<u>\$ 87</u>	<u>\$ 496</u>

⁽¹⁾ The current and non-current portion of operating lease liabilities are included in *Other current liabilities* and *Other non-current liabilities*, respectively, on the Consolidated Balance Sheets.

As of December 31, 2024, the Company has additional leases that have not yet commenced. At commencement, the Company anticipates that these leases will result in additional ROU assets and lease liabilities of \$3. The leases are anticipated to commence in 2025 with a lease term of approximately 2 years.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

NOTE 22 OTHER LIABILITIES

	At December 31,	
	2024	2023
Other current liabilities:		
Reclamation and remediation liabilities	\$ 991	\$ 619
Accrued operating costs ⁽¹⁾	468	473
Accrued capital expenditures	208	320
Accrued royalties	165	137
Hedging instruments ⁽²⁾	136	—
Payables to NGM ⁽³⁾	115	91
Silver streaming agreement	76	87
Stamp duty on Newcrest transaction ⁽⁴⁾	29	316
Other ⁽⁵⁾	293	319
	<u>\$ 2,481</u>	<u>\$ 2,362</u>
Other non-current liabilities:		
Income and mining taxes ⁽⁶⁾	\$ 125	\$ 177
Greatland Option ⁽⁷⁾	51	—
Other ⁽⁸⁾	112	139
	<u>\$ 288</u>	<u>\$ 316</u>

- ⁽¹⁾ Includes an estimated compensation payment to the Worsley JV related to the waiver of certain rights within the cross-operation agreement that confers priority to the bauxite operations at the Boddington mine.
- ⁽²⁾ Refer to Note 14 for additional information.
- ⁽³⁾ Payables to NGM at December 31, 2024 and December 31, 2023 consist of amounts due to (from) NGM representing Barrick's 61.5% proportionate share of the amount owed to NGM for gold and silver purchased by Newmont. Newmont's 38.5% share of such amounts is eliminated upon proportionate consolidation of its interest in NGM. Receivables for Newmont's 38.5% proportionate share related to NGM's activities with Barrick are presented within *Other current assets*.
- ⁽⁴⁾ Incurred as a result of the Newcrest transaction. Refer to Note 8 for further information. Payment of \$291 occurred in the first quarter of 2024.
- ⁽⁵⁾ Primarily consists of accrued interest on debt and taxes other than income and mining taxes.
- ⁽⁶⁾ Primarily consists of unrecognized tax benefits, including penalties and interest.
- ⁽⁷⁾ Acquired through the Telfer Sale in the fourth quarter of 2024 and accounted for under the fair value option. Refer to Notes 3 and 15 for further information.
- ⁽⁸⁾ Primarily consists of the non-current portion of operating lease liabilities.

NOTE 23 ACCUMULATED OTHER COMPREHENSIVE INCOME (LOSS)

NOTE 24 NET CHANGE IN OPERATING ASSETS AND LIABILITIES

Net cash provided by (used in) operating activities of continuing operations attributable to the net change in operating assets and liabilities is composed of the following:

	Year Ended December 31,		
	2024 ⁽¹⁾	2023	2022
Decrease (increase) in operating assets:			
Trade and other receivables	\$ (441)	\$ (240)	\$ 5
Inventories, stockpiles and ore on leach pads	(534)	(187)	(161)
Other assets	64	50	(84)
Increase (decrease) in operating liabilities:			
Accounts payable	(2)	(42)	102
Reclamation and remediation liabilities	(433)	(275)	(247)
Accrued tax liabilities	235	(197)	(343)
Other accrued liabilities ⁽²⁾	86	378	(113)
	\$ (1,025)	\$ (513)	\$ (841)

⁽¹⁾ During the first quarter of 2024, certain non-core assets were determined to meet the criteria for assets held for sale. As a result, the related assets and liabilities were reclassified to *Assets held for sale* and *Liabilities held for sale*, respectively. Amounts herein reflect the net change in the related operating assets and liabilities prior to being reclassified as held for sale. Refer to Note 3 for additional information.

⁽²⁾ Primarily consists of payment of \$291 made in the first quarter of 2024 for stamp duty tax largely accrued in the fourth quarter of 2023 in connection with the Newcrest transaction.

NOTE 25 COMMITMENTS AND CONTINGENCIES

General

Estimated losses from contingencies are accrued by a charge to income when information available prior to issuance of the financial statements indicates that it is probable that a liability could be incurred and the amount of the loss can be reasonably estimated. Legal expenses associated with the contingency are expensed as incurred. If a loss contingency is not probable or

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in millions, except per share, per ounce and per pound amounts)

reasonably estimable, disclosure of the contingency and estimated range of loss, if determinable, is made in the financial statements when it is at least reasonably possible that a material loss could be incurred.

Operating Segments

The Company's operating and reportable segments are identified in Note 4. Except as noted in this paragraph, all of the Company's commitments and contingencies specifically described herein are included in the non-operating segment Corporate and Other. The Yanacocha matters relate to the Yanacocha reportable segment. The CC&V matter relates to the CC&V reportable segment. The Goldcorp Canada matters relates to the Porcupine reportable segment. The Cadia matter relates to the Cadia reportable segment. The Newmont Ghana Gold and Newmont Golden Ridge matters relate to the Ahafo and Akyem reportable segments, respectively.

