Successful in Developing New Business, Maintain "Buy"

新业务拓展顺利,维持"买入"评级

- We maintain "Buy" investment rating for Xingfa Aluminium (the "Company") with a TP of HK\$11.73. The TP corresponds to 4.9x/ 3.7x/ 2.9x 2023-2025 PER.
- We expect sales of aluminum extrusion products for new energy vehicles of Xingfa Aluminium to record fast growth in 2023. The penetration rate of China's new energy vehicles is accelerating from 2023 and new energy vehicles accounted 29.3% of total passenger vehicle output in the 1st quarter of 2023. We expect sales of aluminum extrusion products for new energy vehicles of the Company to benefit greatly from the fast development of the new energy vehicle industry and expect it to be the main source of growth for the Company in the next 3 years.
- We believe the competitive advantages of Xingfa Aluminium have been underestimated by investors. The Company has shown great competitive advantages in cost control and marketing, which are the main reasons why sales of aluminum extrusion products for construction still recorded growth under unfavorable conditions. We believe the growth prospects of the Company remain good.
- Catalysts: Fast sales growth of new energy vehicles; recovery of domestic property market.
- Risks: Development of aluminum extrusion products for vehicles may miss expectation; fierce competition from other aluminum extrusion producers; domestic property market may remain weak.
- 我们维持兴发铝业("公司") "买入"的投资评级及 11.73 港元的目标价。我们的目标价相当于 4.9 倍/3.7 倍/2.9 倍 2023 年至 2025 年市盈率。
- 我们预计兴发铝业的新能源汽车铝挤压材销量在 2023 年将录得快速增长。中国新能源汽车的渗透率在 2023 年开始加速, 2023 年一季度新能源汽车产量已经占乘用车总产量的 29.3%。 我们预计公司新能源汽车用铝挤压材的销售将极大受益于新能源汽车行业的快速发展并成 为公司未来三年主要的增长来源。
- 我们认为兴发铝业的竞争优势被投资者低估。公司在成本控制和营销方面已显示出巨大的竞争优势,这是公司建筑铝挤压材的销售在不利的环境下仍然录得增长的主要原因。我们相信公司的增长前景依旧良好。
- 催化剂:新能源汽车销量的快速增长;国内房地产市场的复苏。
- 风险:车用铝挤压材的开发不及预期;其它铝挤压生产企业的激烈竞争;国内房地产市场持续疲软。

Core Investment Points

We expect sales of aluminum extrusion products for new energy vehicles to record fast growth in 2023. The penetration rate of China's new energy vehicles is accelerating from 2023 and new energy vehicles accounted for 29.3% of total passenger vehicle output in the 1st quarter of 2023. We expect sales of aluminum extrusion products for new energy vehicles to benefit greatly from the fast development of the new energy vehicle industry and expect it to be the main source of growth for the Company in the next 3 years. In 2022, Xingfa Aluminum entered into the supply chain of new energy vehicles (NEV) for the first time and had acquired several NEV customers. Xingfa Aluminium develops aluminum extrusion products for new energy vehicles and develops product types in conjunction with vehicle enterprises. Sales of aluminum extrusion products of the Company will grow with sales of new energy vehicles. The Company will keep strengthening the research and development of industrial aluminum profiles in order to better grasp market opportunities and seize market share in various segments. At the same time, the Company also increased its production capacity, and Foshan Sanshui Precision Manufacturing Base was fully put into operation in 2022.

We believe the competitive advantages of Xingfa Aluminium have been underestimated by investors. The decline in net profit in 2022 was mainly attributable to impairment loss on trade and other receivables; the operations of the Company remained stable. Total sales of aluminum extrusion products and total revenue of the Company still recorded growth while the domestic property sector was confronted with great challenges. The gross margin was only down 1.5 ppts in 2022, which fully reflected the competitive advantages of the Company. The Company had shown great competitive advantages in cost control and marketing, which are the main reasons why sales of aluminum extrusion products for construction still recorded growth under unfavorable conditions. We believe that growth prospects of the Company remain good. The decline in net profit in 2022 was temporary and the Company still holds great competitive advantages in the aluminum extrusion sector.

Catalysts

- 1. Fast sales growth of new energy vehicles.
- 2. Recovery of domestic property market.

Risk factors

1. Development of aluminum extrusion products for vehicles may miss expectations. Sales of industrial aluminum products will be the main growth driver for the Company in the next 3 years. If the development of aluminum extrusion products for new energy vehicles misses expectation, it will significantly impact net profit growth of the Company.