Environmental Matters

Refer to Note 6 for further information regarding reclamation and remediation. Details about certain significant matters are discussed below.

Minera Yanacocha S.R.L. - 100% Newmont Owned

In early 2015 and again in June 2017, the Peruvian government agency responsible for certain environmental regulations, MINAM, issued proposed modifications to water quality criteria for designated beneficial uses which apply to mining companies, including Yanacocha. These criteria modified the in-stream water quality criteria pursuant to which Yanacocha has been designing water treatment processes and infrastructure. In December 2015, MINAM issued the final regulation that modified the water quality standards. These Peruvian regulations allow time to formulate a compliance plan and make any necessary changes to achieve compliance.

In February 2017, Yanacocha submitted a modification to its previously approved compliance achievement plan to the MINEM. In May 2022, Yanacocha submitted a proposed modification to this plan requesting an extension of time for coming into full compliance with the new regulations to 2027. In June 2023, Yanacocha received approval of its updated compliance plan from MINEM and was granted an extension to June 2026 to achieve compliance. The Company appealed this approval to the Mining Council requesting the regulatory extension until 2027, and in April 2024, MINEM approved the compliance schedule.

The Company currently operates five water treatment plants at Yanacocha that have been and currently meet all currently applicable water discharge requirements. The Company is conducting detailed studies to better estimate water management and other closure activities that will ensure water quality and quantity discharge requirements, including the modifications promulgated by MINAM, as referenced above, will be met. This also includes performing a comprehensive update to the Yanacocha reclamation plan to address changes in closure activities and estimated closure costs while preserving optionality for potential future projects at Yanacocha. These ongoing studies, which will extend beyond the current year, continue to evaluate and revise assumptions and estimated costs of changes to the reclamation plan. While certain estimated costs remain subject to revision, the Company's current asset retirement obligation includes plans for the construction and post-closure management of two new water treatment plants and initial consideration of known risks (including the associated risk that these water treatment estimates could change in the future as more work is completed). The ultimate construction costs of the two water treatment plants remain uncertain as ongoing study work and assessment of opportunities that incorporates the latest design considerations remain in progress. These and other additional risks and contingencies that are the subject of ongoing studies, including, but not limited to, a comprehensive review of the Company's tailings storage facility management, review of Yanacocha's water balance and storm water management system, and review of post-closure management costs, could result in future material increases to the reclamation obligation at Yanacocha.

Cripple Creek & Victor Gold Mining Company LLC - 100% Newmont Owned

In December 2021, Cripple Creek & Victor Gold Mining Company LLC ("CC&V", a wholly-owned subsidiary of the Company) entered into a Settlement Agreement ("Settlement Agreement") with the Water Quality Control Division of the Colorado Department of Public Health and Environment (the "Division") with a mutual objective of resolving issues associated with the new discharge permits issued by the Division in January 2021 for the Carlton Tunnel. The Carlton Tunnel was a historic tunnel completed in 1941 with the purpose of draining the southern portion of the mining district, subsequently consolidated by CC&V. CC&V has held discharge permits for the Carlton Tunnel since 1983, primarily to focus on monitoring, with the monitoring data accumulated since the mid-1970s indicating consistency in the water quality discharged from the Carlton Tunnel over time. In 2006, legal proceedings and work with the regulator confirmed that the water flowing out of the Carlton Tunnel portal is akin to natural spring water and did not constitute mine drainage. However, this changed with the January 2021 permit updates, when the regulator imposed new water quality limits. The Settlement Agreement involves the evaluation of a reasonable and achievable timeline for treatment and permit compliance, acknowledging the lack of readily available technology, and the need to spend three years to study and select the technological solution, with three additional years to construct, bringing full permit compliance to the November 2027 timeframe. In 2022, the Company studied various interim passive water treatment options, reported the study results to the Division, and based on an evaluation of additional semi-passive options that involve the usage of power at the portal, updated the remediation liability to \$20 in 2022. CC&V continues to study alternative long-term remediation plans for water discharged from the Carlton Tunnel, and is also working with regulators on the Discharger Specific Variance ("DSV") to identify highest feasible alternative treatment in the context, based on limits such as area topography. CC&V formally submitted its proposal for the DSV and the matter will be presented to the

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

Water Quality Control Commission for June 2025 rulemaking hearing. Depending on the outcome of the hearing and the plans that may ultimately be agreed with the Division, a material adjustment to the remediation liability may be required.

In July 2024, CC&V received a notice from the Colorado Division of Reclamation Mining and Safety ("DRMS") citing it has reason to believe a violation existed with respect to reporting of monitoring data for mine impacted water at the mine's East Cresson Overburden Storage Area ("ECOSA"). The Company and the DRMS reached a favorable Stipulated Agreement, which was submitted to the Mined Land Reclamation Board during the fourth quarter of 2024 and incorporated into an order of the Board.

Dawn Mining Company LLC ("Dawn") - 58.19% Newmont Owned

Midnite mine site and Dawn mill site. Dawn previously leased an open pit uranium mine, currently inactive, on the Spokane Indian Reservation in the State of Washington. The mine site is subject to regulation by agencies of the U.S. Department of Interior (the Bureau of Indian Affairs and the Bureau of Land Management), as well as the EPA.

As per the Consent Decree approved by the U.S. District Court for the Eastern District of Washington on January 17, 2012, the following actions were required of Newmont, Dawn, the Department of the Interior and the EPA: (i) Newmont and Dawn would design, construct and implement the cleanup plan selected by the EPA in 2006 for the Midnite mine site; (ii) Newmont and Dawn would reimburse the EPA for its past costs associated with overseeing the work; (iii) the Department of the Interior would contribute a lump sum amount toward past EPA costs and future costs related to the cleanup of the Midnite mine site; (iv) Newmont and Dawn would be responsible for all future EPA oversight costs and Midnite mine site cleanup costs; and (v) Newmont would post a surety bond for work at the site.

During 2012, the Department of Interior contributed its share of past EPA costs and future costs related to the cleanup of the Midnite mine site. In 2016, Newmont completed the remedial design process, with the exception of the new WTP design which was awaiting the approval of the new NPDES permit. Subsequently, the new NPDES permit was received in 2017 and the WTP design commenced in 2018. The EPA approved the WTP design in 2021. Construction of the effluent pipeline began in 2021, and construction of the new WTP began in 2022. The WTP is projected to be completed in the first quarter of 2025. Forest fires and droughts in the Pacific Northwest delayed the completion of the effluent pipeline until early 2025.

The Dawn mill site is regulated by the Washington Department of Health (the "WDOH") and is in the process of being closed in accordance with the federal Uranium Mill Tailings Radiation Control Act, and associated Washington state regulations. Remediation at the Dawn mill site began in 2013. The Tailing Disposal Area 1-4 reclamation earthworks component was completed during 2017 with the embankment erosion protection completed in the second quarter of 2018. The remaining closure activities consist primarily of finalizing an Alternative Concentration Limit application (the "ACL application") submitted in 2020 to the WDOH to address groundwater issues, and also evaporating the remaining balance of process water at the site. In the fourth quarter of 2022, the WDOH provided comments on the ACL application, which Newmont is evaluating and conducting studies to better understand and respond to the comments provided by the WDOH. These studies and the related comment process will extend beyond the current year and could result in future material increases to the remediation obligation.

The remediation liability for the Midnite mine site and Dawn mill site is approximately \$168, assumed 100% by Newmont, at December 31, 2024.

Goldcorp Canada Ltd. - 100% Newmont Owned

Porcupine mine site. The Porcupine complex is comprised of active open pit and underground mining operations as well as inactive, legacy sites from its extensive history of mining gold in and around the city of Timmins, Ontario since the early 1900s. As a result of these primarily historic mining activities, there are mine hazards in the area that could require some form of reclamation. The Company is conducting studies to better catalog, prioritize, and update its existing information of these historical mine hazards, to inform its closure plans and estimated closure costs. Based on work performed during 2023, a \$46 reclamation adjustment was recorded at December 31, 2023, however, on-going studies will extend beyond the current year and could result in future material increases to the reclamation obligation at Porcupine.

Cadia Holdings Pty Ltd. - 100% Newmont Owned

Cadia mine site. Cadia Holdings Pty Ltd. ("Cadia Holdings") is a wholly owned subsidiary of Newcrest, which was acquired by Newmont in November 2023. The mine site is subject to regulations by the New South Wales Environment Protection Authority (the "NSW EPA"). During the quarter ended June 2023, the NSW EPA issued variations to its Environment Protection License ("EPL"), a Prevention Notice and Notices to Provide Information regarding the management of, and investigation into potential breaches relating to, dust emissions and other air pollutants from Cadia Holdings' tailings storage facilities and ventilation rises. The license variations largely formalized the actions Cadia Holdings had developed in consultation with the NSW EPA and was already undertaking across a range of measures. Cadia Holdings received a letter from the NSW EPA in June 2023 requiring it to immediately comply with specific statutory requirements and EPL conditions. Adjustments were implemented underground, including a reduction in mining rates, modifications to the ventilation circuit and the installation of additional dust sprays and spray curtains. Additional dust collection units were subsequently installed, enabling normal mining rates to be restored.

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

In August 2023, the NSW EPA commenced proceedings in the Land and Environment Court of NSW (the "NSW Land and Environment Court") against Cadia Holdings, alleging that air emissions from Cadia on or about March 1, 2022 exceeded the standard of concentration for total solid particles permitted under applicable laws due to the use of surface exhaust fans at the mine. On September 29, 2023, Cadia Holdings entered a plea of guilty and the NSW Land and Environment Court listed the case for a sentencing hearing on June 21, 2024. On October 13, 2023, the NSW EPA commenced additional proceedings in the NSW Land and Environment Court against Cadia Holdings, alleging two additional contraventions of applicable air emissions requirements between November 3 and 5, 2021 and May 24 and 25, 2023 and two contraventions related to alleged air pollution from tailings storage facilities on October 13 and 31, 2022. On November 24, 2023, Cadia Holdings entered a plea of guilty to the two additional charges relating to applicable air emissions requirements and the sentencing hearing took place before the NSW Land and Environment Court on June 21, 2024. The matter has been adjourned pending the delivery of the judgment. On October 18, 2024, Cadia Holdings entered a plea of not guilty to the proceedings related to alleged air pollution from Cadia Holdings' tailings storage facilities. The proceedings have been adjourned for further directions on February 21, 2025. The NSW EPA's investigation regarding the management of air emissions from the mine is ongoing.

While no specific relief has been sought by the NSW EPA in its proceedings against Cadia Holdings before the NSW Land and Environment Court, the court can impose penalties.