2. Fierce competition from other aluminum extrusion producers. The Company may be confronted with fierce competition in sales of aluminum extrusion products. Fierce competition may reduce profitability of the Company.

3. Prolonged negative impact from the domestic property market. Sales of construction aluminum products contributed more than 80% of total revenue. If the domestic property market remains weak, sales of construction aluminum products may be negatively impacted. Besides, impairment loss from trade receivables may increase if the domestic market deteriorates.

Company Report

May 202:

(00098 HK)

兴发铝业

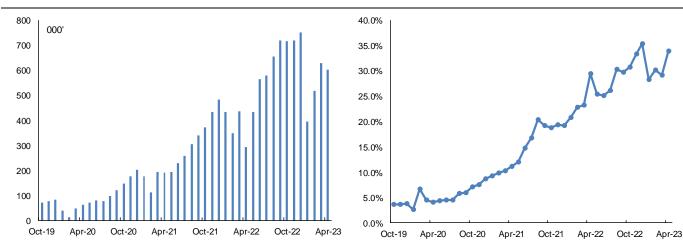

Xingfa Aluminium

Fast growth of the new energy vehicle industry will drive new demand for aluminum extrusion products

The penetration rate of China's new energy vehicles is accelerating in 2023. In the 1st quarter of 2023, China's total output of new energy vehicles increased 28.5% yoy to 1.65 million and accounted for 25.3% of total vehicle output. Output of new energy passenger vehicles increased 26.2% yoy to 1.54 million in the 1st guarter of 2023 and accounted for 29.3% of total passenger vehicle output in the 1st quarter of 2023. China is the largest new energy vehicle market in the world and total sales of new energy vehicles increased 6.7% yoy to 7.04 million in 2022. Total sales of new energy vehicles recorded fast growth in the 1st quarter of 2023 and this growth speed is expected to be maintained. More and more new passenger vehicle models have been developed and are entering the market. Besides, newly developed vehicle models are better and meet consumer needs. Industry experts expect that global sales of new energy vehicles will maintain fast growth over the next 15 years. We expect that the fast development of the new energy vehicle industry will bring more demand for aluminum products.

Source: China Association of Automobile Manufacturers, Guotai Junan International. Source: China Association of Automobile Manufacturers, Guotai Junan International

The development of the new energy vehicle industry will bring significant new demand for aluminum products. The automobile industry is a major user of industrial aluminum products such as extrusion products, flat-rolled products and foundry products. Aluminum products used in the auto industry will benefit from two aspects: firstly, higher penetration rate of new energy vehicles in the auto industry and secondly, higher amounts of aluminum products in each new energy vehicle. Average usage of aluminum products in new energy vehicles is expected to increase steadily. According to an estimation from the International Aluminum Association, average use of aluminum products in electric vehicles was 188.2 kg in 2022 and the average use of aluminum products in hybrid vehicles was 215.5 kg, much more than that of traditional vehicles. With the development of technology and the auto industry, demand for aluminum products in new energy vehicles is expected to increase steadily. The International Aluminum Association estimates that the average usage of aluminum products in electric vehicles and hybrid vehicles will be 226.8 kg and 238.3 kg in 2025, respectively. The Chinese government has also released policies to stimulate the use of aluminum products in new vehicles. According to the policy released by the central government "Energy saving and new energy vehicle industry development plan 2.0", the average usage of aluminum products in new energy vehicles will reach 250 kg in 2025 and 350 kg in 2030. We expect total sales of aluminum products to the auto industry to maintain fast growth over the next 5-10 years.

Table-1: Estimations of Aluminum Consumption per Vehicle in China

	2020A	2021A	2022F	2023F	2024F	2025F	2026F	2027F	2028F	2029F	2030F

Source: International Aluminum Association, CM Group.

Aluminum extrusion products and flat-rolled products will be in high demand due to the development of the new energy vehicle industry. About 70% of aluminum products in new energy vehicles are aluminum extrusion products and aluminum flat-rolled products. We estimate that these products will reach about 3.5 million-4.2 million tons in 2025 and more than 7.0 million tons in 2030. Although the quantity is relatively small, it is very large compared to the current quantity of extrusion products and flat-rolled products for new energy vehicles. According to China's Nonferrous Fabrication Association, China produced about 0.33 million tons of aluminum extrusion products for vehicles and 0.30 million tons of aluminum flat-rolled products to increase steadily over the next 5-10 years, which is also in line with the government's policy orientation. We believe that demand for aluminum extrusion products and flat-rolled products will be high due to the development of the new energy vehicle industry and will record significant growth over the next 5-10 years.