Other Legal Matters

Newmont Corporation, as well as Newmont Canada Corporation, and Newmont Canada FN Holdings ULC – 100% Newmont Owned

Kirkland Lake Gold Inc., which was acquired by Agnico Eagle Mines Limited in 2022 (still referred to herein as "Kirkland" for ease of reference), owns certain mining and mineral rights in northeastern Ontario, Canada, referred to here as the Holt-McDermott property, on which it suspended operations in April 2020. A subsidiary of the Company has a retained royalty obligation ("Holt royalty obligation") to Royal Gold, Inc. ("Royal Gold") for production on the Holt-McDermott property. In August 2020, the Company and Kirkland signed a Strategic Alliance Agreement (the "Kirkland Agreement"). As part of the Kirkland Agreement, the Company purchased an option (the "Holt option") for \$75 from Kirkland for the mining and mineral rights subject to the Holt royalty obligation. The Company has the right to exercise the Holt option and acquire ownership to the mineral interests subject to the Holt royalty obligation in the event Kirkland intends to resume operations and process material subject to the obligation. Kirkland has the right to assume the Company's Holt royalty obligation at any time, in which case the Holt option would terminate.

On August 16, 2021, International Royalty Corporation ("IRC"), a wholly-owned subsidiary of Royal Gold, filed an action in the Supreme Court of Nova Scotia against Newmont Corporation, Newmont Canada Corporation, Newmont Canada FN Holdings ULC (collectively "Newmont"), and certain Kirkland defendants (collectively "Kirkland"). IRC alleges the Kirkland Agreement is oppressive to the interests of Royal Gold under the Nova Scotia Companies Act and the Canada Business Corporations Act, and that, by entering into the Kirkland Agreement, Newmont breached its contractual obligations to Royal Gold. IRC seeks declaratory relief, and \$350 in alleged royalty payments that it claims Newmont expected to pay under the Holt royalty obligation, but for the Kirkland Agreement. Kirkland filed a motion seeking dismissal of the case against it, which the court granted in October 2022. Newmont submitted its statement of defense on February 27, 2023, and a motion for summary judgment on January 12, 2024. The motion for summary judgment was denied on May 27, 2024. Newmont intends to vigorously defend this matter but cannot reasonably predict the outcome.

Newmont Ghana Gold Limited and Newmont Golden Ridge Limited - 100% Newmont Owned

On December 24, 2018, two individual plaintiffs, who are members of the Ghana Parliament ("Plaintiffs"), filed a writ to invoke the original jurisdiction of the Supreme Court of Ghana. On January 16, 2019, Plaintiffs filed the Statement of Plaintiff's Case outlining the details of the Plaintiff's case and subsequently served Newmont Ghana Gold Limited ("NGGL") and Newmont Golden Ridge Limited ("NGRL") along with the other named defendants, the Attorney General of Ghana, the Minerals Commission of Ghana and 33 other mining companies with interests in Ghana. The Plaintiffs allege that under article 268 of the 1992 Constitution of Ghana, the mining company defendants are not entitled to carry out any exploitation of minerals or other natural resources in Ghana, unless their respective transactions, contracts or concessions are ratified or exempted from ratification by the Parliament of Ghana. Newmont's current mining leases are both ratified by Parliament; NGGL June 13, 2001 mining lease, ratified by Parliament on October 21, 2008, and NGRL January 19, 2010 mining lease; ratified by Parliament on December 3, 2015. The writ alleges that any mineral exploitation prior to Parliamentary ratification is unconstitutional. The Plaintiffs seek several remedies including: (i) a declaration as to the meaning of constitutional language at issue; (ii) an injunction precluding exploitation of minerals for any mining company without prior Parliamentary ratification; (iii) a declaration that all revenue as a result of violation of the Constitution shall be accounted for and recovered via cash equivalent; and (iv) an order that the Attorney General and Minerals Commission submit all un-ratified mining leases, undertakings or contracts to Parliament for ratification. Newmont intends to vigorously defend this matter, but cannot reasonably predict the outcome.

Newmont Capital Limited and Newmont Canada FN Holdings ULC – 100% Newmont Owned

The Australian Taxation Office ("ATO") is conducting a limited review of the Company's prior year tax returns. The ATO is reviewing an internal reorganization executed in 2011 when Newmont completed a restructure of the shareholding in the Company's Australian subsidiaries. To date, the Company has responded to inquiries from the ATO and provided them with supporting

NEWMONT CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(dollars in millions, except per share, per ounce and per pound amounts)

documentation for the transaction and the Company's associated tax positions. One aspect of the ATO review relates to an Australian capital gains tax that applies to sales or transfers of stock in certain types of entities. In the fourth quarter of 2017, the ATO notified the Company that it believed the 2011 reorganization was subject to capital gains tax of approximately \$85 (including interest and penalties). The Company disputed this conclusion and is vigorously defending its position that the transaction is not subject to this tax. In the fourth quarter of 2017, the Company made a \$24 payment to the ATO and lodged an appeal with the Australian Federal Court. The court proceedings were held during the third quarter of 2024 and the Company is currently awaiting the judgment, which is expected during the second quarter of 2025. The Company cannot reasonably predict the outcome.

Newmont Corporation and Goldcorp Canada Ltd. – 100% Newmont Owned

On November 20, 2024, Taykwa Tagamou Nation ("TTN") filed a Statement of Claim in the Ontario Superior Court of Justice against the Ontario government, as well as Newmont Corporation and Goldcorp Canada Ltd. (collectively "Newmont"), alleging that the resumption of open pit mining at the Pamour mine in Timmins, Ontario, Canada would be without proper consultation or consideration of the cumulative impacts of TTN's traditional territory and Aboriginal rights, and as such, the associated environmental permits previously issued by the Ontario government with respect to Pamour ought to be revoked. TTN is seeking, amongst other things: (i) a stay of all activities authorized under the permits until the case is resolved, (ii) a declaration that Ontario breached its duty to consult and violated Treaty No. 9, and section 35 of the Constitution Act (Canada) 1982, and (iii) general and aggravated damages. Newmont remains steadfast in its commitment to foster meaningful and productive relationships with First Nation communities in Canada, and had undertaken appropriate consultations with various community stakeholders, including TTN and other First Nation groups in the Timmins area – as such, the permits were properly issued by the government. Newmont intends to vigorously defend this matter, but cannot reasonably predict the outcome.

Newmont Corporation

On January 31, 2025, a putative class action lawsuit was filed against Newmont and Newmont's Chief Executive Officer, Chief Operating Officer and Chief Financial Officer in the United States District Court for the District of Colorado. The action was brought on behalf of an alleged class of Newmont stockholders who owned stock between February 22, 2024 and October 23, 2024 (the alleged class period). Plaintiffs allege that the defendants made a series of materially false and misleading statements and/or omissions during the alleged class period regarding the Company's projected revenue outlook and ability to deliver higher grades of gold and mineral production in violation of federal securities laws. Plaintiffs further allege that the purported class members suffered losses and damages resulting from declines in the market value of Newmont's common stock after the Company announced its third quarter 2024 results and updated guidance on October 23, 2024. Plaintiffs seek unspecified monetary damages and other relief. Newmont intends to vigorously defend this matter, but cannot reasonably predict the outcome.

Other Commitments and Contingencies

As part of its ongoing business and operations, the Company and its affiliates are required to provide surety bonds, bank letters of credit and bank guarantees as financial support for various purposes, including environmental remediation, reclamation, exploration permitting, workers compensation programs and other general corporate purposes. At December 31, 2024 and 2023, there were \$2,086 and \$2,123, respectively, of outstanding letters of credit, surety bonds and bank guarantees. The obligations associated with these instruments are generally related to performance requirements that the Company addresses through its ongoing operations. As the specific requirements are met, the beneficiary of the associated instrument cancels and/or returns the instrument to the issuing entity. Certain of these instruments are associated with operating sites with long-lived assets and will remain outstanding until closure. Generally, bonding requirements associated with environmental regulation are becoming more restrictive. However, the Company believes it is in compliance with all applicable bonding obligations and will be able to satisfy future bonding requirements through existing or alternative means, as they arise.

Newmont is from time to time involved in various legal proceedings related to its business. Except in the above described proceedings, management does not believe that adverse decisions in any pending or threatened proceeding or that amounts that may be required to be paid by reason thereof will have a material adverse effect on the Company's financial condition or results of operations.

In connection with the Company's investment in Galore Creek, Newmont will owe NovaGold Resources Inc. \$75 upon the earlier of approval to construct a mine, mill and all related infrastructure for the Galore Creek project or the initiation of construction of a mine, mill or related infrastructure. The amount due is non-interest bearing. The decision for an approval and commencement of construction is contingent on the results of a prefeasibility study which is currently under way and feasibility study which has not yet occurred.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

The Company's management, with the participation of the Chief Executive Officer and Chief Financial Officer of the Company, carried out an evaluation of the effectiveness of the design and operation of the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended (the "Exchange Act")) as of December 31, 2024, the end of the period covered by this report. Based on such evaluation, the Company's Chief Executive Officer and Chief Financial Officer have concluded that, as of December 31, 2024, the Company's disclosure controls and procedures are effective to ensure that information required to be disclosed by the Company in reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the required time periods and are designed to ensure that information required to be disclosed in its reports is accumulated and communicated to the Company's management, including the Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Management's Report on Internal Control over Financial Reporting

The management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Company's principal executive and principal financial officers and effected by the Company's Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

The Company's management assessed the effectiveness of the Company's internal control over financial reporting at December 31, 2024. In making this assessment, the Company's management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control-Integrated Framework 2013. Based upon its assessment, management concluded that, at December 31, 2024, the Company's internal control over financial reporting was effective.

As permitted by the SEC Staff interpretive guidance for proportionately consolidated entities, the Company's management excluded NGM from its assessment of internal control over financial reporting at December 31, 2024, as management does not have the ability to dictate, modify or assess the controls at NGM. The Company has implemented internal controls over financial reporting for recognizing its proportionate share of the assets, liabilities, and operations of NGM. Refer to Item 8 "Financial Statements and Supplementary Data" for NGM's "Report of Independent Registered Public Accounting Firm" for Opinion on the Financial Statements and Internal Controls over Financial Reporting.

NGM represented 13% of the Company's consolidated *Total assets* at December 31, 2024, while its *Sales* comprised 13% of the Company's consolidated sales and its *Net income attributable to Newmont stockholders* comprised 20% of the Company's net income for the year ended December 31, 2024.