We expect sales of aluminum extrusion products of the Company for new energy vehicles to record fast growth in 2023-2025. In 2022, Xingfa Aluminum entered into the supply chain of new energy vehicles (NEV) for the first time, acquiring NEV customers. The Company will keep strengthening the research and development of industrial aluminum profiles in order to better grasp market opportunities and seize market share in various segments. At the same time, the Company also increased its production capacity, and Foshan Sanshui Precision Manufacturing Base was fully put into operation in 2022. We expect sales of aluminum extrusion products for new energy vehicles to benefit greatly from the fast development of the new energy vehicle industry and expect it to be the main source of growth for the Company in the next 3 years.

Significant competitive advantages of Xingfa Aluminium.

Xingfa Aluminium is a leading company in the aluminum fabrication industry. Xingfa Aluminium is one of the largest manufacturers in China's aluminum fabrication industry and a leading producer of construction aluminum products and industrial aluminum extrusion products in China. Xingfa Aluminium produces high-end construction of aluminum products and is the single largest company in the aluminum products construction industry. Xingfa Aluminium is also a leading producer of industrial aluminum extrusion products. In 2022, Xingfa Aluminium produced 0.57 million tons of construction aluminum products and 0.13 million tons of industrial aluminum extrusion products. According to a report published in a non-ferrous metals academic journal, China had more than 2,000 companies producing aluminum fabrication products in 2018 and the average output of each aluminum fabrication company was less than 20,000 tons. It is obvious that Xingfa Aluminum has great competitive advantages in production scale.

Figure-3: Sales of aluminium products

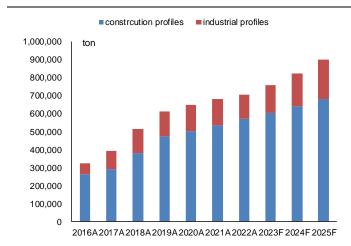

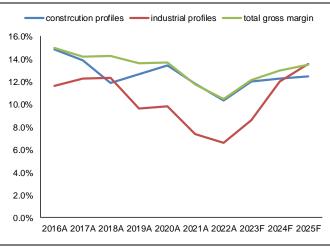

Figure-4: Gross margin of the Company

Source: the Company, Guotai Junan International.

Source: China Nonferrous Metals Fabricating Industry.

Xingfa Aluminum exhibited great competitive advantages under unfavorable conditions in 2022. Xingfa Aluminium is the largest producer of construction aluminum extrusion products and was awarded "Individual Champion Demonstration Enterprise in Manufacturing Industry" by the Chinese government. Total sales of construction aluminum products of Xingfa Aluminium maintained a 5-year CAGR of 14.4%, which increased from 0.29 million tons in 2017 to 0.57 million tons in 2022. Total sales of

industrial aluminum products of Xingfa Aluminium maintained a 5-year CAGR of 5.4%, which increased from 0.102 million tons in 2017 to 0.133 million tons in 2022. China's real estate investment declined 10% yoy in 2022, which was the first year of decline in over 10 years. As a result, upstream sectors related to the property sector were all confronted with great challenges in 2022. However, total sales of aluminum extrusion products and total revenue of the Company still recorded growth in 2022. Besides, the gross margin of the Company was only down 1.5 ppts in 2022, which fully reflected the competitive advantages of the Company. The Company showed great competitive advantages in cost control and marketing, which are the main reasons why sales of aluminum extrusion products for construction still recorded growth under unfavorable conditions.

Xingfa Aluminium has great advantages in the development and supply of aluminum extrusion products for new energy vehicles. Xingfa Aluminium has strengths in research and has a complete production chain from alloy material research, module development and product development to production and processing. The development and supply of aluminum extrusion products for new energy vehicles mainly include product development and product supply. It starts from design cooperation with automobile manufacturers. Aluminum extrusion companies design specific parts to be installed in new vehicles. Aluminum extrusion products for new energy vehicles not only have to satisfy certain shape and strength requirements, but also electric signal penetration requirements as new energy vehicles have more intelligent software and more sensors. If the development of new vehicles is successful and is brought to the market, aluminum extrusion companies will supply aluminum extrusion products to meet demand. Xingfa Aluminium has a complete industrial chain for product development and has successfully designed several aluminum extrusion products for new motorcycle types and is expected to enter into the supply stage in the coming years. Xingfa Aluminium has great advantages in the development and supply of aluminum extrusion products for new energy vehicles and we expect Xingfa Aluminium to be a leading supplier in the new energy vehicle industry in the future.