Ernst & Young LLP, an independent registered public accounting firm that audited the consolidated financial statements of the Company included in this Annual Report on Form 10-K, has issued an attestation report on the effectiveness of the Company's internal control over financial reporting as of December 31, 2024. The report, which expresses an unqualified opinion on the effectiveness of the Company's internal control over financial reporting as of December 31, 2024, is included in this Item under the heading "Report of Independent Registered Public Accounting Firm."

Changes in Internal Controls

Subject to the above, there were no changes in the Company's internal control over financial reporting that occurred during the quarter ended December 31, 2024, that have materially affected, or are reasonably likely to materially affect, our internal controls over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Stockholders and Board of Directors of Newmont Corporation

Opinion on Internal Control Over Financial Reporting

We have audited Newmont Corporation's (the Company) internal control over financial reporting as of December 31, 2024, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) (the COSO criteria). In our opinion, based on our audit and the report of PricewaterhouseCoopers LLP, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2024, based on the COSO criteria.

We did not audit the effectiveness of internal control over financial reporting of Nevada Gold Mines LLC, a 38.5% owned investment which is proportionately consolidated, whose financial statements reflect total assets constituting 13% of consolidated assets as of December 31, 2024 and sales constituting 13% of consolidated sales for the year ended December 31, 2024. The effectiveness of Nevada Gold Mines LLC's internal control over financial reporting was audited by PricewaterhouseCoopers LLP, whose report has been furnished to us, and our opinion, insofar as it relates to the effectiveness of Nevada Gold Mines LLC's internal control over financial reporting, is based solely on the report of PricewaterhouseCoopers LLP.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of the Company as of December 31, 2024 and 2023, the related consolidated statements of operations, comprehensive income (loss), changes in equity and cash flows for each of the three years in the period ended December 31, 2024, the related notes and financial statement schedule in Item 15(a)(2), and our report dated February 20, 2025 expressed an unqualified opinion thereon, based on our audit and the report of PricewaterhouseCoopers LLP.

Basis for Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit and the report PricewaterhouseCoopers LLP provide a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

/s/ Ernst & Young LLP

Denver, Colorado

February 20, 2025

ITEM 9B. OTHER INFORMATION

(a) Disclosure Pursuant to Item 5.03 of Form 8-K. Amendments to Articles of Incorporation or Bylaws

On February 19, 2025, the Board of Directors amended and restated the Company's By-Laws (the "Amended and Restated By-Laws"). The Amended and Restated By-Laws became effective as of February 19, 2025. Among other changes, the Amended and Restated By-Laws (i) address certain matters related to Rule 14a-19 under the Exchange Act and clarify certain disclosure requirements in Article I, Section 4 (Notice of Stockholder Business and Nominations), Section 4A (Inclusion of Stockholder Director Nominations in the Corporation's Proxy Materials) and Section 4B (Submission of Questionnaire, Representation and Agreement); (ii) modify Article I, Section 7 to align more closely with the Delaware General Corporation Law ("DGCL") and current practices regarding access to stockholder lists and provisions relating to stockholder meetings held by remote communication; (iii) clarify the roles of the Chief Accounting Officer and Controller; and (iv) establish the state courts of the state of Delaware (or, if such court does not have subject matter jurisdiction, the federal court for the District of Delaware) as the exclusive forum for specified actions relating to the Company, including derivative actions, actions asserting claims based on breach of fiduciary duties, actions asserting claims pursuant to the any provision of the DGCL, the Company's Second Amended and Restated Certificate of Incorporation, or the Company's Amended and Restated By-Laws, and actions asserting claims governed by the internal affairs doctrine or asserting an "internal corporate claim" as defined in Section 115 of the DGCL. The Amended and Restated By-Laws also make clarifications, updates and other, non-substantive changes. This description of the amendments to the Amended and Restated By-Laws is qualified in its entirety by reference to the text of the Amended and Restated By-Laws filed as Exhibit 3.2 to this Annual Report on Form 10-K.

(b) Rule 10b5-1 Trading Plans

Our directors and executive officers may purchase or sell shares of our common stock in the market from time to time, including pursuant to equity trading plans adopted in accordance with Rule 10b5-1 under the Exchange Act and in compliance with guidelines specified by the Company's stock trading standard, which has been filed as Exhibit 19 to this annual report. In accordance with Rule 10b5-1 and the Company's insider trading policy, directors, officers and certain employees who, at such time, are not in possession of material non-public information about the Company are permitted to enter into written plans that pre-establish amounts, prices and dates (or formula for determining the amounts, prices and dates) of future purchases or sales of the Company's stock, including shares acquired pursuant to the Company's employee and director equity plans (a "Rule 10b5-1 Trading Plan"). Under the Company's stock trading standard, the first trade made pursuant to a Rule 10b5-1 trading plan may take place no earlier than 90 days after adoption of the trading plan. Under a Rule 10b5-1 trading plan, a broker executes trades pursuant to parameters established by the director or executive officer when entering into the plan, without further direction from them. The use of these trading plans permits asset diversification as well as financial and tax planning. Our directors and executive officers also may buy or sell additional shares outside of a Rule 10b5-1 plan when they are not in possession of material nonpublic information, subject to compliance with SEC rules, the terms of our stock trading standard and holding requirements. During the three months ended December 31, 2024, the following directors and executive officers adopted or terminated Rule 10b5-1 trading plans intended to satisfy the affirmative defense conditions of Rule 10b5-1(c):

On December 16, 2024, Tom Palmer, President, Chief Executive Officer and Director, terminated a trading arrangement previously adopted with respect to the sale of securities of the Company's common stock. Mr. Palmer's Rule 10b5-1 Trading Plan was adopted on March 28, 2024, had a term of 11 months, and provided for the sale of up to 104,000 shares of common stock pursuant to the terms of the plan. As of the date of termination of the Rule 10b5-1 Trading Plan, Mr. Palmer had sold 99,000 shares of common stock under its terms. The adoption of such 10b5-1 Trading Plan, and its subsequent termination, each occurred during an open insider trading window and complied with the Company's standards on insider trading.

Transactions under Section 16 officer trading plans will be disclosed publicly through Form 144 and Form 4 filings with the SEC to the extent required by law. No other Section 16 director or officer of the Company adopted, modified, or terminated Rule 10b5-1 trading plans during the covered period. No non-Rule 10b5-1 trading arrangements (as defined by Item 408(a) of Regulation S-K) were entered into by Section 16 director or officer of the Company during the covered period.

ITEM 9C. DISCLOSURE REGARDING FOREIGN JURISDICTIONS THAT PREVENT INSPECTIONS

Not applicable.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

Information concerning Newmont's executive officers, as of December 31, 2024, is set forth below:

Name	Age	Office
Thomas R. Palmer	57	President and Chief Executive Officer
Natascha Viljoen	54	Executive Vice President and Chief Operating Officer
Karyn F. Ovelmen	61	Executive Vice President and Chief Financial Officer
Peter Toth	55	Executive Vice President and Chief Development Officer
Francois Hardy	53	Executive Vice President and Chief Technology Officer
Peter Wexler	57	Executive Vice President and Chief Legal Officer
Jennifer Cmil	54	Executive Vice President and Chief People Officer
Brian Tabolt	43	Senior Vice President, Global Finance and Chief Accounting Officer

There are no family relationships by blood, marriage or adoption among any of the above executive officers or members of the Board of Directors of Newmont. Each executive officer is elected annually by the Board of Directors of Newmont to serve for one year or until his or her respective successor is elected and qualified. There is no arrangement or understanding between any of the above executive officers and any other person pursuant to which he or she was selected as an executive officer.

Mr. Palmer was first elected as President and Chief Executive Officer and a member of the Board of Directors in October 2019. He served as President since June 2019 and as President and Chief Operating Officer from November 2018 until June 2019. Previously, he served as Executive Vice President and Chief Operating Officer since May 2016. Mr. Palmer was elected Senior Vice President, Asia Pacific in February 2015 after serving as Senior Vice President, Indonesia since March 2014. Prior to joining Newmont, he was the Chief Operating Officer, Pilbara Mines at Rio Tinto Iron Ore. Over a 20-year career with Rio Tinto, Mr. Palmer worked in a variety of roles across a number of commodities, including General Manager, Technology for the Bauxite and Alumina business; General Manager, Operations at Hail Creek coal mine; and General Manager, Asset Management at Palabora Mining Company in South Africa.

Ms. Viljoen joined Newmont's Executive Leadership Team in October 2023 as Executive Vice President and Chief Operating Officer. Prior to joining Newmont, Ms. Viljoen served as Chief Executive Officer of Anglo American's platinum business in South Africa since 2020, having previously held a series of operating and technical positions within the organization, including as Group Head of Processing. Prior to joining Anglo American, she spent six years at Lonmin, where she served on the executive committee as Executive Vice President of Processing, also with responsibility for several wider corporate functions, including sustainability.

Ms. Ovelmen joined Newmont in May 2023 as Executive Vice President and Chief Financial Officer. Ms. Ovelmen has over 30 years of financial, accounting and operating experience across the energy, manufacturing and distribution industries, including over 12 years in Chief Financial Officer roles. Most recently, Ms. Ovelmen has served as a non-executive and independent director of Hess Corporation since November 2020, including as a member of the Audit Committee, and as a non-executive and independent director of ArcelorMittal since May 2015, including as lead independent director, chair of the Audit & Risk Committee and chair of the Appointment Remuneration and Corporate Governance Committee. From January 2019 to December 2019, Ms. Ovelmen was the Gas Power Transformation Leader for the General Electric Company. Ms. Ovelmen served on the Board of Gates Industrial Corporation plc. as a non-executive director and was a member of their Audit Committee from December 2017 to March 2019. She previously served as Executive Vice President and Chief Financial Officer of Flowserve from June 2015 to February 2017, Chief Financial Officer and Executive Vice President of LyondellBasell Industries NV from 2011 to May 2015, Executive Vice President and Chief Financial Officer of Petroplus Holdings AG from May 2006 to September 2010 and Executive Vice President and Chief Financial Officer of Argus Services Corporation from 2005 to 2006. Prior to that, she was Vice President of External Reporting and Investor Relations for Premcor Refining Group Inc. She also spent 12 years with PricewaterhouseCoopers, primarily serving energy industry accounts, as a Certified Public Accountant.

Mr. Toth was promoted to Executive Vice President and Chief Development Officer in June 2023. Mr. Toth joined Newmont in July 2022 as Executive Vice President, Strategic Development and his role was expanded to include Sustainability in September of 2022 to become Executive Vice President and Chief Strategy and Sustainability Officer. Prior to joining Newmont, Mr. Toth worked at Rio Tinto from April 2014, with his last role being Group Executive, Strategy and Development, with accountability for business development/M&A, strategic partnerships, climate and sustainability strategy, closure, and exploration. Mr. Toth has more than 25 years of leadership experience working in the resources industry across various commodities. Mr. Toth has held senior strategic, commercial, and operational roles across Europe, Singapore, Australia and the United Kingdom with Rio Tinto, BHP, and OM Holdings.

Mr. Hardy was promoted to Chief Technology Officer in May 2024, after previously serving as Group Head, Mineral Resource Management since May 2023. Prior to this role he served as Senior Vice President, Exploration since February 2022. Prior to this role he served as Regional Senior Vice President, Africa since April 2019. Prior to that he served as Regional Project Director for Newmont Australia and as the General Manager of Tanami gold mine where he led a team responsible for improving the operation into a Tier 1 asset. He joined Newmont in May 2002 and over his tenure has held a number of roles in Global Program Management, Business

Excellence, Technical Services and Senior Site Leadership roles at several Newmont assets in Australia. Prior to Newmont, Francois held positions at Avmin Ltd, De Beers Consolidated Mines and Anglovaal Ltd. Francois holds a Bachelor's degree in Mine Engineering, a National Higher Diploma in Metalliferous Mining from the University of Johannesburg as well as Management Certificate of Competencies for Western Australia and South Africa.

Mr. Wexler joined Newmont in March 2024 as Executive Vice President and Chief Legal Officer. Mr. Wexler is a seasoned legal and risk management leader with more than three decades of international experience, including managing legal, risk, compliance, M&A, antitrust, litigation and corporate governance affairs within the industrial, technology, energy management, engineering, manufacturing and construction sectors. Before joining Newmont, he served as Chief Legal Officer at Schneider Electric, a Global 500 business, for 15 years. Prior to that, Mr. Wexler served as in-house counsel overseeing legal, risk and compliance at various companies, including American Power Conversion Corporation. Mr. Wexler holds a J.D. from American University Washington College of Law and a B.A. in History and Political Science from the University of Vermont.

Ms. Cmil is Executive Vice President and Chief People Officer of Newmont, positions she has held since October 2019. Ms. Cmil first joined Newmont in 2010 as Senior Director, Human Resources. Prior to joining Newmont, Ms. Cmil held leadership positions in human resources across multiple industries, including Vice President of Human Resources at Level 3 Telecommunications, Senior Human Resources Director at KB Home and Human Resources Partner at Sun Microsystems, where she began her career in 1994.

Mr. Tabolt was appointed to Senior Vice President, Global Finance and Chief Accounting Officer in December 2024. Mr. Tabolt held a strategic leadership role as Group Head, Financial Planning and Analysis since May 2023. Prior to that, Mr. Tabolt was elected Interim Chief Financial Officer in November 2022 after having served as Vice President, Controller and Chief Accounting Officer since May 2021. Before joining Newmont Corporation, Mr. Tabolt served as Molson Coors Beverage Company's Vice President, Controller and Chief Accounting Officer since 2014 and held other senior management roles within Molson Coors' Accounting function, including as Senior Director of SEC Reporting and Technical Accounting and Senior Manager Technical Accounting. Mr. Tabolt began his career in public accounting with Deloitte, holds Bachelor and Master of Science degrees in Accounting from Pennsylvania State University and is a Certified Public Accountant.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

Equity Compensation Plan Information

The following table sets forth at December 31, 2024 information regarding Newmont's Common Stock that may be issued under Newmont's equity compensation plans:

Plan Category	Number of Securities to be issued upon exercise of outstanding options, warrants and rights (a)	Weighted average exercise price of outstanding options, warrants and rights (b) ⁽¹⁾	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by security holders ⁽²⁾	4,920,183	N/A	18,993,357 ⁽³⁾
Equity compensation plans not approved by security holders	—	N/A	—

⁽¹⁾ The weighted average exercise price does not take into account the shares issuable upon vesting of restricted stock units, performance leveraged stock units.

⁽²⁾ Newmont's 2020 Stock Incentive Plan was approved by the stockholders on April 21, 2020. A maximum of 20,000,000 shares of Newmont's Common Stock, plus up to 3,644,782 shares available for grant under the 2013 Incentive Plan as of May 1, 2020, were authorized to be issued under the 2013 Stock Incentive Plan at that time. There are currently 18,993,357 shares registered and available to grant under the 2020 Stock Incentive Plan. There are no equity compensation plans not approved by stockholders.

⁽³⁾ Securities remaining available for future issuance under the 2020 Stock Incentive Plan. No additional grants or awards will be made under any of the Company's other plans.

The information required by Item 403 of Regulation S-K and contained under the heading "Beneficial Ownership of Common Stock" in the 2025 Proxy Statement is incorporated by reference into this annual report on Form 10-K.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

* Representation of return is based on \$100 invested on 12/31/19 in stock or index, including reinvestment of dividends. Subsequent fiscal year end 12/31. Peer Group includes AEM, AU, FCX, GFI, GOLD, NST and KGC. Gold price reflects LBMA gold price which is included for reference as Newmont is primarily a gold producer and share price performance is highly correlated to gold price.

** See the Risk Factors section in the Form 10-K under the heading "Holders of our common stock, CDIs and PDIs may not receive dividends."
